(a) PROHIBITION ON MODIFICATION- Section 302(b) of the
Communications Act of 1934 (47 U.S.C. 302(b)) is amended by
inserting before the period at the end thereof the following:
`, or

to modify any such device, equipment, or system in any manner
that
causes such device, equipment, or system to fail to comply
with
such regulations'.
(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS-
Section 302(d) of such Act (47 U.S.C. 302(d)) is amended to
read
as follows:
`(d) The Commission shall prescribe regulations denying
equipment
authorization (under part 15 of title 47, Code of Federal
Regulations, or any other part of that title) for any scanning
receiver that is capable of--
`(1) receiving transmissions in the frequencies
allocated to
any commercial mobile service (as defined in section
332(d),
`(2) readily being altered to receive transmissions in
such
frequencies,
`(3) being equipped with decoders that convert digital
commercial mobile service transmissions to analog voice
audio, or
`(4) being equipped with devices that otherwise decode
encrypted radio transmissions for the purposes of
unauthorized
interception.'.
(c) IMPLEMENTING REGULATIONS- Within 90 days after the date
of
enactment of this Act, the Federal Communications Commission
shall
prescribe amendments to its regulations for the purposes of
implementing the amendments made by this section. In
prescribing
such amendments, and in response to subsequent changes in
technology or behavior, the Commission shall review and revise
its
definition of the term `capable of readily being altered' as
necessary to prevent commerce in devices that may be used
unlawfully to intercept or divulge radio communication.
SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF
COMMUNICATIONS.
(a) AMENDMENTS- Section 705 of the Communications Act of
1934
(47 U.S.C. 605) is amended--
(1) in the heading of such section, by inserting
`interception or' after `unauthorized';
(2) in the second sentence of subsection (a), by
striking

`and divulge' and inserting `or divulge';
(3) in subsection (e)(1)--
(A) by striking `fined not more than $2,000 or'; and
(B) by inserting `or fined under title 18, United
States
Code,' after `6 months,'; and
(4) in subsection (e)(3), by striking `any violation'
and
inserting `any receipt, interception, divulgence,
publication,
or utilization of any communication in violation'; and
(5) in subsection (e)(4), by striking `any other
activity
prohibited by subsection (a)' and inserting `any receipt,
interception, divulgence, publication, or utilization of
any
communication in violation of subsection (a)'.
(b) RESPONSIBILITY FOR ENFORCEMENT- Notwithstanding any
other
investigative or enforcement activities of any other Federal
agency, the Federal Communications Commission shall
investigate
alleged violations of section 705 of the Communications Act of
1934
(47 U.S.C. 605) and may proceed to initiate action under
section
503 of such Act (47 U.S.C. 503) to impose forfeiture penalties
with
respect to such violation upon conclusion of the Commission's
investigation.

I agree with lord nymon but some things do exist. The rights of others!...Why take something that doesn't belong to you and kill them in the process. Why disrespect others if you want respect from others and Why own slaves. The thing is that everyone who live in america has rights and certain laws serves a purpose. What one persons does affects everyone else who live here in america. Live with it friend...You don't see my bitching about laws. Especially the 14th amendment.... Do you think what you said is what Lord Nymon meant?

On my BC210XLT I have 20 and 40 ch selection. The search function works as a normal system. Once you have entered the frequencies, just hit search and it will go through them. You can also search through a range of Frequencies by selecting the limits both uper and lower. It works great. Its on 24Hrs a day.

regards
Chris

Go to your local airport and purchase a low altitude chart for IFR use. ARTCC frequencies and activity changes according to time of day. Often traffic is consolidated on certain channels. Your chart will show you the major frequencies, from which you can listen and determine where the other activity for that sector is. The chart will also help a great deal in understanding the position reports and clearances. While you're at it, consider purchase of approach plates for the area you live in. It will give you center frequencies for each airport departure, and any SID or STAR associated with that airfield. That way, you can track traffic in and out of any particular airport...

Good luck!

3670. HOT HF Freqs- USAF GHFS

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19970807143201.KAA11687@ladder01.news.aol.com>
Source record: 189279

Recently some kind REC.SCANNER user asked about HF Air Traffic Control Freqs. I suspect he was specifically asking about the ATC HF freqs used by both military and civil aviation for trans-oceanic flights. Those I'll try to adress in a later post. In answer to his question, in the absence of REC.RADIO.SHORTWAVE.UTILITIES and in the presence of today's wide-spectrum handheld receivers like the AR-1000, Yupiteru 7100/9000, Icom R-10, etc, etc, etc here are some really cool US Air Force Global HF System freqs from an almost current Flight Information Handbook (D.O.D. publication available through NOAA and at $1.50 could be the best buy on earth for HF aircraft information. It also contains a wealth of other data, such as who to telephone if you are intercepted and forced down over hostile airspace, etc , etc, etc)

If you enjoy listening to military aircraft and if your scanner will do upper-sideband mode on shortwave freqs (below 30 Mhz) you must try monitoring these frequencies. An outside longwire antenna will greatly aid reception.

USAF Global High Frequency System

Note:
-all freqs in Mhz, upper-sideband mode
-all times in GMT/CUT/Zulu time zone (It's the time zone for Greenwich England)
-check WWV-2.500, 5.000, 10.000, 15.000 Mhz for current GMT/CUT/Zulu time

For those who only want the freqs:

4.724
6.712
6.739
8.968
8.992
11.175
13.200
15.016
17.975

The US Air Force Global High Frequency System is a worldwide network of 15 high power HF stations which provide air/ground HF command and control radio communications between ground agencies and US military aircraft and ships. Allied military and other aircraft are also provided support in accordance with agreements and international protocols as appropriate. The USAF Global HF system is not dedicated to any service or command, but supports all authorized users on a traffic precedence basis. General services provided by the Global HF system are:

-General phone patch and message relay service
-HF Radio Teletype (HF RTTY) / AUTODIN and Data Support
(75 Baud, 850 Hz Shift, center freq 200 Hz, Mark=1575 Hz / Space=2425
Hz) at 8 of 14 sites
(this rarely heard on the primary frequencies and is usually encrypted
thanks to the Walkers)
-Command and Control Mission Following
-Emergency Assistance
-Emergency Action Message Broadcasts
-HF Direction Finding Assistance
-ATC support

Station Schedules:

Albrook Panama: 0001-1200 Hrs-6.739 Mhz, 24 Hours-11.175 Mhz, 1200-2400
Hrs-15.016 Mhz

Andersen AFB Guam: 0900-2000 Hrs-6.739 Mhz, 24 Hours-8.968 and 11.175 Mhz,
2000-0900 Hrs-13.200 Mhz (UHF-292.100)

Mhz, 13.200 Mhz, 15.016 Mhz, 17.976 Mhz

Hickam AFB Hawaii: 0400-1600 Hrs- 6.739 Mhz, 1600-0400 Hrs-13.200 Mhz, 24
Hrs-8.968 Mhz, 11.175 Mhz

Incirlik AFB Turkey: 24 Hrs- 4.724 Mhz, 6.739 Mhz, 11.175 Mhz, 15.016 Mhz,
17.976 Mhz

Lajes AFB Phillipenes: 24 Hrs- 6.739 Mhz, 8.968 Mhz, 15.016 Mhz
(UHF-349.400 on Request)

MacDill AFB Florida: 0001-0900 Hrs-6.739 Mhz, 0900-2400 Hrs-15.016 Mhz, 24
Hrs- 8.992 Mhz, 11.175 Mhz (UHF-292.100)

McClellan AFB California: 0400-1600 Hrs-4.724 Mhz, 6.739 Mhz, 1600-0400
Hrs- 13.200 Mhz, 15.016 Mhz, 24 Hrs- 8.968 Mhz, 11.175 Mhz, 17.976 Mhz

Offuft AFB near Omaha Nebraska USA: 2300-0800 Hrs-6.739 Mhz, 0800-2300
Hrs- 17.976 Mhz, 24 Hrs- 8.968 Mhz, 11.175 Mhz

Thule AFB Greenland: 24 Hrs- 4.724 Mhz, 6.739 Mhz, 8.968 Mhz, 13.200 Mhz
(UHF-292.100)

Yokota AFB Japan: 1000-2100 Hrs- 4.724 Mhz, 6.739 Mhz, 2100-1000 Hrs- 13.200 Mhz and 15.016 Mhz, 24 Hrs- 8.968 Mhz, 11.175 Mhz and 17.976 Mhz (UHF-292.100)

System backup provided by the Air Force Eastern Test Range (AFETR), callsign CAPE RADIO, PRMARY-10.780 / SECONDARY-20.390 MHZ

Listening Notes:

Upper Freqs are better during daylight hours / Lower freqs are better at night. West Coast locations seem to favor 15.016 Mhz. HF conditions have been so bad in the last few years that I heard traffic on 17.976 for the first time in ten years last week. For beginners I suggest the "Twenty Four Hour" channels: 8.968, 11.175. At night 6.739 has been well heard from the midwest and east coast. If I was going to pick only one to listen to it would probably be 11.175 Mhz.

Each of these facilites also has at it's disposal numerous other discrete HF freqs for extended phone patches, etc. Most also have the ability to use remoted transmitter sites. Some have steerable directional array antennas. As far as I know all have phone patch capability. Virtually all traffic is "in the clear" (un-scrambled), though you will hear extended numerically coded alert and practice messages. From my midwest location I mostly get traffic to and from Offutt and MacDill.

Hint- These are great sources for getting an early alert to a local IR training route becoming active in your area on UHF/VHF Tac channels, identifying callsigns, aircraft and their associated bases and other "insider" info.

You will hear frequent references to DSN and/or "autovon" telephone numbers. A great site for searching through the numbers you hear can be found on Grove's site:

http://www.grove.net/~larry/dsndir.html

(This will help with identifying base locations during phone patch requests)

Please DO NOT post personal air crew information gleaned from monitoring phone patches to aircrews family members - these folks have a hard enough life as it is - Thanks

Happy Scanning - Ted Moran / Chicago Area Radio Monitoring Association - CARMA

"STOP IN-TER-FER-ENCE"

3671. Kansas Column 0897

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: andyb <andyb@qni.com>
Message-ID: <33E9EA67.440A@qni.com>
Source record: 189280

August 1997

On July 28th, a police car caught a car/train accident with its in-car video recorder. It ended up on the news from coast to coast literally. Did those of you that saw it notice where it took place? That s right Lenexa KS. Alas, the order to stop the train was not in time, and a 1996 Cadillac made an early path to the junk yard. The whole thing was actually rather commonplace until the train showed up. It is not unusual to have a car stuck on a track, but in 15 years that is the first one I have ever had one make contact. Right near the end there was some rather frantic radio traffic, but that was it. If it would not have been recorded on video, it probably would not have made even a blip in the local media. Classic example of the saying, "The media IS the message!"
The officer involved in the ordeal was contacted by not only the local TV and radio stations, but Maury Povich, Ricki Lake, Real TV, and a few others for her appearance on their shows. The only interview she did was on Good Morning America. Of course, everybody at the PD made life miserable for her for a few days by constant teasing and wisecracks. Some clown went so far as to get a picture of her and use his computer to put her on the cover of "Time" magazine as Woman of the Year. I cannot imagine who would have done that. She knows it was all done in good fun.

I went to Las Vegas last week. That is one reason the August column is late. During the flight from Kansas City I was able to use my TrunkTracker. There was LOTS of activity all over the bands at 33,000 feet. Had I known it was going to be that good, I would have made sure my Police Call book was along so I could verify to whom I was listening. Many of the times broadcast at the end of transmissions were from different time zones, too. Low band was hopping, as was the 800 trunked band and everything in between. We flew South West Airlines, whose policy is that anything that is receive-only is fine during the flight. As the plane takes off and lands they want everything packed away, though. I suppose that policy is in effect so a one pound scanner does not fly around the cabin during a crash. Thank goodness for airlines that employ such safety precautions. I sure would not want to get a bonk on the gourd with a radio as the plane drills itself into the ground in a big ball of fire and twisted metal. A person could get a bruise.

My friend, Jim, has been listening to the Mir space station on 143.625 lately. I assume such reception is rare, since things keep coming unglued up there. Jim say about 80% is Russian, the rest is English. Keep that one plugged in, and hope they do not unplug

anything important again!

Last month Dale mentioned that KHP will not allow anyone else on
their 800 systems once they are in place. I questioned him if he meant
no one could get on their towers, or if no one would be allowed to have
a talk-group on their actual trunked system. He got back with me and
they are not going to allow non-public safety agencies any tower space.
No word on who will be given talk-groups on their systems, though.
In another note he sent, Dale listed the DEA national frequency
plan. Some people he knows out there have helped do some of the work on
the system.
Out Input
CH1 418.825/416.050
CH2 418.900/416.325
CH3 418.750 simplex
CH4 418.675 simplex
CH5 418.825/415.600
CH6 418.950/416.200
CH7 418.975/417.025
CH8 418.975 simplex
Dales says if you are in the Garden City area with a
TrunkTracker, you will be able to hear some of the PD/FD/DEA on the
local SMR. (Dale�what are the frequencies?) It is a type I system, but
apparently the first fleet map in the book works. We will be looking
forward to some talkgroup codes from Dale as he and his newly acquired
TrunkTracker get to know each other better.

Another friend of mine, who we will call "Wild Bill," stopped by
the house tonight. He and his new TrunkTracker were out looking for
trouble. Bill is from Kansas City KS, and promised me that he would do
some research on the BPU/KCK merger that was mentioned in the last
column. The technical side of the deal is fairly straight forward, but
the time frame is unknown. He has some contacts there, so I expect some
good poop from him soon.

Next is most of a letter to the FCC Frequency Coordinators from
Mr. Dave Dunford concerning the newly formed "dispatch school" at the
Hutchinson Community College. Dave, who is also the Technical Services
Supervisor for the Lenexa PD (AKA�Head Radio Guy), was/is instrumental
in getting the equipment rounded up and installed.

"�the attached application refers to frequencies proposed for use by the
Hutchinson, KS Community College in a unique operational program. The
college has developed and implemented a broad-based educational program
integrating communications activities from the fields of EMS, Emergency
Management, Fire Science, and Law Enforcement into an accredited
Emergency Communications discipline.

Within the department of EMS Education, the college operates a
state-certified paramedic program, an accredited fire science program
and conducts emergency management instruction. Additionally, the Kansas

Law Enforcement Training Center is located contiguous to the HCC facilities that house these programs.

As part of their regular program, HCC conducts an EMS first-responder program for all attendees at the state police academy and the law enforcement students participate in joint police-fire-EMS field response simulations.

The purpose of the FCC applications is to provide an actual, operating training laboratory for use by the HCC Emergency Services Dispatcher students. Programs are in place to allow these dispatch students to receive actual phone calls, send actual ambulances, fire trucks and police cars to real field situations -- all within the controlled context of an educational setting!

My involvement is to work with the HCC staff to design and build their dispatch center. Equipment was donated for a variety of users then repaired, rebuilt or reconditioned as necessary to make it reliably operational.

Here is a brief explanation of the proposed operation of the HCC-Emergency Communications Center system:

F-1 "Dispatch" 151.010 MHz Simplex
Requested power output: 25 watts, 60' tower height
F-2 "Fire Command" 154.190 MHz Simplex
Requested power output: 5 watts, 24' tower height
F-3 "Fire Ground" 154.415 MHz Simplex
Requested power output: 5 watts, 21' tower height
F-4 "Medical Control" 155.385 MHz Simplex
Requested power output: 5 watts, 27' tower height
F-5 "Tactical One" 156.120 MHz Simplex
Requested power output: 5 watts, 18' tower height
F-6 "Tactical Two" 159.135 MHz Simplex
Requested power output: 5 watts, 15' tower height
F-7 "MED 2" 463.025 MHz Split Simplex
Requested power output: 5 watts, 24' tower height
(Base controlled from emergency room and paired with 468.025 MHz Mobiles)

Antenna for F-1 is a DB-222, top mounted on the tower. All other antennas are
Kreckman brand dipoles, side mounted at the indicated heights on the Rohn HBX-49tower.

The proposed operation of the radio system and the training program occurs at a complex that was formerly the Hutchinson Naval Air Station which was abandoned and fell into disuse after WWII. The site is approximately seven miles south of the town of Hutchinson, KS.

In addition to a hand search of FCC database records, an 'off air' log was made of each of the proposed system channels. The result of both studies was the selection of the group of frequencies requested above.

Because of the number of frequencies requested and the present use of channels in this geographic area, applications has been made in three radio services: Highway, Fire and EMRS. The college is a governmental entity and eligible for licensing as it is a political subdivision of the State of Kansas.

The physical plant of the communication center includes the following resources and capabilities:
One 20-channel Dictaphone logging recorder
Three Motorola CentraCom I (button and light) six-channel consoles
Three Zetron CRT six-channel consoles
Five 30-line IA2 key telephone sets
Four CAD call taker/dispatcher computers
Three 9-1-1 ALI/ANI display screens

In short, the system hardware is assembled and nearly operational."

Thanks to Dave for letting us have that information. You folks near Hutchinson will need to report what activity you hear out there.

That's it for this month.

Andy

PS Dennis—what have you found with your new TrunkTracker up in KCK?

3688. Legislative Alert: Tauzin Drops a Bomb Shell (HR 2369)

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: larry@grove.net
Message-ID: <5sddgq$t4o@news3.his.com>
Source record: 189380

Please give this information the widest possible dissemination on all hobby forums. The author of this message grants permission to repost or reprint the information below unconditionally.

Here is the latest legislative threat to the monitoring hobby. Folks this bill is pure poison to all branches of the radio hobby. In particular, I'm extremely concerned with section 3 of this bill amending the Communications Act of 1934. Every radio listener and ham needs to contact their elected officials in Washington and voice opposition to this bill.

Unlike the Markey bill, HR 2369 does have cosponsors and given the timing in the legislative calendar, I feel it does have an excellent chance of getting through Congress this session. This bill has the same provisions in it as the Markey bill (HR 1964) plus the new language on scanner mods in section 1 and the new very restrictive language for the Comm Act of 34 in section 3. This effects every radio listener from shortwave right on up to the microwave regions. If your hobby is listening to something other than broadcast radio or television, ham or CB this bill could and probably will effect you.

Bottom line:
I will be posting additional info and analysis after we talk to the legal folks. On the surface, this doesn't look good at all. We are going to have a major fight on our hands here.

Best Regards,

Larry Van Horn
Assistant Editor/Managing Editor
Monitoring Times/Satellite Times

<<<<Here is the bill -- snip>>>>

HR 2369 IH
105th CONGRESS
1st Session
To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.
IN THE HOUSE OF REPRESENTATIVES
July 31, 1997
Mr. TAUZIN (for himself, Mr. MARKEY, Mr. OXLEY, Mr. GILLMOR, Ms.ESHOO, and Ms. MCCARTHY of Missouri) introduced

the following bill; which was referred to the Committee on Commerce
A BILL
To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.[Italic->] Be it enacted by the Senate and

House of Representatives of the United States of America in Congress assembled, [<-Italic]
SECTION 1. SHORT TITLE.
This Act may be cited as the `Wireless Privacy Enhancement

Act of 1997'.
SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.
(a) PROHIBITION ON MODIFICATION- Section 302(b) of the Communications Act of 1934 (47 U.S.C. 302(b)) is amended by inserting before the period at the end thereof the following: `, or to modify any such device, equipment, or system in any manner that causes such device, equipment, or system to fail to comply with such regulations'.
(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS- Section 302(d) of such Act (47 U.S.C. 302(d)) is amended to

read as follows:
`(d) The Commission shall prescribe regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--
`(1) receiving transmissions in the frequencies allocated toany commercial mobile service (as defined in

section 332(d),
`(2) readily being altered to receive transmissions in

such frequencies,
`(3) being equipped with decoders that convert digital commercial mobile service transmissions to analog voice audio, or
`(4) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.'.
(c) IMPLEMENTING REGULATIONS- Within 90 days after the date of enactment of this Act, the Federal Communications Commission shall prescribe amendments to its regulations for the purposes of implementing the amendments made by this section. In prescribing such amendments, and in response to subsequent changes in technology or behavior, the Commission shall review and revise its definition of

the term `capable of readily being altered' as necessary to prevent commerce in devices that may be used

unlawfully to intercept or divulge radio communication.
SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.
(a) AMENDMENTS- Section 705 of the Communications Act of 1934
(47 U.S.C. 605) is amended--
(1) in the heading of such section, by inserting `interception or' after `unauthorized';
(2) in the second sentence of subsection (a), by striking 'and divulge' and inserting `or divulge';
(3) in subsection (e)(1)--
(A) by striking `fined not more than $2,000 or'; and
(B) by inserting `or fined under title 18, United States Code,' after `6 months,'; and
(4) in subsection (e)(3), by striking `any violation' and inserting `any receipt, interception, divulgence, publication, or utilization of any communication in violation'; and
(5) in subsection (e)(4), by striking `any other activity prohibited by subsection (a)' and inserting `any receipt, interception, divulgence, publication, or utilization of any communication in violation of subsection (a)'.
(b) RESPONSIBILITY FOR ENFORCEMENT- Notwithstanding any other investigative or enforcement activities of any other Federal agency, the Federal Communications Commission shall investigate alleged violations of section 705 of the Communications Act of 1934
(47 U.S.C. 605) and may proceed to initiate action under section 503 of such Act (47 U.S.C. 503) to impose forfeiture penalties with respect to such violation upon conclusion of the Commission's investigation.

The handset freq is usually more clearer (48,49mhz) depending on the
persons proximity to the person scanning. The base (I
find)(43,44,46mhz) brings in both sides of conversation but not as clear
as the one-sided handset.

3690. HS200 or What (Newbie Question)

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: Alec Isaacson <alec.isaacson@connects.com>
Message-ID: <33EA7A28.363996FB@connects.com>
Source record: 189382

I recently had my Bearcat BearTracker scanner stolen, so now I'm in the market for something new. I think a battery powered hand held unit will be better for me, since (among other things) I'd like to use it to listen to auto and boat races.

However, the one thing I have heard is that the HS200 only uses double (rather than triple) conversion, which makes it more likely to pick up unwanted signals (I live in the suburbs of a mid-sized city).

My questions are these: Does the conventional net.wisdom say that triple conversion is a must have? What will I loose (or gain) with in a scanner with double conversion? Is the HS200 truly a nice machine, or is there something in the same price range ($250) that is better?

Thanks in advance for your help.

Hi all; I had taken the freqs listed for these 2 groups from shows done earlier this year, and condensed them into text files. Both lists show several new freqs, and the Blue Angels have been noted in at least 1 instance using DVP. Of course, usage of each freq may change from show to show, but the list updates many others - older - that have been floating around for some time.

Most of the data came off the Scan-l and Scan-dc servers. Of course, we want to hear of any new freqs not on the list!

enjoy and 73s Mike Agner Ka3jjz

>Some people seem to think God gave them the right to listen to others' >conversations over radios
<snip>

It's the government that givith, and the government that takith away.... To say that the people in government that made the decision to allow that cordless telephones to transmit on open radio frequencies didn't know what they were doing is assnine. To say that the phone manufactures didn't know what they were selling is also just as idiotic. Which leaves us with the consumer.........

Don't know about anybody else out there, but you'd think that anyone that buys something should read the frickin' manual that comes with the damn thing. The ownership manual states:
"WARNING. This telephone operates as a radio transmitter. Conversations over this cordless telephone may be heard by others on radios within the area of it's range of transmission."
Simply put, it's never been against the law to monitor these frequencies and it's never been implied nor stated that people using these frequencies are engaging in "private" conversations.

When this govenrnment sactions and passes laws that declare actions by it's citizens legal, then it is within their rights as citizens to engage in such behavior (morality not withstanding). When and if the government decides to recind these, then they are taking away the rights of its citizens. Believe it or not, what this proposed law does is take away the rights of others. This type of governmental action says "it's OK to be an idiot, we'll protect you from your stupidity by restricting others' rights". The "land of the free and home of the brave" is quickly becoming "the land of the "fee" and home of the stupid" ;-) aka "Parker's World"....... <LOL>

Mark.......

And once you "get lucky" with a given audio data stream, your success is good only until the key is changed again. Most DoD elements change them codes anywhere from daily to monthly.

Does anyone in this NG known if it is still legal to use a scanner (mobile, handheld, or otherwise) in an automobile in Utah? The information I have from Clay Irving's scanning site states that it is legal, but since the information hasn't been updated since 1996, I need to know if the law regarding mobile use of scanners in Utah has changed. Please post your response in this NG or E-mail me if the law has been changed since '96. Thanks!

I find it ironic that the press pushes to hyper-extend the First Amendment
at every opportunity (such as this) while doing their best to denigrate
and eliminate the 2nd at every opportunity.

I guess it's too much to expect consistency, huh?

In another version of the below story a hobbyist was illegally monitoring cordless phones and breaking some crude encryption to boot. He posted his story on the internet newsgroup. Alas, the newsgroup was also being watched by telecommunications corporations' spin doctors, who used his story in congressional testimony and media new releases. As a result, new laws were passed banning the possession of scanners by citizens. Thanks for helping to support the hobby and Happy Scanning.

If its the Data Encryption Standard (DES) then there are 2 to the 56th
power different codes. How many is that??? My calculator does not have
enough digits.

A couple of years ago I was listening to a car chase. The pursuit had just gotten started and the officer hadn't rolled his window up so you could hear his siren and engine whenever he gunned it.

About five seconds later, you could still hear the siren but not the engine. Then a sheepish voice could be heard saying, "Pursuit terminated. I ran out of gas" followed with howls of laughter and cat-calls from other units.

I'd like to see that on COPS.

I have a Wineguard (sp?) UHF-TV antenna with a built-in Pre-amp. The antenna is combined with a VHF TV antenna. I found in general it makes a pretty good (somewhat directional) scanner antenna.

But on 800 Mhz WOW!

When I connect this antenna to my Pro-26, the 800Mhz band came alive. All sorts of stuff that had the 'frying eggs sound', hiss, or poped in and out as I moved around now comes in rock solid and noise free.

Interestingly on 800Mhz it doesn't seem to matter what direction the antenna is pointing at least on the stations I could normally hear with the whip antenna.

BTW: I've tested many UHF TV antennas. The Wineguard with a pre-amp is the best performer I tested. Unfortunately the antenna's been up for 17 years so I don't remember the Model.

I recently picked up a used HS200 and am very happy with it. It has
excellent audio output which is essential if you using it a motor
sports events or any other area with lots of external noise. It is
easy to operate and has very good sensitivity. For the money I think
it is an excellent buy.

I have a nice Pro-2021 scanner. Covers 30-54; 108-136; 138-174;
410-512mhz. Has 200 memory channels.The electro luminescent panel is
dim. It has been that way since I got it last year in a trade. It
causes me no problem. The plastic cover for the 9V memory battery is
missing. Otherwise the unit is in great shape and recieves very well.
I am looking to trade for something different. Suggestions on the list
below. I am always open to something interesting! My main interests
are in scanning and SW recievers. Write me with your ideas!
Here Is My List Of Current Wants:
Magnavox D-2999 Sw Recvr
Sangean ATS-803, TAS-818, Or ATS-818-C SW Recvr
Realistic Pro-2026 Mobile Scanner
Realistic Pro-41 HH scanner
GRE Super Converter 9001 / Possibly 8001
Or What Have You.....

Well, since this mission is a scientific research mission (cryogenic infrared spectroscopy and testing of Japanese manipulator arm for the International Space Station) and NOT a MIR servicing mission, that's true---CASUAL conversations between Columbia and MIR could be by 2 meter ham radio. In a MIR servicing mission they'd use other dedicated freqs, which, IIRC, are in the 200-300MHz range---I don't have the listing with me.

Happy Scanning,
DK

From: FTN <ftn@hotmail.com>
Message-ID: <33EB3F45.39AA@hotmail.com>
Source record: 189024

--

I am selling my Yaesu FT-990 HF transceiver with built in 90 channel scanner. This is a great receiver/scanner or transceiver for the future HAM.

The radio tunes continuously from 100kHz to 30MHz. It transmits and receives in AM, FM, SSB, & CW. It has not been modified to transmit out side of the HAM bands. It has a built in antenna tuner, SSB crystal filter (2.0k), digital readout, 90 memory channels, and lots more goodies. Two mics come with it. The hand mic and the MD-1 desk mic. The output power is adjustable from 1 to 100 watts. This is the 110vac model.

The rig is in like new condition because I never use it. I purchased the rig new so I have the original box and manual.

The price is $1,450.00 plus shipping. If you are in the Denver area you can pick it up. I would prefer a cashier's check but if necessary we can run the transaction through my company Visa/MasterCard account.

If you would like any further information, please contact me at 303-674-0510 or E-mail me at ftn@hotmail.com

-Bill

And the difference is what?

Don't they both occur as a function of less than linear amplification?
Don't they both require more than one signal (or a wide baseband)? In
the end, isn't the result the same?

3739. Help with Images

Newsgroup: rec.radio.scanner
Date: 1997-08-08 00:00:00 UTC
From: al@alsplace.com
Message-ID: <al-0808971547440001@206.28.74.97>
Source record: 189031

On my scanner I can hear what sounds like a cable company on 378.425mhz. Since this is in a military band segment I guess I'm hearing an image. I have a double conversion receiver with a 10.7mhz IF. If I take 378.425 plus or minus 367.725 (the freq I'm hearing the image on minus 10.7) the resulting frequencies don't fall in a business band.

HELP....What am I doing wrong here? How can I figure out the "real" frequency of the cable company?

Thanks, John

No, newsgroups should not be censored by the government but they should be censored by using a little common sense. What has all this to to with Amateur Radio?. Surely there is an appropriate newsgroup for political opinions. This is not it.

Unfortunately, it has a pretty fair chance of passing. The time is NOW to
write and make your views known. If there is no or little opposition,
it'll breeze through the Congre$$ during the upcoming
"lets-get-rid-of-these-bills-and-get-on-to-vacation" session. You're
certainly right on the enforcement side though, it'll be difficult to
enforce in most cases. If it tightens up the scanner supply with
equipment prohibitions, thats bad news and will generally have the same
effect over a period of time.

3745. Anyone know what Uniden Bearcat 760xlt MOD does???

Newsgroup: rec.radio.scanner
Date: 1997-08-08 00:00:00 UTC
From: highway@$$$.netsource.co.nz
Message-ID: <33ec9447.2767031@nntp.netsource.co.nz>
Source record: 189037

I'm interested to know what frequencies this modification gives.
If I know I might try it...

"
Concerning the Uniden Bearcat 760xlt, the mod for the 950xlt does work
to restore lost freq. Disconnect pin 20 of the microprocessor from the
circuit board and connect it to pin 19. I bent the pin slightly and
cut it with the scissors of a swiss army knife then soldered an 1/8
lead cut from a cap across the pins near the top of the chip. I've yet
to find any problem with this mod. But as always do so at your own
risk.
"
What frequencies does it restore???

Thanks.

That sounds like the BC 220, then. I may well be mixing up my BC 175's, 210's, and 220's here, but in any case, none of them had receiver circuitry capable of receiving above 512 MHz. I have service manuals on them at my shop, I believe. Used to work on them until my customers got newer stuff.

I was listening to a high speed chase across downtown L.A. in the
middle of the night a couple weeks ago so I didn't catch all the
details, but elsewhere in the city...

dispatch:
Attention all units,
211 just occurred at 123 45th st,
suspect described as male hispanic brown on brown,
wearing white t-shirt, black shorts,
last seen walking east on 45th st carrying a brown box.

unit1: dispatch, contents of box?
dispatch: donuts
unit1: 10-04
unit2: dispatch, how many donuts was that?
dispatch: one dozen
unit1: dispatch, 10-09
dispatch: one dozen
unit1: 10-04
unit2: dispatch, would that be 8 or 12 donuts?
dispatch: one dozen. that would be *12* donuts.

The dispatcher was one of the gals with a clear voice that can get an
initial broadcast out in 3-5 seconds. After the initial broadcast you
could hear her grin getting bigger with each follow up response.

That's what they said about the ECPA. And they don't have to sieze your scanner. All they have to do is cut off the supply. This will prevent new people from coming into the hobby and eventually the result will be the same as if they confiscated them.

This is a big mix-up!

The company you said went broke was CommFocus
with a product called Softwave. That was a couple of years ago.
I am one of those people who wanted to buy one, but I was lucky
for not having lost any money (I refused to put a deposit).

But the company who makes Winradio is alive and well and there is no
relationship between the two.

Also, the product is very different. Softwave was just a shortwave
receiver . Winradio is a wide-band scaner to 1300 MHz.

You can see Winradio on http://www.winradio.com and download
their software.

Incidentally, I own a Winradio and I am very happy with it.

Cheers,
John Carol

Al,
You need to double the IF before subtracting (21.4 vs. 10.7). I
know this still lands you in the Mil Air band so I don't think image
reception is the problem, maybe harmonic or intermod. If the cable
company and another transmitter (most likely with a dead carrier)
transmit together, you can get an intermod of the sum of the two final
RFs. This one is a head scratcher.... :-/

GET1412
Program Manager: Multi state
Responsibilities:
You will be responsible for overall planning and execution of significant contracts. You will also be responsible for all business planning, customer interface, sub contracts, and subsequent build out of the installed network. You should be an experienced manager having managed contracts, sub contracts and worked with multi-disciplined programmatic issues. You will supervise all on-site personnel and coordinate the activities of corporate, sub contractor and customer personnel dedicated to the program. A BS degree in business administration, systems management or related disciplines is a must with 5 -8 years of relevant experience.
Ideally, you should have a strong foundation in logistics, have RF communications in your background, and done propagation.
Skill sets include:
Management skills: Should be excellent in people / process / resources. Able to work within time and budget to get objectives done.
Developed suburb diplomatic and leadership skills. Good presentation skills. Able to interface at VP / director level in a utility environment. Also, able to sell to associated and current utility accounts.

To apply for this position, please send resume to GETcareers@gettec.com or fax your resume to General Engineering Tectonics @ 209-469-2614 or the best way for us to serve you visit our web site at http://www.gettec.com and fill out our candidate profile form. You may mail your resume to 1807 Navy Drive Suite A , Stockton, CA 95206. Please be sure to include the position identification code, this is very important, it makes it much easier for us to serve you.

>under the impression it wasn't near completion. Hence they were still
>using their outdated VHF low (42.xx & 44.xx) assignments???? Anyone
>know the case here????

Michigan has completed the installation of a new statewide system using the 800-MHz Public Safety Plan. Frequencies in the 866 to 869 MHz range have been assigned to MSP *and* to each county in the state. On about July 1 all the 42.xx frequencies I monitor (Wayne, Oakland, Monroe and Livingston counties) went silent. On about July 15 all the state, county and local police frequencies in my home county of Livingston went silent. All signals monitored on 866 to 869 MHz have been digitally encoded.

Only ambulance, fire and municipal traffic continue to use their previous frequencies in Livingston County. These may also migrate eventually to 800-Mhz when funds for new radio equipment are found. Injury to Insult Department: I estimate the cost of new 800-MHz radio equipment used in Livingston County will add about $600 to the tax bills for each household in the county. That's the price of being the first local adopter in a sparcely-populated area.

One ray of hope: I understand that the Motorola digital encoding system does *not* use encription, so there may be hope of someone developing receiving equipment for these signals. FWIW: a seemingly knowlegeable sales associate at a local Radio Shack <flame suit on> is spreading rumors that RS will offer receiving equipment for these signals by year-end. No details.

Sorry about the bad news!

I have seen a lot of this kind of thing posted in the newsgroups so I thought I'd share some of my experiences "on scene".

I am a computer programmer by trade but sometimes I moonlight as a independent photojournalist when the scanner seems busy enough. I do not do it for money, I simply enjoy providing the news media with video of interesting events when I get to a scene before they do. I have contributed several videos to our local news agencies, and never been hassled by the police or any other public safety types. I credit my "luck" to following the rules, and using common sense.

First of all let me say I see nothing wrong with a concerned citizen with a scanner showing up at an incident to watch first hand what he/she has been listening to, AS LONG AS some simple guidelines are followed:

1. Stay out of the way. Watch to see where the other bystanders are and stay there with them. I have seen so many people who think that because they have a radio on their belt, they do not have to listen to the police and firemen. These people are risking arrest, and rightfully so.

2. When asked to leave, do so. There have been a few times when, because I am not officially affiliated with any of the news agencies, I have been asked to stop filming and leave an incident. I ALWAYS comply with this. Arguing will only get you in trouble and I don't want to lose my camera or scanner. And I certainly do not want to be calling my wife from jail.

3. Don't divulge what you are listening to. You could be inadvertantly aiding a criminal by sharing what you hear, which would be kind of difficult to explain to the cops/ a judge / your wife, etc. If asked, just say "I'm not sure" or something like that.

4. Don't do anything that risks your safety or the safety of others. This includes "playing cop" and looking for bad guys. If he is not afraid of people with guns, he is certainly not afraid of you. I have seen a couple of people seriously hurt trying to catch a crook on the run. Dumb. Best advice here is: Let the people who are paid to handle this handle it. Stay out of the way and watch. And if you see a "bad guy" hiding or running, find an officer and tell them.

5. Make sure you know the laws in your area. Because of abuse in the past a lot of cities and states have ordinances which limit or ban this activity. A phone call to your local police department is all it takes to find out what the laws are in your area. And of course, if there are laws against "ambulance chasing" then DON'T DO IT!!! Stay at home, or if

you must go see what is going on, leave the scanner at home.

I think that if everyone had followed these guidelines in the past we'd see a lot less of these anti-scanner laws being passed.

I have had my 235xlt for about a week now and it is driving me crazy trying
to figure out the correct fleet map. I use preset map 8 and I can follow
conversations perfectly and can lock on an ID and stay with it all day
and it is ok BUT I am getting more than one conversation on some Id's.
For example: on 200-3 I hear PD channel two but I also get PD TAC 2 on
there also. Also the FD dispatch is on 201-1 and they also use 201-2 -3
and -6 for "Fire prevention" and "Fire support" but the fire TAC channels
appear somewhere on like 203-x and 204-x. Should I be satisfied with this
arrangement or should I be able to make some coherent sense out of these
fleets and subfleets. In other words am I wrong to think that if the FD
dispatch is 201-1 then all the FD channels should be 201-x. I know
the arrangement is different for every Type I system but this seems not
to make any sense. Then there is the problem that I mentioned first about
two channels on the same ID in some cases. All my block 1 Id's are messed
up but right now I am just trying to get the block 2 Id's straight becasue
that is where all the public safety stuff is. Everything in block 1 is
Admin Garbage etc etc. Any help wether general or specific would be greatly
appreciated.

Thanks in advance!

Hello,

If you dont want this bill to pass contact congress. If we all left
one message on to each congressmen they would know the bill is not popular
and it would not pass. Use the contact info in one of the messages
above. Many have e-mail addresses it would only take a second but don't
be rude just be polite or they might vote for it instead.

Thanks,
Sam

In a typical fashion, you, a blooming idiotic liberal, will look for
persmission in law to grant you freedom rather than realizing that what
is not written is more an example of your freedoms DIP!

God gave us basic guidelines to live by and some were commandmenst,
but his goal was not to write out everything that is permissable to do
in life!!! He said that the Holy Spirit will guide you into greater
understanding.

THANK GOD you are not involved in politics, for you are a threat to
the American public, and we certainly have enough threats to our
freedoms walking around in the White House and Congress!

> frequency of the cable company?

First off, your calculation is wrong. The image is plus or minus TWO
times the first intermediate freq. So in your case you need to add or
subtract 21.4 MHz depending on whether your LO is injecting high or low.

But that doesn't help. The frequency still looks wrong, huh? Maybe its
a spur or harmonic from a radio system (like a repeater) that needs to
be serviced.

Regards

Message-ID: <Forum.871070428.4443.schapiro@N5139.als.ameritech.com>
Source record: 189202

Are there any mods or methods for improving the audio output of a PRO-46? The factory setup has decent tone quality but the maximum volume available leaves something to be desired. While I know I can (and have) used headphones at airshows it's preferable to use it without such entanglements.

Thanks,

Ben Schapiro

Attention to all newsgroup participants who live in the Las Vegas area!

Between 2100 on 8/6 and 1030 on 8/7 my van, which was located at the Rio's parking lot, was broken into. The thief or thieves stole one 60 Watt/7 Band Equalizer, one TRC-438 CB, and one PRO-2026 mobile scanner.

The scanner will definately be the most identifiable of the three items. Most of the general public will not be looking for a used mobile scanner as opposed to a CB or equalizer. The scanner will have no box or manual, the mounting bracket most likely will be bent, the right side mounting knob is missing the white plastic bushing and the rubber washer, and the date code is 11A2.

I need your help to disseminate this information because I have now returned from my Las Vegas vacation to San Jose, CA. Please copy this information and provide it to any pawn shops, scanner shops, ham radio shops, and CB shops that you frequent in the Las Vegas area.

What is your reward? The first person who has information that leads to the arrest of the thief or thieves gets to keep the stolen property if it is recovered. At this point I am only interested in trying to make sure the bastards do some jail time. Any pertinent information about this case (event number 970807-000937) should be forwarded to the Las Vegas police.

Thanks,
Hounddog

It's a wonderful scanner there, Roy. I bought it (used the 10%
Off New Items coupon in the new catalog) and modified it.
The mod takes about 2 seconds. :-) I'm in a high RF area, so
intermod was pretty bad. I swapped the tiny Pro2030 with a
friend's BC890XLT that has a PL board. (I'd sold him my
BC890XLT about a month ago to make room for the upcoming
BC8500XLT, but decided against the 8500 in the end. <g>)

Anyways, take out the screws so you can open up the 2030.
Looking down into the top of the scanner right behind the
front panel you'll notice a little metal loop that's labeled
L201. CLIP that jumper and move the two pieces a little away
from each other. The loop's so small and rigid that if you
ever need service, you could bend the to parts together and
nobody would know you snipped them.

This radio is the only portable scanner to date with PL
decoding period. An excellent unit that excels at interference
rejection for a dual-conversion unit. Wonderful audio and
great backlit display and keypad. Runs for a good time on
4 AA batteries. Has almost no squelch tail. Great sensitivity
and very well made by Yupiteru.
For the price, it is one of the best values out there
today. See my web page below and follow the links for a
review I posted of this unit back in January of this year.
Good luck!

Date: 1997-08-08 00:00:00 UTC
From: consul@royal.net
Message-ID: <33ebafc2.2357977@news-s01.ny.us.ibm.net>
Source record: 189222

Excuse my ignorance. An advice would be appreciated.

I am interested in the algorithms behind trunk tracking but can't find it anywhere. Does anybody have the technical background info about how to decode the channels, etc.?

Are the voice signals themselves digitally encoded (how?), or is it just the supervisory channel that does the channel allocation (how?) that carries digital data?

Can anyone shed some light on this please?

Many thanks
John Carrol

I have a PRO-41 in near-mint condition, but are you sure you want to trade a 200CH scanner for a 10CH? Maybe you should look in to having your unit repaired. I have a PRO-2021, and I think it's a really nice scanner, and you would be just plain DUMB to trade a 200 channel scanner for a 10 channel. This is just my opinion, though. You could have a more important reason (like wanting a handheld), but look into a newer one like a 200 Ch RS handheld.

Michael

His Lordship is broadly correct. So you don't have to be rude.

Why not ask him what he would call the symptoms of Intermod from the Tx
being received on your non crossmodded Rx. I would say that you are
receiving intermod.

I brace myself for correction. Usually by gripping the ... Ahem, but we
dont need to go into that here.

I have 2 Cellular capable logic boards for the PRO-2042
You can also install this board in the PRO-2035 to upgrade it to a 2042.
When you do this mod, the 2035 will function exactly as a 2042.
No duplicate freqs. in the search and store mode, will automatically
skip over 000.000mhz channels,lock-out in the search mode,
(you can lock-out birdies) will also prompt a warning if you are entering
a duplicate freq. that is already stored in a memory.
No soldering required, just unplug a few cables, 4 screws and your done.
No CODs
$ 300.00 (I will cover shipping)

Lynette, can you believe that their are people walking around in the
USA like Lloyd??? Its amazing to me!
If many of these various laws on scanners and encryption pass, in the
next few years, we will have many new government agencies develope with
the expressed goal of "National Security". They will employ people to
watch over the rest of us who, like you mentioned, may not trust the
government for their protection, so they must be doing something wrong.
Ahh, Big Brother is growing up!

Our police department over the last several years got quite familiar with a manic depressive named Barry Davis (changed). They were always running over to his house to talk him out of suicide, the fire dept. was always hauling him off to the hospital, etc. About a year ago, he married a woman who was even worse, so the majority of his calls were about her killing herself.

A couple of months ago, they got the usual type of call -- one of them was about to slash their wrists or something. When the cops got there, though, Barry told them everything was fine; he was moving to Florida and wanted to say goodbye to them.

AFAIK, they did not arrest him for the false 911 call. That probably would have just delayed him getting out of town.

LITT is now a Mailing List for all LONG ISLAND SCANNER LISTENERS,
This list is a REAL TIME Mailing list that means as soon as you post a
message to the list, it is relayed to all on the mailing list. This would
be
good for Alerting other Scanner listeners of ACTIVITY that is going
on at the moment..

This list is open to:
Scanner Stuff, TT ID's , Vhf-Uhf TV DX , Am-Fm Radio DX ,
Satellite TV (I have 2 Satellite Dishes), SWL, and any other interests..

Also I Setup an IRC ChatRoom (Internet Relay Chat)
for the LI Scanner Listeners to Hang out in and Discuss Stuff, that we
could us this room for Q/A for the LIMA NET (for non - Hams)

LIMA NET is Tuesdays at 8pm on 146.805 Mhz (Ham Radio 2 Meter Repeater)

Users would need to have a Internet Connection, (ie. AOL or better) and
a IRC Software (ie. Mirc , Pirch , WS-IRC).

I use a GREAT piece of Sharware for the IRC, its called MIRC
and its available for Win 3.1 and 95..You can get it at:

http://www.mirc.co.uk/get.html

If you dont have Windows, and have a Mac or something else, you can
TELNET into the IRC SERVER..(see below for more info)

I set up a room on the DALNET IRC Server, u can get
more info at :

Http://www.dalnet.com

Here is what you need to find the room:

IRC Server: hebron.in.us.dal.net (irc.dal.net .. is good also)
Room Name: #LITT

If tour TELNETTING IN use:

Telnet://telnet.dal.net (use a LOGIN: dalnet with no PASSWORD)

Enjoy,
Keith

I measured the first IF in the RELM HS200 to be 280.2 MHz.

The one I tested in April 1997 Monitoring Times displayed
very good image rejection due to the high first IF.

The HS200 has lots of audio, lighted keypad (scanner can be operated
and programmed in total darkness), CTCSS and DCS decoding squelch,
fast scan, and reasonable battery consumption. It is powered
by AA cells, not a proprietary pack.

It's a great performer and an excellent value at $250 street price.

The Bill of rights guarantee the rights of the States and of the people
respectively, though rarely is it interpreted (Constitution) the way it
intended.
You can thank John Marshall Chief Justice under Pres. T. Jefferson for
that, he decided that the Supreme court would create "Judicial Review"
so the court would be powerful and have more power than the Constitution
intended. But I digress...73...Al

>
>Listen and Ye Shall Hear!

I've had a RELM HS200 since they came out and like it a lot. I use it primarily for public service and business monitoring and find the PL/DCS function great. The 800 MHz receive seems to be a bit poor with regard to intermod from cell phones but this is probably due to it being very sensitive in this range. Besides now that I have the Trunktracker I seldom use the RELM in this range. On the other ranges the sensitivity is as good as anything else and with the PL/DCS there is practically no intermod or image problems.

Overall the radio has few bells and whistles but I use it primarily as a program and listen to radio. It's tied with the Trunktracker as my favorite handheld.

Message-ID: <19970809031301.XAA18144@ladder01.news.aol.com>
Source record: 189063

That is kinda a tuff question. There are two (2) types of trunked systems. You have analog and digital. With analog, all radios listen to a control channel, from which a frequency assignment is given and the radios are simply directed to automatically switch to a given frequency. Their is no digital data and the voice is not digitalized or scrambled and desrambled by the system.

Digital APCO 25 systems are completely digital and can be encrypted on top of that. They have a digitalized control channel and when they are directed to switch to a frequency, the voice is digitalized and can only be decoded with a digital radio.

If you need anymore info, just email

Hi Bjorn:

This may be what you're looking for. I've been using it for a few
weeks and it seems pretty nice. Go to http://www.shareware.com and
download freqfil5.zip. It is an editable frequency database that
seems to be pretty flexible.

>800-MHz Public Safety Plan. Frequencies in the 866 to 869 MHz range
>have been assigned to MSP *and* to each county in the state. On about July 1

Actually only the southeast portion of Michigan is online with their
digital 800mhz TRS at this point. SE Michigan is Phase 1 of 4. Phase 4
is still at least a couple years off.

The system is being made available to public safety agencies for a
fee.

Although I don't condone the theft of your radio, a serial number is the
only way to prove whose radio it is. Date codes are hardly scanner
specific.

Hello,

I am looking for a scanner that would scanned thru the cellular phone band that is capable of reading the ESN/MIN and also the DTMF the user(of the cellular phone that is press)and also should be capable printing out all the details. Please send feedback thru e-mail only.

Thank you very much.

It is considered an obstruction of justice, and if caught with a scanner inside your vehicle, the scanner will be confiscated, and the vehicle will be impounded. Obstruction of justice in the state of Florida is a felony I believe.
Happy Scanning!

>

This is incorrect. I hear people all the time (mostly on the Ham bands)
using the term "INTERMOD" incorrectly. I heard it so much that I
actually believed it too. That was until I studied for my General
Radiotelephone Operators Licence, and learned that what most people mean
when they talk about what their RECEIVERS are experiencing is actually
called "CROSS-MODULATION"

INTERMODULATION has to do with TRANSMITTERS, and
CROSSMODULATION has to do with RECEIVERS.

When ever you hear someone use the term INTERMOD when they talk about
their RECEIVER, and that they are "receiving" Intermod... Tell them the
CORRECT term is that they are receiving CROSS-MOD!

It is infinitly less expensive to "pay" to have favorable legislation
banning anyone from listening on the frequencies, than to bring on-line
(and then maintain) secure transmission hardware/software.
And ALL companies interested benefit from such legislation, as well
as the legislators themselves, in more secure phone conversations.

Message-ID: <19970809141300.KAA21834@ladder02.news.aol.com>
Source record: 189080

Go for the Radio Shack model. It's a more sensitive reciever. Plus it
covers more of a freq range.. BTW, the Sportcat covers
29-54 MHZ in 3 bands
108-174 in 4 bands
408-512 in 4 bands
800-956 in 1 band

Hope this helps, :)

3847. ****TV SIGNAL AMP FOR SCANNER?****

Hey,

I found a TV signal amp recently, and I'm wondering if I could use it with my scanner? It sais "VHF/FM 12 db Signal Amp" and has a cord leading to the wall socket. I have an old Bearcat 210 XW which badly needs some signal improvement (it was made in 1977), and I would want to use this amp for it. Can I? The amp has the 75 Ohm type plugs for TV wire, but I think I could just put a small piece of wire in it, and it will do. Has anyone tried this? Does it work? I live about 5 miles out of a major city (Phildelpahia), and I want to hear the PD from accross the city. Please e-mail me with any info. Thanks.

73's,
EugeneD@aol.com

Order a new key pad from radio shack unlimited, I used loc-tite once
it worked for awhile, the coating will flake off with use. Mine lasted
a few months. Since you have to take everything apart order the
replacement part. it cost around $6.00 and I received it within a few
days.

It might work, but what will probably happen is that you will get increased interference. Amps like this are fine in rural or fringe areas where intermod and other interference are negilble, but so close to the city makes it doubtful that it will work.

Try it out, as long as you already have the amp, andm if it works for you, Great!

The Bearcat 210 was a sensitive radio in its day, but you may be better off buying an inexpensive scanner from R/S or other source.

You know, I wish this weren't the way things are going, but let's face it: electronics has become competitive on both sides. Hackers have dealt with the Federal Gummet's approaches by becoming more resourceful, they take it as a challenge; and like scanners, most of them do it for pure entertainment and in the interest of staying informed. (Read the news articles about L0pht Crackers and how Microsoft--yes, the giants--have started talking with these Hackers asking for help on improving their Win95 NT security networks, at the same time the Hackers released another version of their breaker.)
Now, the Fed Empire is not going to get any less paranoid, and they are not going to get anymore sympathetic to small hobbyist groups, but one bad apple doesn't spoil the whole bunch, and hopefully issues of freedom, information, and the consitution will not be forgotten on whichever senile, white men in blue suits decide on this issue.
Leaving only one thing to consider: Is it better not to post this information? Or is spreading knowledge and information the best way to keep people safe, stable, and calm?

Todd

of course, that's just my opinion

I have gotten a few replys to my " PRO-2042 CPUs " post, and they stated
that I was out of my mind asking that much for the boards,,,,,, Well
heres a news flash for you mindless idiots,,,,,,,,,,,,,,,,,,,,,,,,,,,
The board, straight from RS was $169.78 plus 10 bucks to ship it.
The CPUs, straight from Javiation in the UK cost $ 60.00 plus 20 bucks
to get it here. And on top of that I am covering shipping + ins. to you.
That adds up to $ 259.78 plus $10.00 for me to ship it, thats $ 269.78
In case you didn't realize, that is a surface mount micro-chip
that measures 1/2x3/4 inch with 100 legs on it that takes a little
time and skill to install.
I will gladly sell you the CPU for exactly what I paid for it but I highly
doubt you'll be able to install it and have it work.
So I making 30.00 bucks for all my time and effort put into this project.
Next time you guys start running off at the keyboard, put down your
generic beer and take a walk around you moble home and think before
you type!

I'm new to scanning, live in the Covina area, and would appreciate getting freq info from anyone living in the area and neighboring cities. I've got about 250 channels programmed in my scanner with frequencies gathered by scanning, Police Call, and a ton of FAQs, data base dumps and web pages. My banks are currently set up as follows:

1) Covina
2) Neighboring cities (azusa, glendora, san dimas, etc)
3) Outlying cities (arcadia, industry, pamona, etc)
4) LA County Sheriff - dispatch
5) LA County Sheriff - tactical
6) Air - Police and News
7) LACF
8)
9) CHP
10) LAPD
11) CB 1-20
12) CB 21-40
13) MED Channels
14-20) mostly empty - misc freqs

The main problem I'm having is the staggering number of active frequencies, the number of frequencies shared by police and fire departments, and the interaction between local police/sherifs/CHP. Most of the frequency lists contain errors and/or conflicting and ambiguous information, and, it looks like it will take several months to get it all sorted out.

What's missing from the available info are scanning strategies, bank layouts, and key frequencies for various circumstances in the SG Valley. For example, I've watched a couple high speed chases on TV that came into the area. I found a lot of radio traffic in the areas of the chase (mobile units itching to get into the action) but couldn't find the frequencies used to co-ordinate the chase.

What is a good "top ten" for the area that will alert you to critical events? When the scanner is crunching through 100+ channels a lot gets missed, and once something happens it's tough to piece together the details.

If you live in or near Covina, please post or e-mail me the contents of your scanner banks. If there is enough interest I'd be glad to co-ordinate building a set of frequency lists for the area.

Jeff

Its not a stupid law, scanners would allow theives, drug dealers, baby rapers and other crooks to have an unfair advantage, while in the act. If you have a ham lic. you may have a ham radio in your vehicle capable of receiving police frequencies but not the other way around. You have to take a test of electronic theory to get your license scan the 2 meter band in you area and listen for the meeting announcements, usuall on sunday nites in many areas.

FWIW, Racing Electronics will do it, and (at least based on what I've
seen at Bristol) usually one or two local stores dealing in ham and
scanner equipment will also have frequencies.

The nice thing about the RR freq lists is that if you're going for a
two-day event (say, if you're going for Busch one day and Winston Cup
the next) and one of the racers up and changes his frequencies they'll
update the list for free. :)

And of course, racers do change their frequencies a lot to keep the
spotters from other teams from hearing them. :) (Last Spring, one racer
actually had his info scrambled. :P) That's why I mailed telling the
original poster to up and get the RR stuff--there are some frequencies
listed in Police Call, but the list isn't complete and some racing
divisions in NASCAR (Supertruck series, etc.) aren't listed at all.

Also, for those who have not yet been "initiated" into scanner addiction
:) Racing Electronics usually rents out scanners at events, even the
Supertruck races. These will usually be the little Uniden Sportcats,
will usually be pre-programmed, and rent for something like 60 dollars

for two days. (Beware, though--it gets *addictive*. My own scanner addiction started at Bristol Motor Speedway a year ago :)

FWIW, a few tips for those bringing their scanners to a race for the first time:

* Good full-ear headphones are a must. (Fortunately they sell 'em ontrack for something like ten bucks a pair.)

* Use a somewhat decent radio. The real cheap Rat Shack radios will work but will have interference. A Uniden Sportcat or Radio Shack Pro-29 (both cheap and selective enough) will work well as a racing-scanner. This isn't something you need to pay an arm and a leg for. :)

* I can't speak on super-speedways (I've frankly never attended a race at one--largest track I've been to is BMS) but at least on the half-mile and smaller tracks you *may* want to take off your antenna or use one of the tiny 800 MHz antennas. Otherwise you get bleedover. (Can someone who's been to Daytona, Indy et al help out on whether this is necessary too on the big tracks?)

* Sit back and enjoy. :) (I rather enjoyed Rusty Wallace's little parental advisory pre-race at last fall's Bristol meet. :) You also get to hear a lot of the competition and even the fighting back and forth. Might wanna be careful around little kids though, because the language (esp. with wrecks) can get kinda rough. :)

(oh dear, I almost sense a FAQ in the brewing. :)

Most airlines will not let you use any sort of radio reception transmitter OR receiver while in flight. Obviously, transmitting radio devices can interfere with the aircraft's radios, avionics, and other electronics systems. Keep in mind that while you are sitting there in your seat, miles of electronic wires are passing through the interior of the airplane's superstructure, less that a foot or two from you. It has been found that radio transmitters can induce unwanted interference - that's a given.

Not so obvious is the case of receivers. ALL radio receivers generate a weak radio signal. This radio signal is generated by the local oscillator and is used to mix with the incoming signals as part of the filtering circuits which make your radio only pick up one frequency at a time. As weak as it is, this signal still radiates quite nicely from your radio (if you have a second scanner tuned properly, you can pick up this radiated signal too!). The point is that this weak signal *MAY* have enough strength to cause interference with the aircraft's electronics systems. Plus, as your radio scans, this emitted signal is changing to different frequencies, rapidly, thus theoretically being more of a nuisance.

This has caused a lot of debate in the radio scanning community, but as you can imagine, the airlines do not want to take any chances, regardless of whether or not a scanner will really cause dangerous interference.

These restrictions almost always include AM/FM radios, TV's, cellphones, handheld amateur radios, and scanners. I have found that Delta is the only one (maybe they also have changed) that will let you listen to your scanner, but ONLY at cruising altitude. You will find these rules printed near the rear of the inflight magazine.

Your best bet is to ask the flight attendants or one of the officers sitting in the cockpit as you board. Even if the inflight mag does not mention scanners as a restriction, the flight crew always has the final word on such matters, so I wouldn't debate the issue with them.

I have found few flight attendants to have enough technical background on radio theory to understand that scanners are relatively harmless, so if they tell me that I can't use my scanner I just smile graciously and turn the thing off.

This, after trying to use my scanner TWICE during a takeoff, by hiding it and using an earphone. While we were taxiing the flight attendant saw either the earphone or the tip of my antenna, and walked back and told me she'd confiscate it for the flight if I did not turn it off and stow it! So, now I go the easy way and just play along.

In the times I HAVE been allowed to scan while flying, you can hear some nifty stuff. Before listening to cellphones was illegal, you could take a long flight from north to south and actually hear the the accents change from Northern to Southern. Quite a startling phenomenon.

I hope this helps.

Mike

>sunday nites in many areas.

Hello

The reason I thought it is a stupid law is because in theory it would prevent criminals from using it to commit crimes but if someone is set on breaking a serious law like burlary and they want to use a scanner to help them do it do you think they will care about a law telling them they can't? they are already breaking the other law they won't care about a scanner law. I think it just hurts people who want to use it for recreation. But thanks for the 2 meter advice I'll try that.

Thanks again,
Sam

Message-ID: <19970809200000.QAA12878@ladder02.news.aol.com>
Source record: 189120

I have acquired a Regency Turbo 800scanner which appears dead. The digital display does not light up, nor is there any signal to the onboard speaker. Just on a chance, has anyone run into a common problem with this scanner which might bring it to life with a quick fix? Can't see any fuses inside, or any obvious loose wires. Thought maybe someone might have had this experience and found a magic cure. Thanks. KN6EP George

Thats not true I live in Alabama we don't have all that go on even in
birmingham the cops know how to get around it, we don't have gun control
no what ass holes just don't walk up to your car like they do up
north.becouse they could get shot I know for a fact that over 60% of the
population in Alabama have gun inside there cars right now,there is no
tell how much crime that stops. These controling laws are stupid and
unconstitutional in every way. You must be a crazy to think that it will
stop thugs from having scanners. NO LAW STOPS CRIME Look at proibition
if you think it will, I will go anywere in the usa with my scanner it is
my right,not a privlage, my rights can not be taken away without
violating my person thus I will sue there ass off in fed court for
violation of my constitutional rights. THAT IS HOW WE AS AMERICANS GET
BAD UNLAWFULL UNCONSTITUTIONAL LAWS OF THE BOOKS.Thank god I live in a
state were you still have rights....

I program one bank with "hot freqs". I have local police dispatch, fire dispatch, local CHP, etc.. in this bank. If I hear something going on with the local police, then I'll switch to the bank that has the local police channels programed in. This way you don't have to go through all the tac channels and such so it scans quicker.

> Don't see any of these in the Bible either.

Basically, rights come from the status of being santient, i.e., human. Many do also say that these rights come from God, Allah, or whatever relegion you believe in, or if you are an atheist or agnostic, just from nature. These rights are absolute unless you impose yourself and rules unto others. The same is true whether you defend yourself from an attacker, i.e., somebody who is out to impose themselves on you either to rob you, hurt you, or even kill you, you have the utmost right to defend yourself with force.

Now getting back at the subject at hand, scanning and radio listening, the same applies there. Sitting in your home or even sightseeing at an emergency scene is OK with a scanner unless you get in the way of emergency personel from doing their tasks which in itself would be the possible infringement of somebody elses rights such as your disturbances denying them medical treatment and thus being a threat. We have laws against using information gathered via radio communications for the commission of crimes. When I see a fire truck up the street, sure, I'll take my scanner and look, but I stay out of the way.

If somebody wants secure cellphone communications, buy a scrambler or go via landline. As to scrambling of the authorities, I'm kind of uncomfortable about that. There is a saying that I have heard, I think it was on Star Trek, I'm not sure but it goes like "who watches the watchers?" In short, our authorities must remain in the public eye and under scrutiny. Otherwise, the authorities will be more separate from the people and more resentment will build until things crack. We here in America are part of a great experiment in freedom and I'm afraid we were losing it. I tend to be a populist conservative with a good deal of libertarian leanings.

I final note, the more they take away from the people, the more the people do bad. As a local talkshow host here in Pittsburgh put's it, Jim Quinn, "Liberalism creates the exact opposite that it sets out to do." Chuck, just some thoughts as I listen to disco music......

Imagine if we had access to that digital encription also for our own security....the U.S. govt would freak out. Uncle Sam hates like hell to not peek in on fellow Americans!!! Look at Phil Zimmerman with PGP!!!...he has/being prosecuted the the U.S. Govt and has a dozen lawyers because he came out with a dual-key encription program that the Govt cannot crack....lets ask them if they want to trade technological secrets. Thanks to Mr. Zimmerman and the folks at MIT we have a medium to which we can exchange info that cannot be decifered by a third party!

I thought this was a bunch of bunk, so I didn't call.
Imagine my surprise when they called me because
they could "forsee" my plan to not call. They gave
me my free minute, just like they said they would.

There is a way around that.

There are, as I remember two types of front end converters. The
first has a fixed LO that, you could say, converts a whole band (like 49
metres for example) and you tune along your dial to hear the stations, even
though strong local AMBC station have been known to get into the works and
leave their signals at various spots.

The other way is to have a VFO (Variable Frequency Osc.) mix it's
output with the incoming RF. You would leave your radio dial on a quiet
spot and tune by the VFO and NOT the radio dial.

I made a post some time ago about the theory behind this. If people
are itnerested, I will re-write it and repost it.

> the Yupiteru MVT-7100/7200. What is my best bet? Should I wait for
> the ALinco to come out? What are you guys using?

Ed,
My personal vote is for the MVT-9000. I have a review of
it posted on my web site below. The AR-8000, while having
computer control and Opto SCOUT interface ability, is not
anywhere near as solid as the 9000 and I find the 9000 easier
to operate.
The 7100/7200 are older technology and do not have that
many features. Also kind of a pain managing 100 channel banks.
But they are still great receivers and at today's prices from
some dealers they are a good buy for a second or third
receiver.
As for the Alinco, I hope to have one very soon and will
post my thoughts about it after I have a chance to check it
out. My gut feel is that AOR and Yupiteru have nothing to
worry about.
Good luck in your receiver search!

Strong signals,

Do you live in Norway and own a radio scanner?
Then why don't you consider joining our team ?

We can promise you a high level of activity and lots of hot news!

All our correspondence is based on exchange of E-mail. The whole team
participates in any scanner-related subject. New Scanner-frequencies
are shared, equipment evaluated and tested, discussed, traded,
bought,or
sold! We now have well in excess of 2200 Norwegian frequencies in our

tables to share!

You MUST own a radio scanner to join us, though.

Please visit our homepage at:
http://www.geocities.com/SiliconValley/4607/

Given that computers are rich in harmonics of the clock(s) that drive
the data and video circuits and that a typical scanner sitting several
feet away from the computer picks up 10's or 100's of birdies from the
computer, I question how good the performance of a card scanner can be.
Put that question directly to the manufactuer and get some hard data.

I'll add some more indecision to the topic:

I don't know if it is applicable or not; but here goes.....

On OSCAR satellites, (amateur radio communications type)
all modes could be used; according to the schedule of the bird
and what mode it was in at the time. The secret was to keep a
set receive frequency and adjust the transmit to offset for doppler
as the bird passed through the communications range determined
by the horizon and your proximity to the angle of the pass.

There are devices made for ham use that not only control the az and el
of tracking antennas, but could also tune the operating frequency to
offset the doppler effect. I am unsure if the altitude of flight is
sufficient
to cause doppler effect sufficient to make straight communications
unreadable.

Don't know if this sheds any light, or widens the gap......

They are AM with very weird channel spacing. I only heard one once and
had to hang out by the airport to do so. I didn't find it worth the
effort. [You don't see anybody using those phones on the plane, do
you?] If anybody wants the freqs, do a follow up post to request
them and I'l dig them up.

3934. Pro 62 Scanner

Please goto my home page:
http://www.geocities.com/CapeCanaveral/Lab/1060/

Goto the SouthEast Ohio area from the main page.

With the exception of the Hocking, Fairfield areas I have most of the
information you will need. Meigs & Washington are coming online
shortly.

Have family in the area and former resident, and just came back from
the area with some updates/verifications.

Any questions send me a note.

I am Geek Spice, and you're not! So, who do you wanna be? ?

What you hear through the speaker is pretty routine, but it's a fun catch
anyway, and sometimes you get a surprise. Bob Grove can't resist turning on the scanner
when he passes a fast-food chain.

FAST FOOD SMORGASBORD
By Bob Grove

"Welcome to McDonald's. May I take your order?" How many thousands
of times every day is this friendly greeting parroted across the country?
And how many scanner enthusiasts tune in 154.600 and 35.02 MHz as
they drive past interchanges on our nation's highway system?

But the big arches are not the only architecture to house friendly fast-
food frequencies. Just about every chain with a drive-by kiosk has two-
way intercommunications with its customers, using frequencies in low
band, high band, UHF, and even 900 MHz.

While the belt-worn transceivers are low power, the fixed repeater can
usually be heard for a half mile or more. A local McDonald's restaurant
uses a Panasonic system known as the "Order Taker," a likely name,
indeed. A nearby Hardees' system is made by H.M Electronics. While
the radios are usually sub-audibly tone encoded to avoid interference (see
Table 4); some cases of intentional interference have led to substantial
fines and suspension of FCC licenses when hams have abused their radio
privileges.

Some unintentional interferences have proved amusing. A church reportedly installed a wireless public address system on the same frequency as an adjoining fast-food restaurant. As the minister raised his eyes skyward and requested divine guidance, his parishioners heard the electronic reply: "Cheeseburger, all the way, hold the mayo!"

Clerks frequently switch to internal intercom without realizing that, while the customers can't hear their comments, stalwart scanning enthusiasts can. Common fare includes discussions of dates, working conditions, other employees and their employers, and remarks about customers. When the scanner listener happens to be the customer, he reaps a particular delight in catching the employee off guard by responding to what was suposedly a private remark.

A short time ago we learned of one resourceful and highly unlawful prank pulled by a ham with a crossband-capable transceiver. Poised between two prominent fastfood restaurants, he tuned in the customer frequencies from one restaurant and retransmitted it to the competitive restaurants' order takers. Wendy's order takers were understandably miffed when they were getting orders for Big Macs, while McDonald's clerks were scratching their heads figuring out how to serve up a Frosty! It may seem like harmless fun, but don't do it!

This month MT takes a look at the vast, largely unrecognized spectrum shared by these harbingers of hamburgers. We owe a special debt of gratitude to Bob Eisner for sharing the largest and most-up-to-date list of fast food frequencies ever published.

The list was last updated in JULY 1997.

In the US there are three brands of Wireless headsets for Drive
Thru Restaurants.

Panasonic - Operates in the UHF band (450 - 470 Mhz range)
HM Electronics - Operates in the VHF-low/VHF-High Mhz range
3M - Operates in the ISM band (902 - 928 Mhz Wide FM)

Any idea on who manufactures that headsets that you've seen?

: Imagine if we had access to that digital encription also for our own
: security....the U.S. govt would freak out. Uncle Sam hates like hell to
: not peek in on fellow Americans!!! Look at Phil Zimmerman with
: PGP!!!...he has/being prosecuted the the U.S. Govt and has a dozen
: lawyers because he came out with a dual-key encription program that the
: Govt cannot crack....lets ask them if they want to trade technological
: secrets. Thanks to Mr. Zimmerman and the folks at MIT we have a medium
: to which we can exchange info that cannot be decifered by a third party!

: Norm

The Phil Zimmerman case is over. He's "free", the US government decided they had spent enough time on the case, especially seeing that ex-US versions of PGP were circling around with even longer key lengths (2Kbit).

Mind you, to see how stupid the US export laws are for this, IMPORT the non-US version of PGP (FTP to Oxford University, England), and stick in on your web page for download.

Anyone outside the US will be breaking the law for you every time they download _their_own_ version of this software. Funny, huh?

MIT did something funny too; they made the source code in Bruce Schneier's book "Applied Cryptography" OCR readable. Hey, guess what, printed source code to stong encryption is not illegal to export.

Have fun finding methods of cracking gov't transmissions -- I think you'll find you'll need some serious hardware...

:) T

S>O>L. Sorry, your stuck listening to images.
Yours is probably a 20-148B. The CPU duzznt have it in
like the 20-148 and 20-148A's B-model CPU's are
unmodifiable.

That's an interesting point that I put in the letter to my representative.

What if the presidents and upper management of the various scanner and radio manufacturers and distributors (Radio Shack, Bearcat, ICOM, etc.) got letters from all of us saying we would not buy equipment limited in the manner required by this law? We are looking at the destruction of a very successful industry in this country. Point this out to your representative, you think they want that on their record?

Remember, they couldn't care less about your "right" to listen, so you have to approach it from another direction. Try some of these.

Eliminates a source of low cost receivers for legitimate listeners to these frequencies.

Eliminates a source of low cost test equipment for hobbyists.

Eliminates a source of low cost equipment for young people looking to get involved in high-tech hobbies and industries.

I'm open to more suggestions.

Joseph

I can imagine that when you are confronted with the kinds of things that emergency service folk are you have to try and see the "fun" in it. Maybe it's some kind of a defense- mechanism that people use to be able to cope with it.?!~ I've heard a couple of EMTs relating, with humor, a story of a nasty accident that involved, well, you don't really want to know!

Failing that, she must be some kind of sick wench!

They (the police) have an extreamly boring job with breif periods of
adrenalin rushes. She probably found the call to be a nice "change of
pace" from other routine calls. It's like coriners who joke about dead
bodys. To a normal person you would not find ANYTHING funny about that
but when you deal with it every day you can't let it get to you.

True, but with a difference. The info at the above sight is pretty much based on hobbyist's
abitlity to turn up Trunk Tracker ID numbers. The info available through
http://www.eskimo.com/~brucem/ttidking.htm are the ID's as provided by the
coordinating agencies themselves, and include many ID's that hobbyists might
not usually run across.

>save yourself the $8.00.

True, but with a difference. Most of the IDs from the above web site have been collected from hobbyists. The collection of IDs at
http://www.eskimo.com/~brucem/ttidking.htm
have been collected from the agencies themselves and include many IDs that do not show up on the wolfe.net sight, even though that sight is a great resource.

The frequencies have also been obtained from the agencies themselves, and apparently the list that comes with the Trunk Tracker is incomplete.

With the current difficulties occuring between labor and
management at UPS, does anyone have any scanner freqs
for UPS, as it may be somewhat interesting to listen in
at this particular time. I will also add that Ch-19 has been
interesting listening during the late-night-shift, as the UPS
Strike has been a popular topic amongst the professional
drivers. There is also a UPS distro center near me here in
Maryland, and it's also been "interesting" to listen on the
police bands of the town that this center is located in.
Seems like every half-hour, a police car is keeping track of
the numbers of picketers out front, then relays a report back
to HQ. If ur near a UPS center, punch in the local freq's as
some very interesting listening may be heard at this time....

3967. So why do you go there????

Hi.

I have a little question for you radio-wizards..

I got my hands on a RadioShack Pro-70, this scanner looks like its designed for The United States, and not the most active frequencies in NORWAY :-)

So, here is the question, is there any possibility for me to modify the scanner in ANY way to recieve the 54.000 - 137.00 - this VHF Band seem to be missing from this scanner, probably because there are no activity or something on it in the USA.

If you have any info, any suggestions, PLEASE write a mail to me ! :)

Thanks.

I don't know the specific answer, but my educated guess would be that
they would need a mode that would not be affected by the doppler
effect.
I would be interested in that answer myself.

On 9 Aug 1997 14:17:21 GMT, eugened@aol.com (EugeneD) was lurking in rec.radio.scanner, and composed the following about "****TV SIGNAL AMP FOR SCANNER?****":

>Hey,
>
> I found a TV signal amp recently, and I'm wondering if I could use it
>with my scanner? It sais "VHF/FM 12 db Signal Amp" and has a cord leading
>to the wall socket. I have an old Bearcat 210 XW which badly needs some
>signal improvement (it was made in 1977), and I would want to use this amp
>for it. Can I?

I'm using a Tru-Spec 30db wideband (thats a must- you want it to amplify that CATV bands, the 512-900MHz region), and I get great response. Your current amp won't amplify the higher freqs, but will work OK on stuff between 50-400MHz (54-401.7MHz for those picky people out there!). You need a VHF/UHF/FM/CATV type amp to get decent response, but I would guess that a unit of that age doesn't receive those freqs.

It also causes some extra birdies, but that's a minor inconvenience.

Try to use a decent one with a real low noise figure- not like that RS junk- maybe a Jerrold, Winegard, or Channel Master.

Nevertheless, you won't harm anything by hooking it up and trying it out...unless there's some kind of nasty short circuit int the amp. Make sure to check AC leakage between the chassis of the amp and the chassis of the scanner. If you have bad AC leakage between the two, you could burn out the front end. Aside from giving yourself a nasty jolt!

4000. Trunker ID Codes Deciphered

Newsgroup: rec.radio.scanner
Date: 1997-08-11 00:00:00 UTC
From: Gary Moore <76170.1701@CompuServe.COM>
Message-ID: <QWkb9Gtp8GA.313@nih2naaa.prod2.compuserve.com>
Source record: 188847
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Not knowing the first thing about C language programming, modifying the trunker program to command my Pro2006/Opto456 to follow certain specified fleets is completely beyond my ability. However with my knowledge of Motorola's trunking format, access to a trunking simulator, and a scientific calculator, I do have something to contribute to the Trunker project.

The text accompanying the Trunker program indicated that the exact breakdown of the 4 digit hex id code was not known to the author. I think I can shead some light on the subject.

I have spent an evening taking measurements. I found the code to consist of a mathmatical combination of the fleet size, fleet number, subfleet, and the individual id of the radio.

Run a known fleet id code through the formulas I have produced, and you will be able to determine the digits to watch for with the trunker. For fleet sizes A,B,C, and D, the formula is different. We will start with fleet size A. Please keep in mind that these calculations are done in HEX, NOT DECIMAL.

SIZE A:

(Fleet# X 4) +1 = first 3 digits of the 4 digit code produced by the trunker. The 4th digit is the individual id of the radio (ranging from 0-F). If you want subfleet B, change +1 to +2. Likewise sub C is +3, and sub 4 is +4.

Example: fleet 01F, sub A, individual 3 = 07D3.
Any display from 07D0 to 07DF will be from the fleet you are looking for.

SIZE B:

(Fleet# x 20) +4 = first 3 digits of the 4 digit code produced by the trunker. If you want subfleet B, change +4 to +8. Likewise sub C is +C (hex), and sub 4 is +10 (hex).

The individual ID gets a little more complicated from here. If it (the fourth digit) exceeds F (hex) then the third digit is incremented. 3F is the highest individual id in a size B fleet.

Example: fleet 00F, sub A, individual 3 = 1E43.
Same fleet and sub, individual 3F = 1E7F.
Any display from 1E40 to 1E7F will be the fleet you are looking for.

Size C:

(Fleet# x 40) +8 = first 3 digits of the 4 digit code produced by the trunker. If you want subfleet B, change +8 to +10 (hex). Likewise sub C is +18 (hex), and sub 4 is +20 (hex).

Again, if the fourth digit exceeds F (hex) then the third digit is incremented. 7F is the highest individual id in a size C fleet.

Example: fleet 002, sub A, individual 2 = 0882.
Same fleet and sub, individual 7F = 08FF.
Any display from 0880 to 08FF will be the fleet you are looking for.

Size D:

(Fleet# x 2) +20 = first 3 digits of the 4 digit code produced by the trunker. If you want subfleet B, change +20 to +40 (hex). Likewise sub C is +60 (hex), and sub 4 is +80 (hex).

1FF is the highest individual id in a size D fleet.

Example: fleet 100, sub A, individual 2 = 2202.
Same fleet and sub, individual 1FF = 23FF.
Any display from 2200 to 23FF will be the fleet you are looking for.

4001. 1.3-2600 Mhz scanners...is it worth it?

From: Todd Shoemake` <tyler@nightowl.net>
Message-ID: <33EEE2A7.F994D1F6@nightowl.net>
Source record: 188850

You gotta be kidding me you cant compare those two radio's, it is a total mismatch the 2046 wins hands down. I have a bct7 i use in the car and it works great, memory channels are kinda screwy though. You only have 25 memories you can scan seperately the other 75 are spread out through the rest of the preprogrammed stuff and when you scan those it also scans the preprogrammed stuff so god only knows what you'll hear. I tried to lock out all of those pre's but the radio only gives you so many lockouts and then it starts taking them away from other freqs. The bct7 is modifiable for cellular if thats your thing and it does cover CB band too. The only complaints i have on the radio is the quircky memory channels and the fact that the 6 meter band is not in it and the air band starts at 118 not 108 like i would like it too. The 2046 is a great radio and if i were buying a radio for the car i would get the 2046 just for the fact of the ease of use and the greater freq coverage. Hope this helps you, if i can answer anymore questions please feel free to email me.

Actually, the Bill of Rights only guarantees the rights of THE
PEOPLE from Federal government action. The 14th Amendment extends
those protections to State government action. States' rights are
protected under Article IV.

>You can thank John Marshall Chief Justice under Pres. T. Jefferson for
>that, he decided that the Supreme court would create "Judicial Review"
>so the court would be powerful and have more power than the Constitution
>intended. But I digress...73...Al

Yes, you do, and apparently in an uninformed manner. If Chief
Justice Marshall had not presided over the creation of judicial
review, you would not have anywhere near the freedom that you have
now. The whole spectrum of civil rights and religious freedoms that
you now enjoy would have remained outlawed by Congress. Your history
teacher should be able to tell you that review by the Supreme Court
caused the invalidation of laws against free speech, free exercise of
religion, voting by people who were not white males, etc.

>>CORRECT term is that they are receiving CROSS-MOD!
>
==========

CROSS MODULATION is the term used when
information content of one signal is
transferred to another. It is *usually*
due to non-linearity in the receiver
(see Luxembourg effect).

INTERMODULATION is due to the mixing of two,
or more, signals, creating additional signals
on new frequencies which are some combination
of sum(s) and/or difference(s) of the
original signal. Two perfectly clean
transmitted signals can end up creating
intermodulation in a receiver, or even in
some other circuit which then re-radiates it.
A non-linear corroded joint in a guy wire,

a second receiver which may not even need to
be turned on, etc. can all create intermodulation.

When I listen to a station and hear modulation
from a second station in the background, that is
probably crossmodulation. When I find a signal
where none is being transmitted, that is
intermodulation.

Intermodulation may *sound like* cross modulation
since the information content of all the
contributing signals may appear at the new frequency,
but the difference is:

CROSS MOD is on an existing transmission.

INTER MOD is the creation of a new signal not a
spurious from a malfunctioning transmitter. It
requires the presence of at least two separate signals
radiated from at least two separate transmitters.

Transmitters may create all sorts of spurious signals
of their own but they can't create INTERMOD unless
they are operating on two frequencies simultaneously
- not common, but it is done.

It is *very* easy to prove this. Simply use two receivers
- one with poor intermod performance and one with good
intermod performance (both are easy to find) then look
for a new, badly distorted, signal on the poor one.
It *will not be there* on the good receiver.
It is created in the receiver.

Simple example:
Two signals one on 5MHz and one on 8MHz.

Cross mod would result in hearing the signal from 8MHz
in the backgound when tuned to 5MHz, or vice-versa.

Intermod would create new signals on 13MHz and 3MHz
(sum and difference); and also on 2Mhz (5*2-8),
11MHz (8*2-5) etc. etc. etc. BUT the real signals at
5MHz and 8MHz will probably be quite clean.

In article <01bca617$f65426e0$2c7cc6cd@n0mnb.minn.net>, "Bill Frovik"
<n0mnb@minn.net> writes:

>
>i have a cheap scanner in my room and its gets alot of noise from my
other
>equipment, computer, monitor, etc any one know what i can do to eliminate
>it
>some..

Start by trying to identify the real culprits (equip.) in the room by
selectively turning on/off gear. Move your scanner and especially
antenna as far away as possible from these.

Make sure that all pieces of offending gear and your scanner use a power
line filter, and use the three prong plugs.

Personally my Pentium causes no problems, but my 8086 system needed the
following:
1. Clamp-on ferrite core directly behind the keyboard on the
cable.
2. " " on -both- ends of the printer
(HP-3P) cable.
3. " " on the video cable.

By far, the most noise came from my keyboard.

You may find that an extra ground attached to the scanner, while it won't
affect your range, will improve the S/N ratio.

Good luck,
H Higgins

Hi,
I need manuals for the following scanners. (Or will pay copying &
postage for manuals not available).
These particular units are part of my private collection
and the manuals will enhance their completeness in this collection.
Realistic Pro-2021, 200CH Base / Mobile
Realistic Pro-2024, 60CH Desktop
Bearcat III, 8CH Crystal Controlled
Bearcat 800XLT, 40CH Desktop
Regency Z-45, 45CH Desktop

Suggestions on sources for these manuals will be appreciated greatly
if you do not have any of these.
Thanks very much.
Regards,
Ray Miller N2NJK radioman@localnet.com

Hi Mike,
I posted a review of the MVT-9000 a few months ago that
you might be interested in taking a look at. Start with my
web page below. Follow the Radio Monitoring link, then
scroll down to my list of receivers. Find the 9000 page
and there will be the review. I compare and contrast it
to other handhelds as well.
Happy reading!

Source record: 188922

On the cooker right now is 2 different bills, HR1964 and HR2369.
HR2369 has Tauzin's & Markay's name and 1964 has Markay's name.
HR1964 requires a lot of freq's to be cenosred on scanners and
2369 is more strict. It has the provisions from 1964 and other
provisions to make it illegal to listen/watch anything except for
Ham, CB and broadcast.

I called my US Rep's office, Joel Heffley of Colorado and I asked the
phone guy if he heards from anyone else on this and he mentioned,
not at all.

THIS IS THE TIME TO OPPOSE THIS ! It is easier to defeat bills than
to repeal laws. How long did it take to get rid of the Federal
55 mph speed limt ? That was bad legislation from the beginning
but we were stuck with it for 21 years.

No. But even IF the result was the same, such as: Person A shoots
Person B, and Person B dies, This is called MURDER. If Person B cleans
his gun and accidently shoots himself and dies, This is called an

ACCIDENT. The end result is the same, but there is a big difference between the term MURDER and ACCIDENT, and using the wrong term would certainly sound foolish.

This is the best analogy I can give to someone who does not have the electronics background required to understand (apparently) the explanations given in previous posts.

Most ham band antennae will have a fairly limited bandwidth as a
trade-off for gain. I use a Larsen dual band glass mount, and it is
fine for public service freqs fairly close to 2M and 70cm, e.g., 155.655
and 470.8625, but is not so good for, say, 800 MHz public service freqs,
e.g., 860.2625.

I stand corrected--Discovery it is. An orbiter by any other name,
however, is still an orbiter and the frequency info applies equally as
well.

Siemer,

The county is on an 800 MHz trunked system, while the city is on
conventional UHF freqs.:

Fredrick City Fire/Police--

494.3125 Police Ch.1
494.3625 Police Ch.2
494.4125 Police Ch.3
490.6625 Police Unknown

46.3400 Fire (County Dispatch)
46.4200 Fireground

Fredrick County--

856.4875-860.4875 Police/Sheriff/DPW/Hiways Trunked Radio System

851.4625 Unknown Conventional
851.8375 Unknown Conventional
854.9875 Unknown Conventional

46.4200 Fire-Fireground-Channel 1
46.3400 Fire-Dispatch-Channel 2
46.2400 Fire-Fireground-Channel 3
46.4400 Fire-Fireground-Channel 4
155.4900 Fire-Marshalls

Fredrick Memorial Hospital--

(Unknown Uses)
151.7750
461.2250
462.9000
463.7000
464.3250
464.4250
464.9000

935.1500
936.1750
937.6750

That's all I've got...

Hi Curt, Thanks for the response and your opinion. The trailer trash op's on 80 & 20 meters and their misbehavior is only a part of my loss of heart for amateur radio. I really can't explain the rest though. Maybe it has been just one to many amateur zealots that I've dealt with.. I have come to the end of my ham days I think. Interest

has completely evaporated... Best wishes.. Mike Burch K8MB.

a life and

It is sad that you would let the improper actions of a few people
run

you away from ham radio (or Usenet, for that matter).

Athough there are some bad apples on 80 meters, 20 meters, 2
meters

and a LOT of bad apples on 11 meters and the frequencies surrounding

it, I choose to concentrate on working with the many good people on

the frequencies I am license to operate on... yes, even including 11

meters, which I find quite helpful as I travel for learning about traffic

jams, etc.

We have a lot of good radio operators here in "4" land, and
I won't

let a few bad ones inhibit my enjoyment of the hobby. I won't
give

them that kind of victory.

Hi Curt, Thanks for the response and your opinion.

Thanks for the response. I usually fly United, but on 50% of flights,
headphones are not provided, so there is no way to listen to CH 9.
I can try preprogramming the frequencies on the scanner, and change them
by pressing 3 buttons without looking at the scanner while its tucked
under my shirt.

Source record: 188945

Hi once again, Tor:

I sent your service manual by first class mail this morning.

Just noticed your 3 Aug posting about the charger. The charger is a
constant current source. There may be a couple of considerations:

1. Apply 12 volts directly from a power supply.
The adaptor sold by Yaesu isnt required. If
the plug isnt easily available there, Ill make
up a cable and send it to you.

2. I briefly looked inside my charger. There is a transformer
inside. I havent checked but perhaps there is a split
primary winding which may be reconfigured. I dont know
your level of electronic expertise, but I could check mine.

3. Purchase a 240/120 transformer. Mount this in a box with
the appropriate electrical connectors.

4. Check with Yeasu? I dont know if they have an office there.
If you like, I could give them a call and let you know.

5. Find a different hobby (like boating).

Warm regards.

Gary

> sources tells me that these phones only use either AM or AM/SSB.

The system originally used AM or AM/SSB, but most major installations are now digital. Note that the ground site(s) are regional and are most likely not on an airport. In most cases you'll only hear the airborne frequencies, i.e. an aircraft at cruising altitude (and then only if the airline is still using AM).

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels is assigned to each geographical area. Ground frequencies are 45 MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Will new Federal Law Enforcement Commission Investigate ATF, FBI Abuses?

Flood Bill also funded new National Commission on Advancement of Federal Law Enforcement

In late June President Clinton signed the emergency appropriations bill providing relief to flood-stricken states. The bill also provides funding for the National Commission on the Advancement of Federal Law Enforcement--more than a year after the group was authorized to study federal law enforcement. The NRA, ACLU and other groups were responsible for this coup.

Despite the Commission's pro-law enforcement sounding title, many of us hoped the Commission would look into some of the issues of federal law enforcement abuses that Congressional Weaver, Waco and other hearings have not brought to light. However, some doubt it can do so since the law did not give the Commission subpoena power.

Moreover, its members, appointed by Congress, are largely establishment types who doubtless support the proposition "it's more important to protect federal law enforcement than to protect the people from federal law enforcement." Its chair is former CIA Director William Webster, who at least has expressed some criticism of the FBI. Victoria Toensing, a former Justice Department Attorney specializing in terrorism, and a frequent pro-law enforcement television commentator, has had nothing nice to say about the Branch Davidians in interviews. Donald Dahlin is a Professor of Political Science at the University of South Dakota. Robert Stewart is Chief of the North Carolina state law division.

House Minority Leader Dick Gephardt appointed the Fraternal Order of Police President Gil Gallegos to the Commission "to protect the rights and reputations of federal officers." In a later press release, the Fraternal Order labeled the ACLU, NRA and other groups that promoted the Commission an "Extremist Coalition." In a press release the FOP "opposed this legislation very strongly, based on our belief that this "Commission" would be nothing more than a civilian review board for federal officers," and argued that the executive and congressional branches had "exhaustively" reviewed past incidents and the Commission's investigations might put law enforcement at risk. So I am afraid we can expect a good deal of sabotage but very little light or action on either past or future abuses of power by federal agents--or prosecutors.

An interesting WWW site maintained at Syracuse University follows the regulatory and enforcement activities of the FBI, IRS, BATF, and DEA. Called Transaction Records Access Clearinghouse, it contains some surprising facts and figures. See: trac.syr.edu

> Go to: http://www.house.gov/
>
> Do it today.

One thing to note (speaking as one who's had experience raising hell with
congressfolk :)--

I'd strongly recommend anyone talking to congressfolk do it either
through snail-mail or via phone (voice or fax). Most politicians rarely
read their email; usually, they'll have their secretaries handle it or
they'll file it in the garbage. This is partly because in past,
Congressional mailboxes have been mailbombed by folks who don't like
their congresscritters.

You'll prolly get best response if calling by phone, followed by
snail-mail and/or fax. Most phone companies are around 7-10 cents a
minute and some phone companies give discounted rates or even free calls
when calling government numbers (yes, there are entire phone companies
catering to the political activist), and a stamp costs right about 32 cents.

Hi Bob,
This month's Parnass article in Monitoring Times has a
power consumption chart for a few handhelds. The PRO-26 and
BC3000XLT do very well at 76mA. The BC230 is rated at 70 and
the RELM HS200 at 69. Below these are the older BC200XLT at
56 and BC100 at 46mA.
Doesn't sound like you'll do much better than your PRO-26!
Good luck!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

A year ago, I would not have agreed, but today, I am begining to feel
that same sense of anger towards both parties. I would never agree that
there are alternatives at this time. I have to continue to support the
Republicans, though I am many times more patriotic, and concerned about
our futures than any Republican aside from wonderful Pat Bucannon. Pat
has got the NWO out in the open, and thus, he is not going to make it as
a candidate because the NWO crowd hates him and they control the media.

Why wont both parties come clean on the issue of world government?
They both support it, and are helping to bring it about, yet few
Americans realize this fact. And, few of us support having a
SUPER-GOVERNMENT controlling us. Its already hard enough to maintain
freedom here in the USA. How much more difficult it will be when the UN
or some group like that is in control of all nations?

>while in the car?

I have used one on several scanners before and gotten as good or better results than an antenna designed for scanner use. The only concern is the connector: If you purchase an adapter you will experience slight signal loss. Ideally, you'll want to cut off the old PL-259 connector and splice in one that fits your scanner (I'm assuming a standard BNC female coax connector). You'll also want to make sure the cable is good, and just long enough to reach the scanner. Don't let it get pinched in the door or anything like that.

WE need to find out the real situation here. Lets look into this and find out what mode they really are using now, and what the output power is.
I have scanned the range many times and have never found an active frequency.

What is the mode of in-flight phones?

What is the spacing?

What is the power level from the plane?

Are the frequencies still the same?

All,

I am looking for the best/better Windows 95 software to primarally control a Pro2006 with the OS456 board. I also have an AOR 8000 which it would be nice to control/program with the same software. I have a very old copy of SCANSTAR which I tried to load BUT it will not run under DOS! I also have a shareware version of Radio Manager. This looks good.

If anyone has recomendations, please reply to the group and my E-mail address.

Thanks,

brumey@ns.net

Mr. Nymon (if that's your name), I'm an electrical engineer with over ten years experience hands on. I've been a ham for over twenty years. I've tackled more IMD problems than I care to think about. I have even dealt with some pretty esoteric results of IMD concerning noise power ratios and the effects of linearity and group delay on analog baseband communications systems. I've also evaluated and designed 900 MHz telemetry gear for a major utility. In short, if I'm inexperienced, what kind of qualifications would you expect for someone to be regarded as "experienced?"

I've seen IMD used in professional literature far and wide. I've rarely seen the term "cross-mod." I was wondering what it meant. I'm not so pompous that I'm afraid to ask. You, on the other hand, weren't terribly forthcoming with a meaningful answer. From the stupid response you posted, I doubt you really know the answer.

A better reply was posted by D. Holford. It seems to make sense and it seems to indicate why I hear the term "cross-mod" so rarely.

Quit the posturing mister. Some of us really *DO* know enough to ask intelligent questions. If you can't answer that which you claim to know, and insult those who question you, your credibility is worthless as far as I'm concerned.

I had the opportunity to be present in a ground site once, and it was ACSB (amplitude compandered sideband). If a tech wanted to check an off air signal with limited receiving equipment, as being he totally forgot almost everything from the shop, he would best do it in AM. Hope this helps.

Dale

Hmmm...

Sounds to me like you are trying to say that "intermod" is created in
transmitter circuits and that "cross mod" is created in receiver
circuits. This would be important for a General Radiotelephone licensee
who was hired to find the problem and fix it.

On the other hand, both problems would be heard on a reciever as funny
noises. It seems perfectly fine to me for a radio operator to say she
was receiving intermod. She doesn't know what circuit is causing it and
does not care.

I also understand that any nonlinear electrical junction such as a rusty
bolt in a radio tower can receive RF signals, mix them and then
re-radiate them. Since this phenomanon does not happen in either a
transmitter or a receiver what shall we call it??

Yes, but would you agree that one could sound equally foolish if the
doctor trying to save the man wanted to know if injury was due to gun
shot or poison and they went on and on about the correct definitions for
murder and accident.

> >
> >This is the best analogy I can give to someone who does not have the

Yeah RIGHT!! You've "designed" all this and had no idea what Cross Modulation was!! Your so full of it your eyes are turning brown!

The only part of your story that I believe, is the part of you being a Ham operator. That part you didn't even have to mention.

> >license, it allows for the repair of cb radios. In no way can he repair
> >amateur equipment!.....Al

Correct me if I am wrong - A third class didn't allow you to do any internal repairs or adjustments to anything. That was a DJ license or something.

There is no license required to service CB radios.

There is no license required to service amateur radios - just need a ham ticket to put it on the air. It's just not practical to do amateur repairs without a license.

There is no longer a first or second class radiotelephone license. They were merged into the general radiotelephone op license over 10 years ago. The general is required only for servicing aviation and marine stations. (Servicing radios on board aircraft also requires an FAA radio repairman certificate).

Private land mobile, CB, fixed microwave, etc. do not require licensed service people.

Regards

I once heard an LAPD comm, where one officer was at LA County Medical
Center and the detectives were at a crime scene. They were waiting to hear
how the victim was doing, so they would know which set of detectives would
work the case (Division vs. HQ)

Anyway, the patrolman was in the ER, and he gets the detectives on the radio
and says, "Your vicitim decided to roll over and call it a life..."
indicating the victim had died.

I couldn't stop laughing at this deadpan description....Is it morbid? I
don't think so. Think of everything officers have to deal with in their
line of work. They are only called when Society has broken down. Where do
you find humor in a job like that?

Dear Scanmeisters

I'm looking for a handheld unit that uses and is easy on (long lasting) standard batteries.

I've got a Pro-26 that draws ~70ma (4 Batt) and a piggy little Pro-60 that slurps ~120ma out of it's 6 cells.

I realize that high performance scanners are going to need power to perform well but I still like to have an additional unit that would have long battery life for certain events.

Thanks for any help, opinions or observations

Starting August 13, 1997, the 10th day of the United Parcel Service
strike, Communications Electronics has an internet special on the
Bearcat 235XLT Trunk Tracker and the Bearcat 9000XLT.

Bearcat 235XLT Trunk tracker scanner $269.95
less UPS strike special discount -50.00
Priority mail shipping/insurance 34.00

TOTAL $253.95

Bearcat 9000XLT Alphanumeric scanner $344.95
less UPS strike special discount -30.00
Priority mail shipping/insurance 34.00

TOTAL $348.95

To get this special price, you must mention special offer code UPS13
when you call 1-800-USA-SCAN or fax your order to 313-663-8888.
Offer may be withdrawn at anytime and is valid only to United States,
Canada and Mexico addresses. The BC235XLT and BC9000XLT are new.

Delivery time by Priority mail is usually 1-4 days in the USA.
Overseas calls should call 313-996-8888.

I agree. I have number of animals and each has such a different
personality. They learn to understand a few words, and they greatly
desire to be close to you.
I am very opposed the animal rights wackos who just go overboard with
this issue.
However, we should treat animals with kindness and be mindful of their
needs.
I cannot stand to see animals mistreated. One day I was skating, and
this dumb guy had a very nice looking dog and was walking down the same
trail I was on. Each time the dog moved slightly the wrong way, he
smacked the dog with a long switch he was holding!
This was so bad, I could hardly stand it. The poor dog was doing all

it could to walk beside him on the leash, but the idiot still had to swat him. I wanted to take off my skates, jump the idiot and take away his switch so I could rip up his ass with it.
If you have ever trained animals, you know that only a few require a swat now and then. And, if you absolutely have to hit your pet, use a tube of rolled up newspaper that is soft, but makes noise when you swat them with it, but be careful. This can do far more harm than good..A pet cannot fully understand the problem nearly as well as your child whom you can talk with after having to correct him/her.

Pets are great, and they are so subject to their owners.

Please take good care of them!

>> >> Don't they both require more than one signal (or a wide baseband)? In
>> >> the end, isn't the result the same?

The result isn't necessarily the same because the cure is different,
depending on where the unwanted mix is taking place.

And to stick my oar in the water on this subject further... I've been a
Sr. Telecomm Tech for a very large Telecomm operation for over 25 years and
the only people I've ever heard refer to these unwanted mix products as
"cross mod" are hams who, in general, are not all that familiar with the
subject. They are generally called IMD for Intermodulation Distortion, or
Intermod for short. As stated previously by other, they can take place in
transmitters, receivers, and other physical devices containing dissimiliar
metal junctions such as tower section hardware, guy wires, wire fences, bad
coax connectors, etc.

To the best of my limited knowledge a trunked system is a computer system that selects one of a number of available freqs each time a radios is keyed. The radios on such a system are given a code or codes and placed in groups. When radio A is keyed the computer selects an available freq to transmit on and then opens a channel to all the radios in radio A's group. The carrier is left open for a period of time, as in a repeater system, then the freq is released back to the system. If I understand the system correctly the nice thing about it is when radio A and radio B start to communicate no other radios can break into or override their conversation. This eliminates the chance of someone wlaking over your transmissions. If I am wrong someone please let me know. The bad part of a trunk system, for us scanner users, is the frequencies are no longer dedicated to one entitiy. The police, fire, ambulance, etc can be heard on any of the frequencies. The freq they were on may not be the one selected next time.

4132. WANTED: Havasu City, Arizona freq

Newsgroup: rec.radio.scanner
Date: 1997-08-12 00:00:00 UTC
From: "S. Murphy" <steve@pactitle.com>
Message-ID: <33F09C3F.1D45@pactitle.com>
Source record: 188893
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I recently spent a few nights at the Crazy Horse camgrounds in Lake Havasu City, Arizona. During my stay we endured some severe weather that damaged the campground facilities and several RV's. I did'nt have much time to search for the frequencies being used by the campround's employees since I was too busy hanging on to personal belongings in 80 to 90 MPH winds!

The security and maintenance crews were using older Motorola portables with about 8 inch long antennas (VHF?). It appeared they were talking simplex back to the office. They might have been using a repeater for portable to portable communications but I can't be sure if I heard a squelch tail or not.

Any scanner enthusisasts that live in the area know what frequency or frequencies they're using? Or, would anyone with an FCC license database be interested in looking it up?

Please respond to steve@pactitle.com
Thanks in advance! 73's

Steve.

4133. ###Your Opinions Wanted!

Newsgroup: rec.radio.scanner

Attention All Scannists,
In an effort to provide everyone with the best knowledge available for purchasing a scanning radio, antenna, book or piece of software, I have created a User Opinions page. This page exists for you to post your personal reviews and thoughts of scanning related items.
I ask each and every one of you reading this message to consider the knowledge and experience you have gained from your monitoring and put it towards helping this effort.
No one expects a thesis to be written. Just your honest comments on what you do and don't like about a particular product. It can take but a few minutes yet make such a large impact to those of use who will make use of it.
To anyone who has ever used the Internet to do research before making a purchase, I think you can see how valuable a resource such as this can be.
Several people have already been unselfish enough to post their thoughts about items they have used. I thank you and hope that others will follow your lead.
To learn more, point your web browsers to

http://www.qsl.net/n2mca/OPINIONS.HTM

Thank you for your time and consideration!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

4134. Modify Pro-37's?

Newsgroup: rec.radio.scanner
Date: 1997-08-12 00:00:00 UTC
From: Peter Bako <peterb@stlabs.com>
Message-ID: <01bca431$480fd080$b323f7cf@peterb>
Source record: 188895
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Where can I find information on expanding the frequency range of a Pro-37 scanner? The Blue Angels are in town, but I cannot hear them since most of their frequencies are in the 200-300Mhz range which I cannot scan!!!

Any info is appreciated!

Peter

I think radio manager is very good for a progam that runs under
windows....Probe is about the best....is runs under dos, but it will
work fine under win95.(i have it and it works great)

I've settled on getting a Relm HS200, but I don't want to wait until the UPS strike ends to get it. (probably in the year 2005 at this rate :)

Does anyone know of a good, reputable, Relm dealer in north-eastern Ohio (in or near the Cleveland area)? Failing that, how about a Relm dealer anywhere in Ohio? I did try calling Relm's 800 number, but they didn't seem to be much help.

Thanks in advance.

Cellular capable Logic Board for the PRO-2042/35
This can be installed in either the 2042 or 2035 (installing in the 2035
it will upgrade the 2035 to function exactly as a 2042,,, all the
features that RS neglected to program into the 2035s CPU
ie,,,,not only is this cellular capable but,
no duplicate freqs. in the search and store mode
automatically skips over 000.000o channels
lock-out feature in the serach mode
prompts you when you are about to enter a duplicate freq.into a memory
I only have one left.

I read with interest all of the comments out there
about Tauzen's folly. There is something here that
everyone seems to be missing, I think. You see, it
doesn't matter WHAT you and I think, they are
going to do what THEY want to do, , , And that,
of course means, they will follow the money. I
watched a Democratic candidate being interviewed
on TV, and it went something like this. , . , . , . ,

reporter: What do you think of the color red?
candidate: Well, as I stated before, I think that green is great.
reporter: OK, but what about red?
candidate: Green is good.
reporter: But why won't you tell me about RED???
candidate: I keep telling you that green is a great color.

What's wrong with this picture?
He would NOT answer the question, but he SAID
that he DID answer the question.

They will pass this HR-2369 travesty, and NOBODY
will have any influence on it. The Congress critters know
that in a short time, all the fuss will go away, and everyone
will forget about this bill after it has been passed, and we,
the "servants of Congress" will focus on some NEW outrage.
And you know, , , , , , , , , , They're right!

>something.

Sort of... A second class was required to work on CB's and such... a
first class was required to work on class A broadcast facilities. A
third class allowed on to "operate" a two way radio (not covered by
some other license classification) and a third class WITH broadcast
endorsement allowed one to operate a broadcast station. A third class
with BC endorsement also allowed one to work on a class D radio
transmitter. (under 10 watts)

>There is no license required to service CB radios.

There was, back when the three radio telephone class licenses existed,
but that was also when one was required to have a license to operate a
CB as well.

>There is no license required to service amateur radios - just need a ham
>ticket to put it on the air. It's just not practical to do amateur
>repairs without a license.

Technically, I don't think a license is required to work on any radios
at all, but there must be an appropriate license holder available at
the time the radio is put up on the air, to verify prior to it going
on air, that the radio is operating within specs for the service it
is operating within. IE, for HAM radio, just an amateur's license
authorized for the frequency the unit operates on... for a broadcast
station... NO LICENSE REQUIRED (Yep, I've recently been informed of
this nearly decade old change)... as for other services, I'm not going
to guess as the laws have changed so much in the last 10 years and I'm
nowhere current on them.

But, IMO, IANAL, I would imagine that even if a license was required to
service a radio, as long as the unit testing was done into a non-radiating
dummy load, no technician license would be required until the unit is
ready to go back on the air, at which time the person with the servicing
license either checks the entire unit out, or gambles his license against

the confidence he has in those who did the actual service.

>There is no longer a first or second class radiotelephone license. They
>were merged into the general radiotelephone op license over 10 years
>ago. The general is required only for servicing aviation and marine
>stations. (Servicing radios on board aircraft also requires an FAA
>radio repairman certificate).

And "Third" was dumped... for what essentially was a "citizenship card."

>Private land mobile, CB, fixed microwave, etc. do not require licensed
>service people.

I wouldn't doubt this, considering that one need not have a license to
service a 50KW broadcast transmitter.

Mr. President -
I confess that I do not entirely approve of this Constitution at present, but Sir, I am not sure that I will never approve it: for having lived long, I have experienced many instances of being obliged by better information or fuller consideration, to change opinions even on important subjects, which I once thought right, but found to be otherwise....
....In these sentiments, Sir, I agree to this Constitution,with all its faults, if they are such; because I think a general government necessary for us, and there is no form of goverment but what may be a blessing to the people if well administered; and I believe

further that this is likely to be well administered for a course of years, and can only end in depotism as other forms of have done before it, when the people shall become so corrupted as to need despotic government....

Benjamin Franklin

Sorry to tell you this but...

Gates Energy Products was history as of about 2 years ago.

Their assets were purchased by Eveready and their AA technology incorporated into later versions of the yellow Energizer nicads (notice the dimpled anode cap). I would advise against buying any Millenium batteries you see on close-out because they are likely to be very old.

The Rapidchargers are still turning up - I see them at Radio Shaft occasionally. However GE/Sanyo makes a tiny 1-hour AA wall charger that does 4 cells and uses a lightweight switching power supply. It is Sanyo part# NC-3 and Hello Direct (http://www.hello-direct.com) has had it for $39. It uses the "Braun shaver charging indicator" ... a light which flickers more and more as the batteries peak. Of note, however, is that it charges batteries only in pairs - so be sure the cells you insert are of similar age, capacity and state of discharge.

Source record: 188758

A scanner friend came up with a great idea that really works well...

The AA nicads in my PRO-43 now last between 12-13 hours (takes six of them), but here is what he discovered you have to do:

-- buy a Millenium 1-hour AA rapidcharger...parent company is Gates, I believe...each charger handles 4 batteries...
-- buy Radio Shack's "Hi-Capacity" AAs, rated at .850 amps...
-- then, take a punch and small hammer and put a dimple in the positive terminal of each battery...
-- then put in rapid charger...

He told me this 3 years ago and I went right out and did it, and the batteries still work great...

Now, technology since 3 years ago may have passed by his discovery, but here's the skinny as it existed then....

-- the Millenium charger (each one about $18 then) were the only low-cost, 1-hour (emphasize 1-hour) chargers he could find....
-- they were optimized, however, for the Millenium AA cells, which I believe were rated at about .5-.6 amps...
-- He noticed that it took the normal time with this charger to charge the RadShack batteries (at that time, they were the longest-lasting AA nicads
-- even Consumer Reports gave them their highest rating)...
-- But then he noticed the Millenium AA's, which charged in an hour, had this dimple on their positive pole...
-- so he took the punch and did the same to the RS batteries, and it worked...

The charger will charge any kind of AA nicads without the dimpling ... in that case, the charge light is RED...when you have the dimpled batteries, the charge light turns GREEN, and then turns red after about an hour...which is when you can take the dimpled batteries out and use them...

B4 I did this, it would take 6-8 hours to charge the RS hi-capacity batteries...

In a perfect world...

But cordless phones are so cheaply built that their power supplies and
other supposedly linear sections can't keep up with the fluctuating demands
of the audio stages. Thus, a _strong_ AM component is present in most
stages, and this translates to very good SSB signal in addition to the
signal that is inverted in the frequency domain.

The net result (pardon the pun) is that it is trivial to "descramble"
frequency inversion cordless phones by going to LSB and dropping down in
freq an amount equal to the inversion carrier. Don't try this with your
local police department, though: their gear is built much better and all
you will hear is garbage.

Due to differences between NiMH batteries and NiCad batteries it is
dangerous to charge NiMH batteries with your NiCad charger. It takes a
special charger designed for such use and would add to your expenses.

There really is no definite rule in that regard. Most of the equipment purchased by the communications service industry does not fall into the ECPA's definition of a "scanner." A "communications receiver" regardless of frequency coverage is NOT considered a "scanner" and doesn't have to be cellular blocked if it has less than 4 programmable frequency "slots." A continuous tuning receiver covering ANY range of frequencies including cellular is perfectly legal for anyone to buy as long is has less than 4 "slots." Most equipment used by the industry falls outside of this definition. Actually there isn't much need for test equipment that covers cellular frequencies apart from equipment needed for maintenance of cell sites and that is available to anyone, again because such equipment is not considered to be a "scanner." I don't think the FCC or the cellular industry is too concerned about this "loophole," because this equipment is VERY expensive, $10K and up and while you could use such devices to monitor discrete cellular frequencies, it won't duplicate the function of a 400 channel scanner. The ECPA was meant to ban the sale and/or importation of inexpensive "consumer" style scanner receivers and has little bearing on test equipment used by the industry.

I take a 200XLT and a Pro-43 to nascar races and run them on
alkalines. I get about 20 hours on a set of batteries & don't have to
wait for them to recharge. The price of alkalines at places like
Sam's club make them cheap enough to toss. I run the scanners on an
ac adaptor in the house & alkalines for outside.

I DO use a rechargable on my other scanner. I run my Pro-2006 on a
Delco Voyager deep cycle marine battery - 8 hours a day, one month
between charges.

Frankly I wouldn't let a local shop touch it.

Send it to ICOM factory repair in Georgia or Washington state.

4171. HR2369/HR1964 I wrote congress

Newsgroup: rec.radio.scanner
Date: 1997-08-13 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19970813133201.JAA19252@ladder01.news.aol.com>
Source record: 188776

Well, I typed up my letter (4 Pages, never have been sold on the idea of one paragraph letters on complex issues), on HR2369/HR1964. Then I got the E-Mail addresses of all the Reps on the House Commerce Committee, as well as the senate telecom committee, who would handle the beast if it ever gets out of the house. And I got my local Reps House and Senate contact info. I found the following:

1. My local Reps and the some of guys who authored the bill DO NOT have E-Mail addresses. Quite unreal in this day and age. Some of these guys have web pages, but no E-Mail address, go figure. (Please read all about how great I am - just don't contact me because I could not care any less what you think or want, unless you have a beeeeg check in hand)

2. Vox Pop's web site quite clearly spells out the best ways to contact your Reps. E-Mail is last on the list. First are telegrams, then letters, then Fax's and finally E-Mail. They offer a telegram at discount rates, but with this many addressees, I can't afford it. I may still use it to write to Sidney Yates, my local Rep, who does not have E-Mail anyway.

3. There is also a mass E-Mail address for the House Commerce Committee.

4. The committee is out until they return on 2 September.

5. I sent my letters out E-Mail anyway, including a duplicate sent to the Committee address.

6. Instantly, my E-Mail starts getting bounced. Apparently when out of session some of these Reps cannot be bothered with receiving E-Mail. Sure wish I had a job that only requires me to work a week or so a month and collect checks and ignore the public the rest of the time.

7. Other messages get bounced because the Reps/Senators have posted incorrect E-Mail addresses. Amazing. When browsing through their addresses / web sites I got the overall impression that most of these guys were clueless and had their Harvard daughters set up their sites for them or something similar.

8. Almost all the mail sent to the Commerce Committee's address gets bounced.

9. The next day I get about 10 replies. All are form letters, and all but one are identical. Essentially they all implied they had no interest in hearing from anyone but their local constituents, and those good folks would have to re-send their letter in snail mail if they expected a reply or anyone to pay much attention to what they had sent. The other One said they would get back to me eventually.

What a democracy. I had hoped for at least one or two staffer replies. I know these guys are all like 70 years old and aren't up to date with modern technology, but don't they have one or two young hipster republicans on staff??? I am really just shocked at these folks' attitudes and the way they have come to operate. Who do they think pays their salaries? Unreal. Perhaps if I had sent a check for ten thousand dollars as an attached file my E-Mail would have had some responses. I would have been more than happy to get just one letter in strong rebuttal, but nothing? Just totally brushed off by all of them?

I say forget about writing to these politicians, take our case directly to the media, like everybody else does. Know any reporters??? Complaints should also be filed with every ethics watchdog group around, except for the House's internal group, which is a running joke. Try Common Cause for starters. Check the watchdog groups on Vox Pop's web site, too. Check back issues of MT for the details on how much money the CTIA contributed to each of these Rep's re-election campaigns. Make as big a stink as possible. How about some civil disobedience with the news cameras going in front of Tauzin's office. I'm telling you guys, the only thing these Rep's pay attention to, besides a fistful of dough, is media attention that paints them as the truly corrupt politicians they are. If anybody gets depressed or needs some motivation just remember what these pious people did to Bob Grove at their last hearing. You might still be able to get somewhere with your local city and county governments but forget about the fed, it's toast.

I'll tell you all what. I'm no militia member or conspiracy theory nut, actually pretty much a conservative myself. But the U.S. Senate and the House are in the process of selling the Bill of Rights and the U.S. Constitution and all of us to the highest corporate bidders. It wont be the "ZOG" that takes over, it will be giant multi-national corporations. I've always hated the gun nuts. I lived 30 years inside the City of Chicago and spent too much time dodging stray bullets, but now at least I see how they got to where they are coming from today.

Actually, I do like the part where they make 1934 Comm Act violations a criminal felony, wish it had been all along, then we wouldn't be where we are today. How many people have been prosecuted under the original 1934 act? (Not enough!). How many people have been prosecuted under 1986 ECPA? NONE!? Gee, I guess it really was such a giant, criminal problem, wasn't it? Over Ten years without a single person being charged under it. Could it be because it doesn't stand a chance in a constitutional challenge? Come on Congress, let's pass some more stupid laws, rules and regulations. We haven't got enough yet! Somebody is still having fun and the news media says we still aren't really safe from everything. A few foreign companies are still marketing goods in the United States - that sort of thing must be discouraged 'ya know.

But somebody might want to tell legal expert Tauzin that the last time I checked the FCC wasn't part of the Justice Department. I can just see these guys running around with guns and badges making arrests. I assume Tauzin has found the dough in the Federal budget for the hundreds of new

enforcement agents they'll have to hire and train. This couldn't have anything to do with the real agency charged with enforcing this stuff, the FBI, going "belly-up" on Tauzin's last finely crafted bill and him looking for some other agency to carry his torch, could it??? I want to know who Tauzin has in his pocket over at the FCC because I smell a big rat at work here.

I don't understand the fuss in the hobby community over which specific freqs would be banned, this is the newly designated "commercial radio service". Since the freqs are non-continuous it's almost impossible for manufacturers to block them out. In effect, this is a nationwide ban on scanners. More un-reasonable, un-constitutional and un-enforceable legislation. Thanks guys, isn't it time to vote yourself another pay raise yet? How about some more spending, you guys only get a third of my paycheck every week now, that leaves 2/3 more for the fed that it's not getting yet.

And as long as these frequencies have been converted to private ownership in the commercial radio service, and I no longer own any part of them or have any right to use them, or any implied interest in them, please have the commercial service providers remove their newly found private property from my land. Or, have them contact me regarding a possible rental agreement. I'd hate to have to go through the trouble of filing civil eviction suits. I'll need the dough, too, to pay for the new taxes to fund the new enforcement branch. Way back in '34 REAL legislators realized the public nature of RF signals and that a compromise was called for. Glad to see there's no room for that sort of backward thinking in government anymore. Privatize everything. Reduce the deficit. Anyway we can. Lets sell off Yosemite National Park to strip mall developers, too. Think of the money.

In the future your receiver will have 1000 channels. But all it will pickup will be info-mercials, talk shows and news programs that only have stories about their advertisers' great new products. Oh yes, and it will cost you 50 dollars a month. Happy Scanning (while you still can). Ted.

If the scanner charges batteries internally, then the charging circuit is
nothing but a current-limiting resistor and (perhaps) a rectifier.
A "Dumb" charger like this is no more dangerous when used on NiMH cells
than on nicads.

The problem with NiMH cells on handheld scanners are:

1. Nicad cells having similar capacity are available at lower prices.
2. NiMH cells self-discharge (go dead just sitting there donig nothing)
at 3 times the rate of nicads. If your scanner is one of those that
trickle drains the batteries to keep the memories alive, they do dead
even faster and you risk losing memory contents if you forget and
leave the scanner unattended on the shelf for weeks.
3. NiMH cells do indeed require slightly different chargind parameters
than nicads, and you will not get maximum capacity out of them unless
you are using a circuit so designed.

I think I've intecepted some airphone traffic in that area and the 944
MHz area back in the late 1980's on a Pro-2004 in AM mode. Other than
that, nothing much.
Chuck, who remembers the airphones were experimental at the time....

Newsgroup: rec.radio.scanner
Date: 1997-08-13 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.970813222752.1480A-100000@Stratus.CAM.ORG>
Source record: 188794
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,sci.electronics.misc

Of course, the solution to car radios tuned by synthesizer is to make the converter tuneable.

While it can make the design more complicated, after all you have to make a good variable oscillator and have a good dial for it, it does have advantages. If you have a good enough dial, you can tune over a wider range than the the 1 MHz or so that a broadcast radio tunes. If you make it so the car radio is tuned to the top of the AM band, you have less problems with images. WIth the car radio at a fixed frequency, you can put selectivity between the converter and the radio. And you can add a bfo at that fixed frequency for detecting CW and SSB signals.

These schemes were common in years gone by. It is simpler to build a converter than a whole receiver, so these things were often described in the ham magazines so beginners could get a receiver without too much work and cost.

And tuneable converters were quite prominent from commercial concerns. Gonset made some tuneable converters, as did Tompkins (remember the Tuneaverters?).

Hi!

Im looking for information regarding AR1000XLT.

A friend of mine bought it second hand and it came without the manual.

So any information will be greatly appreciated, especially how to remove
a lockout from a bank.

Thanks for your help.

Avi Levy.

Message-ID: <19970813013601.VAA22825@ladder02.news.aol.com>
Source record: 188821

The FCC doesn't determine it. It's up to the dealer to decide if the purchaser meets the criteria in the law. Just make up a letterhead on the computer with a name like Bay Area Telecommunications and in your letter say you're a cellular phone repair service and you plan to use the radio as service test equipment. Most dealers will ship with no problem. There is no enforcement mechanism, meaning the FCC doesn't send inspectors around checking dealers' invoices.

I am looking for some simple software to load frequencies into my AR8000. I don't need it to do anything special, just load them in. Not control the radio or anything. I'm also looking for a good interface to use. I'm about ready to get an Optolinx, but if it's more horspower than I really need I would appreciate an alternate suggestion.

Thanks

Thanks for the input Ed. I've heard the term "cross-mod" a few times
before, but never saw a hard definition of it. I was curious if it
was just somebody's slang or if it really was specific to some
sub/super-set of phenomena related to IMD.

I don't have the most current CHP freq list, but I've heard the Grape
channel identifier used for the Napa area. Actually, I thought it was
rather clever considering what the region is famous for.

Well now.

I haven't been to OSH since '95 (I missed last years, and couldn't go this year)... but I seem to recall paying $1 for parking, and something like $15 a day (maybe someone will tell me what the flightline pass price was this year for a member).

And, while the price isn't cheap, the only real complaints I've ever had at Oshkosh is the poorly trained (or, perhaps better stated poorly BEHAVED) parking attendants in the car parking area, and the poorly behaved CAP weenies who seem to thrive on the power they are granted for that one week in Wisconsin. (No flames here guys - I'm not dumping on 'volunteers', just the few morons that inevitably get thrown into the organized activities like Oshkosh).

To each his own I suppose - if you didn't like the show I suggest (sincerely) you find an organization and/or activity that you do enjoy. You certainly aren't alone.

While surfing about a week ago I came across a web site which offered a download of computer control shareware for AR8000. I downloaded the file (named RCSSAR8K.ZIP) which turned out to only be disk 1 of 2 !!.

I have looked for several days to find the original URL (or any other source of this shareware) as I failed to bookmark it.

There was a readme file with brief instruction and an email address for support by my mail is returned undeliverable (address was sasiltd@msn.net)

Any help would be appreciated. Thanking you in advance.

4220. HELP - need CHP air-to ground freqs.

Newsgroup: rec.radio.scanner
Date: 1997-08-14 00:00:00 UTC
From: garretw@aol.com
Message-ID: <19970814042801.AAA21291@ladder01.news.aol.com>
Source record: 188604

I have been working out-of-state for a couple of years and seems that the CHP isn't utilizing their normal air tactical frequencies for speed enforcement. They use to be on 42.340 (blue),simplex. I don't even hear the DART teams on the old freqs. I would appreciate any info, thanks.

Confused on the Interstates

It does seem unbelievable, but it does work. I used an old Knight R100-A for the same purpouse. It would probably be easier with a more stable rig, I had considerable trouble keeping the BFO on frequency. them old 'Hollow State' radios of the cheaper design tend to wander badly. OK for CW but SSB and Inversion reception are too hard for more than a couple 'curiosity calls' .

BTW, I wrote this method up some years back on the old FIDO net.

Good Signals...

<snip>

Not really. All the information you need to investigate this yourself is out there and easily accessable (http://law.house.gov/). Before you launch your next big panic attack, you might check your facts first, then post. Welcome to the *mis*information age.

Now let's take a close look at the proposed bill. If you read it, they are proposing a change to the text in section 302d of Title 47 of the US Code. Here is what it currently says:
-------------47USC302d-----------------------
(d) Cellular telecommunications receivers
(1) Within 180 days after October 28, 1992, the Commission shall prescribe and make effective regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of -
(A) receiving transmissions in the frequencies allocated to the domestic cellular radio telecommunications service,
(B) readily being altered by the user to receive transmissions in such frequencies, or
(C) being equipped with decoders that convert digital cellular transmissions to analog voice audio.

Notice they used the word 'cellular', which we know these days to mean the 800MHZ band. Now let's look at the proposed changes:
------HR2369 version of 47USC302d-------------
`(d) The Commission shall prescribe regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--
`(1) receiving transmissions in the frequencies allocated to any commercial mobile service (as defined in section 332(d),
`(2) readily being altered to receive transmissions in such frequencies,
`(3) being equipped with decoders that convert digital commercial mobile service transmissions to analog voice audio, or

`(4) being equipped with devices that otherwise decode encrypted
radio transmissions for the purposes of unauthorized interception.'.

Notice that references to the word 'cellular' have been removed and replaced
with 'commercial mobile service'. Of course 'commercial mobile service' is
defined in section 332d of Title 47 of the USC as being a for profit radio
service for the purpose of connecting to landlines. Basically that defines
Cellular and PCS as we know it today, but also whatever wireless phone service
they come up with tomorrow. Here's section 332d so you can read it yourself:
----------47USC332d----------
(d) Definitions
For purposes of this section -
(1) the term ''commercial mobile service'' means any mobile
service (as defined in section 153(n) of this title) that is
provided for profit and makes interconnected service available
(A) to the public or (B) to such classes of eligible users as to
be effectively available to a substantial portion of the public,
as specified by regulation by the Commission;
(2) the term ''interconnected service'' means service that is
interconnected with the public switched network (as such terms
are defined by regulation by the Commission) or service for which
a request for interconnection is pending pursuant to subsection
(c)(1)(B) of this section; and
(3) the term ''private mobile service'' means any mobile
service (as defined in section 153(n) of this title) that is not
a commercial mobile service or the functional equivalent of a
commercial mobile service, as specified by regulation by the
Commission.

So if you or anyone else have read this far, I have one final question and
thought; After reading this, do you still believe this is a dangerous bill?
Well you shouldn't take my word for it. I'm just some guy posting to the
USENET -Check it out for yourself!

Trunked systems, in layman's terms, frequency hop. A conversation between two deputy fire chiefs may occur on one frequency and then suddenly, during a pause in the transmission, the conversation will jump to an entirely different radio frequency. In the meantime, two sewer workers, in the same city or county as the fire chiefs, may suddenly occupy the first frequency. Thus, it becomes almost impossible to follow a complete train of thought.

Good point - but the charging current is usually something like C/16
(based upon the capacity of, say, a 600 mAH nicad) so it really won't
generate enough heat to damage even a fully charged NiMH cell unless you
cook it for days.

I have an AOR-1000, actually, I have 2 of them. I listen to one while the other is charging. The WFM filter is wide enough that you get good quality FM broadcast and Television audio. Right now, I am at work with my AOR-1000 hyere in hte data center. I have punched in 956.435mhz, that's one of the MUZAK frequencies.
this happens to be the pop music channel. They also have an easy listening frequency that I think is around 956.35.

This is what I've got for air-ground, however it's not often that I'm in
the area of the "Air Bear" so I've never tested 'em.

>A "Dumb" charger like this is no more dangerous when used on NiMH cells
>than on nicads.

Actually, yes, using a NiMH battery in place of a NiCad can be dangerous.
As you have pointed out in the paragraph below, NiMH batteries have a lower
internal resistance. (That's why they self discharge more quickly than
NiCads.) Consequently, a cheapy charger designed to constant current charge a
NiCad battery will charge the NiMH battery at a higher current rating causing
a potential for overheating of the battery and associated circuitry.

Ed

Scanner laws like the above will have no deterrent on criminals just like
gun laws do. The bad guys will get them anyways, that's why they are
called criminals. All these laws do it hurt the honest person since
criminals break the law anyways. Anyways the robbers, rapists, and other
crooks could be put in jail without any scanner or gun laws since those
activities are against the law anyways
Chuck, just some thoughts....

Ok i was listening to 453.85mhz and heard a cop trailing a car and talking
about drug dogs
well that freq. is (in my area) VFD. so this was strange
well i wend and hooked up a better ANT. and then i heard it (the same
conversation) on 441.55mhz now i was realy confused. i think it is a double
but a double of what channel?

i looked both channels up in the police call and there were only a few
things on the 453.85mhz
in my area and the freq. 441.55mhz was not even listed i dont know where i
got this freq to start with but i had programed it before and when i went
to program a different freq in the slot it was in
i heard it the same conversion
so help me!
441.55mhz has alot more noise than 453.85mhz
please mail me

Was examining the latest Pacific Ocean high/low altitude enroute charts ...
and spotted a frequency wasn't aware of before....

128.95 is used by airliners over the Pacific communicating with one
another...

Sure enuf, 10 minutes after entering into the 2006, heard two airliners who
had taken off from Seattle and they were chatting...one flight was headed
to Hawaii and another to Japan....

If you're into monitoring HF aircraft ops over the Pacific, and don't have
these charts, you might want to consider getting from NOS (National Ocean
Survey)...they're great...show all the routes and reporting points...freqs,
etc...and a great section on operating rules on these routes...overall,
lots of good stuff if you're into monitoring aircraft over the water...

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectrom SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW,

FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on

conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob

Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units.

DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a

quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor.

Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88

-108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker,

and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no

FR2516 10 X yes yes
FR2517 10 X yes yes
FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

I won't touch the customs part, but I think one would be hard pressed to find a company with better customer support.

RE: NYC News Choppers

Channel 4 WNBC uses 450.387 and 450.537
during the news- you can hear tv feed so
reporters know when to begin.

You might want to search 450.00 - 451.00
also 455.00 - 456.00. Some of these
transmission will be scrambled.

4261. Bearcat BC170 - Ever heard of it?

Newsgroup: rec.radio.scanner
Date: 1997-08-14 00:00:00 UTC
From: Mark Smith <smith@news.it.gvsu.edu>
Message-ID: <33F3C1D1.34E6@news.it.gvsu.edu>
Source record: 188645
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello,

I have been reading this group for over a month and have not heard any mention of the bearcat BC170. Am I the only one on Earth with this model? I've been to Uniden's web site, every scanner page I can find and yet find no mention of the BC170. If any celluar mods are available for this unit, I'd appreciate any details you could provide.

Thanks for the help!

Mark

Message-ID: <33F2DA1D.6E5F@iw.net>
Source record: 188698

I seem to be having some trouble with my newsreader (Netscape). It will show 30 or so unread messages, when I click to retrieve them the number drops to 4 or 5 and only that many show up. I must have screwed something up in my settings. Any ideas? Please reply by email as I may not see it in the newsgroup until I get this problem fixed.

Thanks.

Scott

>A "Dumb" charger like this is no more dangerous when used on NiMH cells
>than on nicads.

Actually it can be dangerous. Since, as you have pointed out below, NiMH
batteries have a lower internal resistance, (that's why they self discharge
more quickly), then a constant current cheapie type charger designed for the
higher internal resistance of a NiCad battery will force more current into the
NiMH battery posing a potential overheating condition.

I've heard "Air 31" operating on 45.02 MHz, the frequency is designated
the "Ivory" channel.

I've heard this frequency used in the San Jose Area (Highway 85, Almaden
Expressway to Satatoga Avenue), Stocton area (Interstate 5, south of
205), San Mateo County (Interstate 280 near Canada Road) and Solano
County (Interstate 80 near Redtop). All within the last 6 months.

Regards

Ed

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229

4285. NFL Football frequencies?

Newsgroup: rec.radio.scanner
Date: 1997-08-14 00:00:00 UTC
From: douglas@netcom.com
Message-ID: <douglasEExD9I.A6t@netcom.com>
Source record: 188719

Went to a 49'ers football game last week and had 50-yard line 2nd row tickets, close enough to the home team to yell evil things and know that they were heard.

I brought along my Opto Scout and AR8000 and was able to find little more than some news feeds. There was so much RF floor noise that the Scout could pick up hardly anything.

I scanned all over the place and just found lots of news feeds for the radio and TV stations. Managed to find parking security, but that is about it.

What we had hoped to find was the freq for the radio that the quaterbacks have in their helmet. Before a play is made, the coaches make the call from the box and the quaterback has a tiny radio in his helmet that alerts him to the new play.

Anyone ever figure out what this freq could be or have any wild guesses?

Thanks!

4291. Re: What ar Intermod Problems

Newsgroup: rec.radio.scanner
Date: 1997-08-14 00:00:00 UTC
From: a1leenj0hn@aol.com
Message-ID: <19970814024300.WAA20511@ladder02.news.aol.com>
Source record: 188725

For those who insist that IM is really cross-mod, and/or cross-mod is really IM, I respectfully offer my opinion.

Cross-modulation and intermodulation are two distinctly different distortion phenomena.

Quoting from the excellent book, Communication Receivers, by noted RF expert Dr. Ulrich L. Rhode (himself an Amateur Radio Operator, KA2WEU), and T. T. N. Bucher, Mc-Graw Hill, 1988, p. 72-73:

<begin quote...>

If we think of an amplifier or mixer as a device whose output voltage is a function of the input voltage, we may expand the output voltage in a power series of the input voltage,

Vo = summation of (An * Vi^n)

where A1 is the voltage amplification of the device, and the higher order An cause distortion.

Since signal and interference are generally narrow-band signals, we may represent Vi as a sum of sinusoids of different amplitudes and frequencies. Generally (A1 sin (2 pi f1 t) + A2 sin (2 pi f2 t)) ^ n, as a result of trigonometric identities, produces a number of components with different frequencies, m f1 +/- (n-m) f2, with m taking on all values from 0 to n. These intermodulation (IM) products may have the same frequency as the desired signal for appropriate choices of f1 and f2. When n is even, the minimum difference between the two frequencies for this to happen is the desired frequency itself. This type of even IM interference can be reduced substantially by selective filters.

When n is odd, however, the minimum difference can be very small. Since m and n-m can differ by unity, and each can be close to the signal frequency. If the adjacent interferer is delta f away from the desired signal, the second need only be 2 delta f / (n-1) further away for the product to fall at the desired frequency. Thus odd-order IM products can be caused by strong signals only a few channels removed from the desired signal. Selective filtering capable of reducing such signals substantially is not available in most superheterodyne receivers prior to the final IF. Consequently odd-order IM products generally limit the dynamic range substantially.

Other effects of odd-order distortion are desensitization and cross modulation. For n odd, the presence of the desired signal and a strong interfering signal results in the product of the desired signal with an even order of the interfering signal. One of the resulting components of

an even power of a sinusoid is a constant, so the desired signal is multiplied by that constant and an even power of the interferer's signal strength. If the interferer is sufficiently strong, the resulting product will subtract from the desired signal product from the first power term, reducing the effective gain of the device. This is referred to as desensitization. If the interferer is amplitude-modulated, the desired signal component will also be amplitude-modulated by the distorted modulation of the interferer. This is known as cross modulation of the desired signal by the interferer.

<...end quote>

Note that IM and cross modulation are different in that IM is a result of the presence of the energy at the difference frequency of two undesired interferers, regardless of where it is created. However, cross modulation is the result of the d.c. (really baseband) energy created within a non-linear (usually active) device modulating the effective gain of the device. In effect, the undesired inteferer's modulation is transferred to the desired signal, corrupting it. Cross modulation can also manifest itself when a nearby narrow band additional interferer is splattered onto the desired signal when it is cross modulated by the first interferer. Hence, cross modulation is more of a problem when the interferers have an wideband AM modulation component, e.g, TV broadcast.

End of today's lecture in RF Electronics 101. Now go do your homework. :-)

Sorry, I don't have a PRO-2020 schematic. Check/replace any
large value electrolytic capacitor in series with the audio
output and speaker.

I've replaced them in several base scanners to fix low audio
or audio which breaks into oscillation.

Oh yes... postscript to my own posting. I forgot to mention that NiMH
batteries have **HIGHER** internal resistance than nicads. That is why
they are unsuitbale for truly high-current applications like power tools,
radio-control vehicles, etc. The self-discharge is due to hydrogen
diffusing through the porous electrodes.

Do not agree. I use on my walkman both nicad and nimh and use same
charger.
I care not to have memory on nicad, but nimh have more capacity
(1200mA).

>facility in the Northern New Jersey area to fix it.

What is wrong with it? R100's are pretty rugged little receivers. If it is less than a year old it is under warranty. If you bought it from us the warranty is two years.

We service in house anything ICOM except amateur. You're welcome to send it, but it would be a good idea to call first and discuss the problem.

ICOM's Georgia facility has been closed for a long time. The new California facility apparently stocks no parts and has to order every little thing from Japan. Last I heard they closed the entire facility for 2 weeks waiting for parts, at least according to their answering machine message.

I own the American model of the Uniden BC 200XLT, and mine does 29-54
MHZ out of the box. Just try punching them in, remembering the "." so
it doesn't interpret 30.1 MHz as 301 MHz

Well, each team is different I think. I've heard that the New England Patriots use 464.9375 for their quarterback, Drew Bledsoe. The Cowboys are using 461.6125, I think. However, I would imagine that everything would be scrambled.

Hope that helps..

I've got one and it works great. I don't get Europe or Australia, but I
have a long wire hooked up and it has a GREAT receiver. Be sure and get
the one you're thinking about getting. The one right below it does not
have the tape player built in. I wish I had it so I could record code
and play it back if necessary to get the whole QSO.

In article <5su6gl$r59$1@thefuture.qualcomm.com>, KF6BBL@qualcomm.com
(Bill Paul) wrote:

>Of course 'commercial mobile service' is defined in section 332d
>of Title 47 of the USC as being a for profit radio service for
>the purpose of connecting to landlines. Basically that defines
>Cellular and PCS as we know it today, but also whatever wireless
>phone service they come up with tomorrow.

Basically CMRS includes:

Specialized Mobile Radio Service
220 MHz commercial services
PCS, including both narrowband and broadband
Public Coast Stations, including HF and VHF stations
Cellular
Air-Ground
Offshore Radio Services
Interconnected stations in the (former) Business Radio Service
Most forms of paging, including what have traditionally been
called private carrier paging systems
Conventional public mobile services

The exact frequency bands to be covered will be
established by the FCC in the rulemaking proceeding
that the bill requires the Commission to launch.
Some of the bands will be obvious, such as the
cellular bands already barred from scanner coverage.
Others will be toughies and it remains to be seen
whether the FCC will take an expansive interpretation,
or a narrow one and hope that the bill's proponents
don't call them on it.

A related issue is whether the FCC will retroactively
apply the mandated denial of equipment authorization.
Doing so could cost manufacturers and resellers big $
because they couldn't sell products already made.

The bill goes considerably beyond outlawing CMRS
frequency coverage in scanners. It breaks the
connection between interception and divulgence
necessary to establish a violation of the Communications
Act; it introduces the new term "receipt" of signals
(not necessary to prove "interception," just "receipt")
and it directs the FCC to investigate alleged violations
of the bill's provisions regardless of what other

agencies are doing.

I find the bill to be the most extensive effort yet to throttle the "electronic stalkers" as they were called in House hearings.

I have been looking for a mod to enable 800mhz reception over the
forbidden band with my Yaesu FT-300M. This is is the interesting reply
that I got from one ham

73
Zack Schindler
N8FNR

Zaax..
Good morning first.
I am happy, for your reply,I didn't thought it was going to be so
soon.
Do you use Powwow?
I didn't understood very well your question: How do you like the
rig so far?
But I think the answer is yes I like it very much, it have a very
diferent design, a lot of usefull functions (despiste some very useless
functions like the dual watch), it is small, and powerfull, and have a
very
wide frequencies range (my own go from 110.995 to 180.995, 300.995 to
520.995 and 800.995 to 999.995).
From what the ham told you DON'T believe him, it CAN be done I am
completly sure about this. I will explain:
Some time after I bought my Ft-3000 the salesman who sell the
radio for me
came and told me that he knew a japanese man who knew how to unblock the
cellular band for me (the act of listening frequencies is not ilegal here
in Brasil, you can listen to everything because no one is owner of a freq,
but of course you can't say it to anyone, interfere with the comunication
or use it in any way, you must keep it for you only, so you can't
prejudice anyone) but the man would charge the service about US$45,
because
I already had paid the almost same amount to this salesman to modify my
radio (MARS/CAP only, not cellular) I few that I was deceived, because
what
I paid would include the cellular unblocking, and so I didn't paid him,
and
I made the promise I would find it on the Internet. After a long time (I
have my Ft-3000 since it's earliest days) trying to find out the
son-of-marvelous-mother modification, I contacted the salesman again and
asked him if he know anything about the mod, what he told me, if it is
true, is very interesting: the unblocking mod is not a fisical mod, but a
software hack; to unlock the cellular band you must enter a number
sequence
on the mic's keypad, you don't need to open the radio, just enter the

apropriate code on the mic; the salesman told me another thing, that he was
not very sure but maybe I said maybe, the code you enter on the keypad is not the same for all FT-3000 radios, because part of the code must have the
serial number, or part of it in the sequence, but that is not bad, the real bad news is that (he is not sure about this too) you must have the ADMS software for the FT-3000 to make the hack, for me this is no bad cause
I bought it with the radio, and personaly I encourage you to buy it, because it makes the use of the radio a LOT more easy. Another fact that make me sure that it is possible to unblock the cellular band is the fact that I sent an e-mail to Yaesu and they told me that they was not authorized to give me this and MARS/CAP mods. And if it was not enought I was able to enter any cellular frequencies in the radio memory using the ADMS even those frequencies withing block range!!!But again I was not able to freely tune up or down.
I even ofered to the japanese man a considerable amout of money if he tell me the hack, but he didn't told me and I think he is not going too. Another
thing I know is that this information is only avaible in Japanese technical
literature.
My friend, THESE HACK CODE BECOME A VERY PERSONAL MATTER FOR ME, I WANT TO KNOW IT, HOW TO DO IT, HOW IT FUNCTIONS, AND LAST BUT NOT LEAST I WANT TO BE THE ONE WHO IS GOING TO MAKE IT ON MY RADIO. I am sure you can undestand me. Every information leaks, it is just a time matter, like Einstein said on Red Alert, ''TIME WILL TELL, SOONER OR LATER, TIME WILL TELL''
These is it, let's pray for some luck and wait that these soner or later
be soon and not late.
Good luck.
Felipe Castanho

>naughty cell calls--Uncle Sammy will spank you if you are caught!)

Not YET! It *is* illegal (per FCC release) to modify scanners in a
quantity which could be interpreted as "manufacturing", but until
the latest pacifier bills pass, it is not illegal to modify a scanner
on a scale not viewed as "manufacturing".

>I'll forward once again the theoretical mods for these--one might like
>to download them for future study (remember, it is illegal to modify
>them!!) Check for my post.

The Pro-2004 mod (with pictures) is available at:

http://www.io.com/~tweek/2004/

While I have pictures of a Pro-34 mod, I am still hessitant to put
put up a similar page due to the skill level involved. Due to the
latest threats in congress, I think I will be putting it up despite
the higher skill level required.

From: Ian Murray <ianm@sentex.net.no-ads>
Message-ID: <33F3D4EF.2FB1@sentex.net.no-ads>
Source record: 188651

Excuse me if I am intruding with my naive question; I know almost nothing about scanners. I went to my local Radio Shack to check them out today, and the sales person said that most of the police, fire, etc, services are going to 900 + Mhz frequencies. Does this mean that the Pro-29 scanner that I am considering buying, which says 800 Mhz on it, would not be able to pick up the police and fire services? I live in southern Ontario. BTW, the scanner is $199 Cdn. Thank you for any help.

All;

I've found a nice Web page that has the bill in question, some
analysis, a list of Congresspeople and a sample letter to send.

http://www.bearcat1.com/alert.htm

I've also posted this message in rec.radio.shortwave and
misc.transport.rail.americas, as the bill is so broadly written that it
could be interpreted to prohibit reception of all kinds of "ute" traffic in
the shortwave bands, as well as railroad transmissions on a scanner.

Visit http://www.geocities.com/CapeCanaveral/Lab/1060
They maintain a long list of computer interfaces (freeware or
commercial products) which you can use. Most require a special
interface ($10 in parts and basic knowledge of a soldering iron) or a
Sound Blaster.
You can do things like decode POCSAG paging data, decode DTMF and
CTCSS tones, decode Motorola trunking systems, etc.
Hope it helps!

No, they are not blocked. A tactical channel is usually a repeater or
a simplex channel which can be used around the fire scene, leaving the
main channel open for other communications. Pick up a copy of Police
Call from Radio Shack or do a little research on the net and you
should be able to find the frequency. If not, get the Police Call and
enter every channel licensed as F or L service types into your
scanner. Scan them and lock out unimportant people (dog catchers,
etc.) and when they have a fire, you should hear the channel. Write
down the freq. and you're done.

I'm guessing the $175 is a typo for this old unit. The last 2 units seen like this went for $65 and $75 respectively at hamfests and had the rapid chargers with them too. Since $175 would buy you a recent model used HT with 100 memories or more, Please tell me this is a typo.

4351. MultiMode Digital Decoder Software For Macintosh Available

Newsgroup: rec.radio.scanner
Date: 1997-08-15 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R1508972257420001@news.digex.net>
Source record: 188673
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.scanner,rec.radio.shortwave

I'm proud to announce the latest version of MultiMode, the freeware digital mode decoder for the Mac.

Version 0.4.1 now adds support for ACARS, and decoding WWVB time signals, in addition to the CW, RTTY, FAX, and SITOR modes previously decoded.

A copy can be download from my web page, at the following URL:

http://www.access.digex.net/~cps/sss14.html

Please note that MultiMode requires a PowerPC Macintosh or clone.

I've just added support for ACARS, and done some other major upgrades to MultiMode, so I'm anxious to get feedback.

I would have to agree that the path taken from "free press" to "right to know" was a bit strange. However, the Constitution does imply the right of the public to know what its government is doing.

First, the Supreme Court has held (I don't have the cases handy, but I've spent a few semesters studying ConLaw and I know these rulings have been made) that restricting access to speech is legally the same as restricting the utterance of that speech.

Second, the Constitution reserves all rights and powers not specifically enumerated to THE PEOPLE. The Fourth Amendment preserves our right against governmental intrusion (the actual "Right to Privacy" that does exist in law), but the Constitution does not give the government the right to evade surveillance and oversight by the people.

I agree completely with your sentiments. Rather than seeking to ban
public access to the activities of their public servants by monitoring
the radio, why not simply enforce existing laws. Being a member of a
NY police agency, did you ever prosecute one of these boobs for OGA?

A better way to find out about local laws is to visit your local law library and do a little research. The police may not know whether there is a law against something if they haven't dealt with it before. This can lead to one of two problems:

1- As in my area, the police just don't know that my city has an ordinance banning portable police and fire receivers.

2- Police officers who feel that "there ought to be a law" may tell you that something is illegal because they don't like it, or because they believe that it is illegal.

Uh-huh. With misinformation spread about by well-financed lobby
groups, one of which represents Qualcomm. Now isn't that special?

>So if you or anyone else have read this far, I have one final question and
>thought; After reading this, do you still believe this is a dangerous bill?
>Well you shouldn't take my word for it. I'm just some guy posting to the
>USENET -Check it out for yourself!

Not as dangerous as HR 2369, which is much clearer in its intent to
modify Section 705 of the Communications Act to outlaw "interception
or" divulgence of radio communications. HR 2369 is also written by
Congressmen who were purchased several reelections ago by the cellular
industry, of which Qualcomm is a part. "Just some guy" indeed. Now
who's putting out "misinformation"?

Oh, Uhh ...
This one is looks as if it will start a relegious war.....

Since all of them are manufactured against the same industriel
standard, they're supposed to be pretty much the same.

Based on experience I can say that in fact they are.
Have had good as well as bad luck with all kinds of manufacturers.
The more expensive ones are not nessarily the better ones.

Also keep in mind that it has a very big impact on their lifetime
how you treat them. None of them like discharging them to the
bottom or overcharge them, for instance.

However be carefully when buing EXTREMLY cheap no name taywanese ones.
Seems you have bad luck with them more often.

But who can tell...

My advice:
Buy reasanible priced name brands if you want to take no risc.

Regards,
Friedhelm

Some scanner enthusiasts DO let there batteries cook for days! I stand
corrected on the higher internal resistance of NiMH batteries, though.

Of additional concern to you should be the quality of the battery as well as it's mA hour rating. I've worked with dozens of different HT batteries, all the same basic mA hour rating, but some last much longer than other per charge. Motorola leads the pack in my opinion. On the other hand, I don't they they make generic cells like AA cells.

People, with the Feds tightening up restrictions on scanners (as if guns weren't enough!) it would be advisable to purchase (second hand, if available) any of the following scanners listed below:

(Remember, it is ILLEGAL to modify any scanning device to receive naughty cell calls--Uncle Sammy will spank you if you are caught!)

Radio Shack Models:

Pro-23,26,34,37,39,43,51,2004,2005,2006,2022,2026,2030,2035,2042

I would welcome a Uniden/Bearcat list.

I'll forward once again the theoretical mods for these--one might like to download them for future study (remember, it is illegal to modify them!!) Check for my post.

KC5KTO's Radio Shack Scanner Modification Page

This page contains information on several of Radio Shack's scanners. If there's any mods for a particular scanner, it is listed in the scanner's information section, along with any information available from Radio Shack through their on-line information service. Not all scanners have mods, though, and not all have information from Radio Shack.

Please don't email me asking for mods or information for a particular scanner. What is on this page is what I've got. The mods available on the Internet are a small subset of all the mods that are available, so you might consider purchasing one of the many mod books put out by Bill Cheek and others (a list of mod books is planned in the near future), if you're looking for anything that's not here.

A technique called virtual downconversion makes it possible for some post-ECPA scanners to receive cellular broadcasts, so don't take the NO that you see for them as the last, final word (unless, of course, they didn't pick up 800 MHz to begin with). When I find information on virtual downconversion mods or companies who do them, I'll put it up for the affected scanners.

I've got some modification cutoff dates listed for some scanners, but they may be wrong. If you know for sure that they're wrong, or you have any additional information that you'd like to pass my way, let me know. A general rule of thumb is that any scanner manufactured after April 1994 is not modifiable for cellular coverage (yes, there are some exceptions, notably the PRO-51).

This page is not affiliated with Radio Shack in any way. Radio Shack is a trademark of Tandy Corporation. Read my disclaimer for further information.

VL/A/VH/MA/U/8

Key
Channels (xx/yy) where
xx - # of banks
yy - # of channels per bank

Ranges (exact ranges vary from unit to unit):
VL - VHF-Lo band (typically 30-54 MHz)
A - Civilian aviation (typically 108-136 MHz)
VH - VHF-Hi band (typically 136-174 MHz)
MA - Military aviation (typically 225-380 MHz)
U - UHF band (typically 380-512 MHz)
8 - "800 band" (typcially 800-999 MHz)

Decoding Radio Shack Date Codes

Decoding the date code on your Radio Shack scanner is really quite simple. The date code consists of a number (from 1 to 12), followed by an "A", followed by another number (from 0-9). The first number represents the month of manufacture, while the last number represents the year. (The "A" acts as a separator.)

For example, the date code

7A4

means that the item was manufactured in July 1994. Pretty simple, eh?

Note that the decade can't be precisely determined - "7A4" could also mean July 1984. This shouldn't really be a problem, though.

Does anyone know the frequency/-cies for the UN Security?

The UN General Secretary Kofi Annan with (swedish) wife will be here in Sweden together with the Swedish Royal Family tomorrow, just a few kilometers from where I live.

For your info: the Swedish secret-service-people use 448.100 MHz.

All help/info very much appreciated.

Best summer-regards, Lennart

Although anything is possible, I doubt it was DEA.
I had the pleasure of sitting at a dispatch counsel for one of the dea
offices. All transmissions are (digitally?) scrambled.....resulting in
nothing but "white noise" on a standard scanner.
The exception being the dipatcher has the ability to "un-encrypt" radio
traffic on any given freq.
Not sure exactlyl what all the techno "mumble jumble" is regarding their
setup, But they have a room called a "crypto room" that exsists solely for
the Encryption of Radio traffic.
Rather Impressive setup......

A couple thoughts on what seems like a great idea
for a better light on the radio. I have done very well at doing mods
by following a set of instructions where there is not much left for me
to figure out. In this situation,which is something that I'dlove to do
tpo mine (and perhaps something similar to give a little more klight
to a Pro-2021 with a dim backlight). I think the thing I wonder about
is this, how does one know the power requirements of the new light
that is going into the radio and of the power being supplied by that
circuit in the radio?
I may be ahead of myself here, I guess that a service manual would
tell this for the Pro-43......anyhow I'dlike to hear more about this
if I could.
Thanks a lot!

From: Steve@swssec.com
Message-ID: <33f6b466.33071399@news2.ibm.net>
Source record: 188738

Jack Hendrickson <hendrickson@mailbag.com> wrote:

>Does anyone out there have a reliable discriminator (base band audio)
>modification for the Icom R-7000. Thanks for your help.

Hello Jack,

Here is how to pull discriminator audio out of your R7000 to use with various decoders that want clean audio. Use a short piece of shielded cable to the spare jack on the back of your R7000:

Best is junction of C131, C84 and R99 on I.F. board. Take output through a .01-.05 to block DC present at this point.

Not quite as high an impedance, but easier to get to from the top of the board, is junction of R97, R99, C87, C115, etc. This is the other side of R99 as preferred method. Again need to go through a cap.

If you have the service manual or schematic, these points geographically are between Q13 and X3, 1/2 way down and 2 inches in from the right of the schematic.

Be careful not to load the discriminator output too heavily, as it is a high impedance point.

Hope this helps.

Steve

>interface.

Wrong!

There isn't a Plug-n-play computer interface for the 2004, but that
does not mean that there is "no such thing." With a little bit of
effort, one could interface a computer I/O to the keyboard and display of
a 2004 and come up with download and upload frequencies to the scanner...
add another I/O line to the signal strength circuit, and one could even
have the computer run the scanner through searches of new frequencies.

I suppose that if you really want to get involved, and hack into the
actual scanner buss, you could make the interconnection protocol a
bit more efficient in speed.

Never say "never", Barry, for you just might be proven wrong.

4386. ICOM receivers no longer restorable. Owners READ!

Newsgroup: rec.radio.scanner
Date: 1997-08-15 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <33f7c45a.37155835@news2.ibm.net>
Source record: 188742

Hello list dudes and dudettes,

I just learned that ICOM has redesigned their current R10 and R100 receivers so cellular freqs no longer can be restored. The earlier models of these two could be restored easily.

So there now are three versions of the R10 and R100: unblocked, blocked but easily restorable, and blocked not able to be restored.

R7000's were available both ways, but it no longer is in production and the few units remaining in inventory are unblocked, so usual restrictions apply.

R7100's also were available both ways but are out of production and out of stock. No big loss in my opinion.

R8500's currently are available blocked or unblocked. Persons have reported that the blocked ones could be restored, but could not provide verifiable details. We were unable to unblock them. ICOM claims the versions shipping now can *not* be restored, and in this case I believe them.

So you guys who have earlier blocked receivers up till now may be sitting on units which soon will sell at a premium over ones now being manufactured.

Factory or aftermarket unblocked even more so.

Don't shoot me I'm only the piano player.

We still buy and sell ICOM stuff and will service all ICOM products other than amateur transceivers. If you send us an unblocked receiver for service it will be returned unblocked.

And vice versa.

All ICOM equipment, receivers included, purchased from us carry a TWO year warranty. Receivers from other dealers only have one year. We were selling their products back when the company was called Inoue Communications and ICOM had not been born yet.

ICOM info on our website.

4388. Re: Scannists interfere with - insert incident here...

Newsgroup: rec.radio.scanner
Date: 1997-08-15 00:00:00 UTC
From: radioman@localnet.com
Message-ID: <5t0jcm$se5$1@usenet76.supernews.com>
Source record: 188744
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Guidlines were well thought out. Following them would leave no room for an individual to get jammed up. Some people do not realize it but getting on a scene (crime, accident, fire etc) quickly and safely is the main objective of a police officer. Once there he / she has many obligations, varying from incident to incident. Above all is the preservation of the safety and lives of individuals in the proximity of the scene. Therefore, does it seem unreasonable to have those not directly involved with that particular incident be at a safe distance and out of the way of the officials attempting to do a job.....? I knw that it isn't. Sometimes the problem comes in that those in quest of a better, closer look are spoken to gruffly by the officers. The person feels they have an inherent right to be wherever they wish to be. The officer feels that the individual should have the sense to keep a safe distance and before you know it, ther are bad feelings and things may escalate.
For a minute, put yourself in the boots of that officer. Things are hectic, you have a job to do that probably will undergo rigerous "Monday morning quarterbacking" by your bosses, the press, the citizenry etc. You have that in the back of your head if you have any amount of time on the job. Now you have individuals poking around and distracting you from your main objective, the safety of everyone around. If you are honest, you'll agree that the copper has enough to keep him/her busy without having to argue with everyone who decides to interpret the constitution to them so that they will have a right to be in the middle of a incident scene that they are not a party to.

I know that this will not fly with the cop bashers. that's OK. It is the reality of things. I spent over twenty years on the street and had to deal with this many, many times. The natural curiosity of people is to want to see anything exciting that is nearby. I never had any problem with that. I never had a problem with people having scanners. In,fact, I can cite many times that scanner lsiteners assisted by being an extra set of eyes & ears thereby assisting in tracking a subject down. It only ever became a problem for me when individuals were unwilling or unable to understand that my job was not to stand there and debate whether they had a right or reason to be in the midst of things. If the scene dictated that those not involved were to be at a certain distance, that was it, remember, those same people who vigerously want to be in the middle of things and argue that they have every right to do so are also going to be the first to file a civilsuit when they get hurt because you DIDN'T keeptham at a safe distance.

Ther key work here is Common Sense.

Glenn, I tried to reply to your email, but it bounced saying you had
cancelled your account.

If you changed service providers, make sure to change your reply
address in your emailer.

Here is your message:

Once upon a midnight dreary, g.hansen pondered, weak and weary:

> From this reply you posted on RRS I get the impression you have the
> service manual for the R7000. Would you possibly be willing to copy
> out the pages needed to do the output mod

Hi Glenn,

Yes, we have the manual and are willing to copy the appropriate pages
for $10, including the postage.

I'd do it for free as a service, but we get maybe 10 requests a week
to provide manuals or manual extracts, and my secretary would do
nothing else if we offered it for free.

When we ask for a few bucks to cover copier, Dolores' time, and
postage that's usually the end of the request!

I'd suggest you consider buying the R7000 service manual, but they're
out of print. Only available as a photocopy from dealers, which is a
pain because they have several bedsheet drawings needing to be taped
together from several pieces of paper off the copier.

Can anyone tell me what hardware I need to interface my scanner to the trunker program on my computer. I have a PRO-2026 by the Shack and a handheld pro39 hyperscan by Realistic. Also is the new Base Trunktracker going to be able to interface with this program? I have everything downloaded I just need to know how to get hooked up and started. Thanks a whole bunch to anyone who helps me.

Try this. Call your local public library and ask for the reference librarian. He or she will be able to tell you the name, address and e-mail address of your representative. Keep away from samples and standard form letters; just explain your position in clear, unemotional language; your congress person will get the idea.

Looking to buy a handheld scanner of the Realistic brand for my son who is 13 and is now getting interested in the hobby. Here are a sampling of the models that I would be interested in him owning as a starter scanner unit.
Pro-28 / Model 20-508 / 30ch
Pro-50 / Model 20-307 / 20ch
Pro-24 / Model 20-503 / 16ch
Pro-49 / Model 20-306 / 10ch
I may entertain various other models providing they are programmable. Unit must be in near mint to mint condition both cosmetically & operationally. If you have a unit as described, please e-mail me with complete details. Thanks very much.

Scanner laws make the cops have easy targets. They don't have to worry
about being killed by a scanner listener! They would be in danger going
after "real" criminals but a person armed with a scanner... No problem...
What are you gonna do, hit them with it?

Like you said.. Criminals are that because they DON'T follow the laws.. One
more law for them to break is not going to stop them..

Never had a situation of this nature get to the point of an arrest
being effected. I had always had pretty good luck with (even though
time seldom properly permitted it) calmly explaining the rationale
behind requiring the on-lookers to keep at a specified safe distance.
I don't know if that is because I am very calm and laid back
individual that helped or not in these situations. I did generally
find, in everything about police work, that a fe minutes of
explanation about something would help things out in 95% of any
situations. The exceptions being the few that were intoxicated,
drugged, psychotic or the occasional individual who just wanted to
test the authority of a police officer just trying to do his job.
Those were very few, I'm thankful to say. In fact, I think I've seen
more of them (in written form) on the newsgroups such as the law
enforcement group.
One other thought on citizens with scanners. I might have entioned
that I never had a problem with that and in fact found it to benefit
my work by having all the extra eyes and ears out there. Came in handy
plenty of times when looking for wanted subjects, missing children in
a specific neighborhood. In twenty years, I can't recall a time that I
found a suspect to be inpossesion of a scanner and that that scanner
had contributed to the perpetration of his/her crime. It does happen,
but I think people should have scanners should they choose to do so.
Soapbox closed.

I've been on a cruise ship and I think others follow what I've
experienced. Try listening in the 457.525-457.600 band for simplex
and, yes, even repeaters. Inputs for the repeater were in the
467.75-467.925 band I believe. There may be some other communication
in the UHF business band 460-470 MHz as well. Don't forget VHF marine
band when getting closer to land. They also still use HF for some
ship-shore phone calls.

>L.A. County area?

Here is what I've narrowed it down to. There are other air freqs in
use due to the high number aircraft in the canyon but I haven't found
them. (apx 10 tankers, 20+ choppers, 15 heli-pads in the mountains)

1 123.9750 F Air Tac U.S. Forest Service
2 171.5750 F Base Angeles National Forest
3 123.0250 Air LAPD LAPD - AIR 025
4 127.7750 Air LAPD Media to Police
5 122.9250 Fire Air LA and County FD
6 118.9500 Fire Air Heli-port in mountains

(1) the primary air tactical freq, only audible when the air
controller's chopper is above 7000ft +/- depending on your antenna
location

(2) the primary base station

(3) and (4) has a lot of traffic, news choppers to/from the fire, but
a lot of general LA air traffic depending on your location

(5) and (6) has some traffic, but most activity seems to be below the
mountain peaks; ie not receivable in most LA areas

Jeff

FYI... You heard a RE-transmission most likely. Probably an Amateur Radio group rebroadcasting the audio of NASA Select. I'd guess you are in Florida, and what you are hearing is the AJ1R repeater system.

Both of those frequencies are in that system, as are a couple of others, and I would guess that you might also hear the transmission on the following additional frequencies if you are in range of the additional sites:

51.84 Largo
145.23 Largo
147.285 St. Pete [listed above]
442.075 Clearwater
443.625 St. Pete
443.95 unknown [listed above]

You might also try tuning a TV to 421.25 (*cable* channel 57, but hooked up to an antenna) for an Audio/Video retransmission out of Largo, or use a scanner capable of WideBand FM reception to 425.75 for the audio only signal from the Largo ATV transmission.

Although the Transit Police have been merged into the NYPD they still use
their own freq's.They are as follows:

Borough Freq PL Tone

Manhattan 160.905 103.5

Bronx 160.500 103.5
Queens 160.965 103.5
Brooklyn 160.305 103.5
Citywide 160.695 103.5

Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner

I used to live near Chicago back in the late '80s and used a pro-2004 with a grove scanner beam and pre-4 preamp. I was able to hear these air phones in the analog AM mod back then between 849-851Mhz (ground) and 894-896Mhz (air). Since I believe I lived not to far from a ground station I was able to hear 1 uplink station as well as the downlinks but on two discrete frequencies. At times when I heard the downlink only I assumed that the aircraft was probably linked to a ground station too far away for me to hear. My best reception direction was generally aimed 'south' to hear the most activity.

Today, living 150 miles away, I cannot hear any ground station. I can hear occasional rare AM calls but very few and not as strong using the same scanner beam and pre-amp but with a IC-R7100 in AM mode. I have noticed that their are many more 'digital' signals where back in the '80s they were all analog AM. I do not know what mode these digital signals use. The various manufacturers of these phones probably use different transmission modes hence the confusion of which mode used.

I suspect that the old analog AM phones are going the way of the dinosaur in very short order. The few AM signals you hear today are probably (speculating) from older aircraft and/or craft flying a foreign flag.

>BC895XLT Trunk Tracker. Does anybody know if there is such a thing?

The scanner isn't being sold yet is it? Why not what and see what Uniden has to say about the software? The only scanner software for the Mac is WAVE (for the Opto interfaces mainly) and I don;t think that's even supported any more. Haven't heard of anyone using it in quite a while. I've tried running Virtual PC as wells as SoftPC on a Mac (8500/150 MHz) and I think it's a waste of time. Sloowwww. I concluded a while ago that the best alternative is to buy a cheapo PC 386 or 486 just for the scanner. That will give you much mroe flexibility in what software to use (which inevitably will be better than anything that you will ever find available for the waning days of the Mac--and no, don't flame me Mac users--I'm a Mac bigot from way back but the handwriting is on the wall).

Hello.

Over the past several months I have received several e-mail requesting a listing of some of the more popular public service frequencies throughout Minnesota. As a result, I have devoted a section of my web page to these frequencies.

http://home.att.net/~emw-1/ Click on Minnesota Monitoring Link

Please drop by and take a look. Feel free to e-mail me with any other pieces of information that you would like to see listed on the page. My listing is nowhere complete, therefore I more than welcome anything you have to offer! If you have a scanning web site that you would like me to list, drop me an e-mail with your address as well.

http://home.att.net/~emw-1/ Click on Minnesota Monitoring Link

Thanks very much!

I have an old 16 channel one, that I rarely ever use, except maybe for the
4th of July to monitor all the activity in NYC. I think it may be a bit on
the old side to modify for cell, though

I have a BC8500XLT and yesterday after it was on for a while , I noticed the orange backlight was off. Since then after I turned it on again the light would come on for only a couple of seconds then fade to off. Anyone have this trouble before and care to share the fix. Sounds like it may be a cap somewhere. Tnx ahead of time for your help. Scott

>fool of yourself once more?

That's funny...I just read a new post by ericoyen@aol.com which was posted less than an hour ago. Looks like the AOL folks are having a good laugh at your expense, OYE BOY!

Don't you get it yet, Eric? You're just a pathetic little nobody who has brought on your own problems by your endless bouts of whining and whimpering on here. You have become a target of public ridicule due to your own nosensical statements which you have written in this forum. If you would simply IGNORE your detractors, they would go away and you would no longer have a problem. But you insist on reacting to them: making baseless legal threats, whining to AOL TOS, and complaining about how you're treated locally in Phoenix on CB and 2-meters (like we really care!) Just like a child on the playground who stomps his feet and yells "I'm mad, I'm REALLY mad" at his tormentors, causing them to engage him all the more. To borrow a famous Phoenix radio term, they've got you "all wound up", Eric. I'd guess that in the days to come, we'll see more and more "ericoyen@XXXXX.com" and "n7zzt@XXXXX.com" participants in this newsgroup. You brought it all on yourself, Eric. Nobody is to blame

besides you. From what I am told, you have ailenated people locally on the radio in the same manner over the years, and suffer from the same problems there as you do on the Internet. Gee, do you think there might be a pattern here?

Get a clue, Eric. And a life. Please! You are your own worst enemy in this world.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Yes, I the AR2700 (S/N #51143) I reviewed in October 1995
Monitoring Times magazine had this problem big time:

Missed Signals We Wanted

"...Scanning with the AR2700 was a frustrating
experience. The squelch had to be set tighter on several
VHF-high band frequencies to avoid having the scan
interrupted by the broad band birdies. The tighter setting,
in combination with the stingy squelch action described
later, forced the AR2700 to miss signals during a scan
unless they were fairly strong.
Even after locking out the birdie frequencies and
carefully readjusting the squelch to its most sensitive
position, our AR2700 still skipped weaker signals.
... The bottom line? Although our AR2700 was
sensitive to weaker signals under lab conditions with
squelch open, it skipped them during ordinary use -- while
scanning, searching, or sitting on a channel with the
squelch closed. This is a consequence of using a carrier
operated squelch instead of a noise operated squelch as
mentioned earlier...."

In article <5t5thv$dn1$1@gollum.kingston.net>,
Douglas E. Mitton <dmitton@x.mulberry.com> wrote about
his AOR AR2700 portable:

Try the repeater input frequencies in the 455-456 MHz range. A TV station here does live video traffic reports in the morning, but the audio is fed at 455 MHz. You may be able to find some chatter between the pilots on the aircraft band. Now that I've got an handheld, I have the traffic frequencies going whenever I'm driving during rush hour. I get a report every couple of minutes instead of every 15 minutes or "on the nines" or whatever.

I posted a few Realistic models that I would be interested in
yesterday. I may have been too selective. I would consider anything
(prefer Realistic) that is programmable and has less than 60 channels.

800mhz is not needed. Near mint to mint condition is desired.
My youngest boy is getting fired up in the hobby and I want to have
him start on something pretty basic. I think he will be less inclined
to loose interest in this exciting hobby.
I am not set in stone on the Realistic brand for him and willconsider
others.

Please reply e-mail with your offer.

<SNIP>

Because I was on Santa Fe's waiting list for 8 weeks with no
TrunkTracker shipped yet. I ordered from CEI the Tuesday after the
UPS strike began and the radio was delivered the following Friday via
Priority Mail.

There really wasn"t a huge difference in prices when you consider the
shipping charges and the selling price together.

4469. ???: AR2700 "SCAN" Sensitivity Question?

Newsgroup: rec.radio.scanner
Date: 1997-08-17 00:00:00 UTC
From: dmitton@x.mulberry.com
Message-ID: <5t5thv$dn1$1@gollum.kingston.net>
Source record: 188471

I'm wondering if anyone has experienced this problem and has discovered a solution to it, by adjusting settings and the like.

While scanning with a friend, his dual band HAM rig was picking up signals my AR2700 wasn't ... but if I manually entered the target frequency I could pick it up as well, JUST not while scanning. While scanning I would see the BUSY bar display flash for a second BUT the AR2700 did not stop on it.

I've just started playing with the documented "Squelch Detect" and "PLL Detect" times trying to find a work around or remedy ... any one have a solid resolution to this?

Thanks in advance for any input!

(I've posted this to the AR2700 mailing list BUT due to its low level of activity lately I decided to try posting here as well!)

Don't waste your time going to this page; it no longer exists. And when the page did exist, it had very little to do with Eric "The Dork" Oyen a/k/a N7ZZT, the only amateur operator in Phoenix who still talks to Frank Burns on the simplex frequency.

4485. Chgo Lakefront Airshow Guide

Newsgroup: rec.radio.scanner
Date: 1997-08-17 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19970817161101.MAA19102@ladder02.news.aol.com>
Source record: 188487

The City of Chicago Lakefront Air and Water show will be held next weekend, Augsut 23rd & August 24th, 1997. The watershow is from 9AM to 10:30 AM, the airshow runs 11:00 AM to 4PM???. Actually, there is a show for the park district, city housing, etc on the preceding Friday, and their is usually a mini - media show either Wednesday or Thursday at Meigs Field. Thunderbirds will probably arrive at OHare on Tuesday or Wednesday. (They are notorious for improvised overflight of sporting events / neighborhood festivals / nude rooftop sunbathers / etc during the week).

Show center is the beach at North Ave, at the north end of the near north / downtown area. Enter via the Lake Shore Drive Pedestrian bridge from the south end of lincoln park or the Lakeshore Drive North Avenue underpass - pay attention to the nice policeman so you don't get run over).

This event usually draws well in excess of one million attendees, so if you don't like crowds, airplanes, boats, sand, sky and surf, don't go. If you are going plan on arriving early. Please don't think you can drive down to the show 20 minutes before it starts and then park and go. This part of the city is tight for parking even during normal days. You can take a cab, a bus, the El, the subway, your bike or walk. It may be easier to enter the area just north of the site at the Fullerton Ave underpass to Lake Shore Drive. (Leaves you about a one mile walk south down the lakefront to show center - great sightseeing / girl and guy watching enroute, or, a nice place to watch from right there at Fullerton - north end of the show line.) If you must drive, park & walk plan on arriving well before 8AM and good luck. Other good spots are any boat / LSD rooftops / Parks to the North / Lincoln Park. About one in every 200 Americans is at the show - plan ahead.

This is a FREE show, but there is no formal seating, plan on a beach and / or picnic setup. (Lawnchairs, blankets, etc). There are public restrooms and food vendors, but you may choose to bring your own. Sand can be a problem for electronic gear. If you find parking it will be expensive. If you park illegally you will be towed... by the city... not so good.

The weather in Chicago is highly variable. If it's hot and sunny the beach at show center can get very very hot & sunny. There are very few shady spots at show center, there are a few more at the north end end of the show line at Fullerton. This point on the lakefront often suffers from a low-hanging haze during this time of year - this has cancelled the show in the past, be warned.

If you like airshows and great scanning, this is it. The show site suffers from a lot of intermod / overload radio interference. Radios with triple conversion circuitry and / or attenuators tend to work best. Make sure to bring extra batteries due to the length of the show. Good listening includes:

-Show control, platform and show arrival / departure control ops, as well as air to air
-Show operations and vendors (many rental radios w/unpredictable and / or non-standard freqs)
-US Coast Guard and Marine Frequencies
-The Chicago Police Dept as it handles the event
-The Chicago Transit Authority
-The Chicago Park District
-Everything else in the Windy City

Featured Acts and suggested freqs are listed below. BE WARNED THAT THESE FREQS REPRESENT PAST USE AND ARE NOT GUARANTEED TO BE IN USE AT THE SHOW. (No psycho-Boy freakouts at the show site because we didnt give you the correct frequencies please - go search the same way we do - thanks).

A fairly complete frequency guide can be found on our web site:

http://www.theramp.net/shabec/carma.htm

For info on the show and the city in general try the City of Chicago Web Page:

http://www.ci.chi.il.us/

Suggested Freqs & Acts:

-Show control Platform: 123.100 / 319.850 / 397.850 / 122.725
-Show arrival / departure control: 134.400 / 308.400 / 126.800 / 388.000
-Meigs Tower: 121.300 / 257.800
-USCG: 156.800 / 157.050 / 157.075 / 157.100 / 157.150 / 157.175 / 282.800 / 381.800
-Chgo Park Dist: 45.92 / 151.190 / 151.295 / 159.405 / 159.360
-CPD Marine Units: 156.550 / 154.830 / 460.325 / 856.9375 / 857.9375 / 858.9375 / 859.9375 / 860.9375 / 865.8875 / 865.9125 (800 Mhz Trunked system - Marine uses for boat to boat / inputs 45 Mhz)
-CPD: 460.125 / 460.150 / 460.175 / 460.275 / 460.325 / 460.300 / 460.525 / 460.350 / 460.250
-BROCHURE / 640 A/B MOA Over Lake Michigan: 396.900 / 298.775 / 283.775 / 319.850 / 377.050 / 348.650 / 322.450 / 355.550 / 370.950 / 305.500 / 291.900 / 320.900
(Note: Military Acts will hold and / or refuel / and / or dogfight in the MOA before during and after the show. Additionally, these freqs sometimes used for air traffic control / vectoring / air to air at the show site)
-OHare Tower: 120.750 / 127.925 / 132.700 / 390.900 / 126.900

-USAF Thunderbirds: 141.850 / 143.850 / 236.550 / 263.550 / 250.850 (only a sample)
-Red Baron Team: 122.725
-Dave Dacy
-Tony Kasian Wing Walkers
-Sierra Aces: 122.975
-Lima-Lima Flight Team: 123.150 / 123.175
-Corona Extreme Water Show (151.625???)
-USAF C-141 Transport Demo
-AH-64 Apache Helicopters Team Demo (Low Band???? Freq Hoppers???)

-C-130 Hercules Flight Demo
-F-15E Flight Demo (Probably out of Saint Louis)
-B-1 Lancer Bomber Flight Demo (Ellsworth AFB???)
-AV-8B Harrier Flight Demo
-F-14 Tomcat Flight Demo
-F-16 Flight Demo (probably out of Springfield IL - search 138.000 - 144.000, AM Mode 25 Khz steps for air to air tac - command post is 272.175 - also check air refuelling frequencies since that's why they are here - for the refuelling demo with the KC-135 out of OHare)
-KC-135 Tanker Refuelling Demo (Tanker usually out of OHare: 126.200 / 143.800 / 384.900 / 372.200 and / or BROCHURE / 640 MOA / Refuelling Freqs)
-F-117 Stealth Fighter Flight Demo (usually works on UHF Platform Freq)
-USN Leapfrogs Parachute Demo Team (VHF Motorola Sabers / Visars / also reported VHF frequency hopping radios and 140 Mhz Navy Freqs / try 242.200 - no guarantees)
-USN SEALS Beach Assault Demo (Cool & Loud - be afraid, be very afraid...) (The SEALS in past years have: Kidnapped unsuspecting Park District Administrators / Rescued same / dragged same through sand for 100 yards during helicopter extraction / arrived un-announced / had their escort gunship spray REAL mini-gun fire into the water / set off large C-4 charges / set off bigger C-4 charges that sprayed the crowd with sand / set off anti-mine hose charges down the beach / etc HAVE YOUR CAMERA READY)
-B2 Stealth Bomber Flight Demo SATURDAY ONLY (Talked w/platform on UHF last year)

Our local group of scanner buffs usually camps out under the trees at the Fullerton Ave point. You are welcome to join us. Try us on 145.770 Simplex (151.4 Hz PL Tone - use tone transmit / receive to avoid intermod problems) if you have an amateur radio license. Please be advised that this one of our local "best times" of the year, so if you are stressed out / manic / a conspiracy nut / generally unhappy or otherwise totally obssessed please don't join us. We wiil posting confirmed freqs here and on our website as things develop, but no guarantees to due to posting delays, etc. Ted and Kim Moran - Chicago Area Radio Monitoring Association / CARMA Happy Scanning.

PS - Please post additional and confirmed freqs / requests / accolades / etc as a response to this post THANKS!

>Thanks for your help.

While the NYC Transit Police don't officially exist anymore by virtue of a 1995 merger, they have been renamed as the NYPD Transit Bureau and still maintain their old frequencies:

Manhattan 160.905 District 1,2,4
Bronx 160.500 District 3,11,12
Queens 160.965 District 20,23,33
Brooklyn 160.305 District 30,32,34

all repeater, very active

I need to find the area online in the newsgroups where i can get a copy of Motorola Radio Programming Software. I remember seeing it here in the Newgroups somewhere, but i have lost the info. Any info is thanked for in advance. For one & all's protection, you can remain anonymous as to your identity. For further protection, you can post it in the newsgroup area under the name Motorola Radio Software.

Haven't tried Radio Manager software.

I tested a PRO-64 for Monitoring Times magazine and made
several measurements. For a full PRO-64 review, see the
current issue (Aug 1997).

Meanwhile, here's a summary:

PRO-64: 1997 vintage. Good portable 400 channel scanner
using up conversion. Replaces PRO-62 and has many more
features. Selectable AM/NFM modes but fixed step sizes. 10
search banks which can be cascaded. Auto store saves unique
frequencies found during a search. Frequencies can be
loaded using a computer but optional interface kit not yet
available. Can recharge Radio Shack's optional, monolithic
NiCd pack, but not AA cells within the scanner. IFs are
257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64,"
by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

go to www.congress.org and you can find your representatives by your zip code, then write them a letter explaining why you think this is totally unacceptable to have the frequencies blocked from future radio's. Send them a letter by mail not a e-mail or maybe call their office and tell them what you think.

Hello All,

Well I have finished the August Issue of the APCO journal and on
page 129 is a full page advertisement for Communications Electronics

and at the Top of the AD in BIG BOLD letters is the statement

"Bearcat Intercepts Trunked Radio"

Boy what a way to scare the Public Safety Community

I can hear it now "there goes those naughty scanner listeners doing a
bad thing and listening to things they Shouldnt"

I Hear alot of People Complaining about this new bill
but I have a suggestion that may be of some interest.

I am of the Opinon that most of the problem lies in misinformation
most public safety officials have no clue as to who makes up the
scanning community, they think that all we do is get in the way and
cause trouble and this for the most part is far from the truth.

if you have a club try inviting those officials to the meetings and let
them see what we really are about.

just a thought

1) anyone know wher I can get some high capacity NiCd batteries for some
scanner radios. I have 4 scanners, 3 hand helds and one desk or base model.
so far, I have only been zable to find 600mah. I'd like 700 or 750mah if
I fould get them.

2) I noticed that sometimes, the batteries will get hot..because they are
discharging too fast, I guess...any idea on what might cause this. I did not
find any obvious signs of any shorts in the radio nd it worked fine on a different set of
batteries

>-Phil

Gentlepersons,

let's not revise the facts:

Clinton, not his Attorney General, not Hillary, not Web Hubbel was directing the executive branch when US citizens were deliberately burned alive by the US government.

Ruby Ridge: target practice by the US government with a woman and a boy as targets, now dead. Killed by our government. The shooters are unpunished. Clinton could have exercised discipline. Clinton seems to see naught wrong with shooting people.

There was a time when I had faith in the FBI, CIA (yes, really) and others who chose careers in law. What in the hell happened to the "good guys" at Waco and Ruby Ridge and at Fred Hamptons apartment. What happened to the military oaths taken by those who delivered the armor at Waco?

Seems to me a man has been convicted of mass murder by a kangaroo court - he may be guilty, it was never proven, one way or the other - and sentenced to die, while an a man who is responsibile for burning humans to death, deliberately, is free.

Ben Franklin, John Adams, George Washington, Jimmy Carter, Harry Truman, Eisenhauer, T. Roosevelt, Nathan Hale, Otis, Bowie, Audie Murphy, Bob Kerry, John Kerry, Ralph Nader, Barry Goldwater, John McCann (sp?), and so many others have risked everything. Yet, somehow, we are left we an individual whose name should not be mentioned in the same breath with these good people.

Let's not revise history. We must learn from history.

For Truth and Fair Winds
Bill Howell (DIVER!)

> Steve S.

Steve,

Part 90 (Land mobile Radio Services) section 90.212 Provisions relating to the use of scrambling devices and digital voice modulation. This section of part 90 defines the use of scrambling devices.

The citation reads:

[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to End]
[Revised as of October 1, 1996]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR90.212]

[Page 459]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION (CONTINUED)

PART 90--PRIVATE LAND MOBILE RADIO SERVICES--Table of Contents

Subpart I--General Technical Standards

Sec. 90.212 Provisions relating to the use of scrambling devices and digital voice modulation.

(a) Analog scrambling techniques may be employed at any station authorized the use of A3E, F3E, or G3E emission, subject to the provision of paragraph (d) of this section.
(b) The use of digital scrambling techniques or digital voice modulation requires the specific authorization of F1E or G1E emission, and these emissions will only be authorized subject to the provisions of paragraph (d) of this section.
(c) The transmission of any non-voice information or data under the authorization of F1E or G1E emission is prohibited. However, stations authorized the use of F1E or G1E emission may also be authorized F1D, F2D, G1D or G2D emission for non-voice communication purposes, pursuant to paragraph (k) of Sec. 90.207.
(d) Station identification shall be transmitted in the unscrambled

analog mode (clear voice) or Morse code in accordance with the provisions of Sec. 90.425. All digital encoding and digital modulation shall be disabled during station identification.

[43 FR 54791, Nov. 22, 1978, as amended at 47 FR 15340, Apr. 9, 1982; 49 FR 48711, Dec. 14, 1984]

{End citation}

As you can see in 90.212(a) you do not need special permission for analog scrambling. However, in 90.211(b) if you wish to use digital scrambling your license must reflect that fact.

Part 95 Personal Radio Services has no mention of scrambling.

Hope this helps.

Ed

right...as if they really care? when was the last
time the news nets took some municipality
to court over "free press" issues...

why?

The FCC will clean their clock when renewal comes
by...after all, the FCC is controlled by that old
smelly FART-nick named HELMS....

FCC is what keeps the American Press Silent.

And Disneyland too. Don't want Mickey and Minney
appearing on tv extolling the virtues of a free
and unfettered press. Might be "too real"....

The clinton admin cannot deal with "reality" too
well. they just invent it. and the misses goes
and buys a new hat.

Paul..with a million bucks in your hands i am
sure someone can help you.

Paul..go to the http://www.altavista.digital.com

search for : trunktracker
trunked radios
trunked scanners

enjoy

you will have to pay the piper to play his tune....

there are no shortcuts in scanning..it's a business
where every two or three years reinvents itself and
the models prior to are almost useless.

by the time you read this a new scanner may be
born. Or ten others die.

4533. Monitoring LAPD, NYPD, etc, OVER THE NET

Newsgroup: rec.radio.scanner
Date: 1997-08-18 00:00:00 UTC
From: Pierre <psdon@ica.net>
Message-ID: <01bcab83$6e738060$46d9f5cf@psdon>
Source record: 188365

Can anybody advise what is needed to monitor these law enforcement frequencies which are available for this express purpose along with fire "LIVE" at PoliceScanner.com? It indicates "listen AudioNet" with which I am not familiar. I did, however, download RealPlayer so I could listen, and so far, I am having no success. I have an operational soundcard, and a USR 56K modem. But I still don't seem to have any success. Does anybody have any idea why? My bud seems to have no problem monitoring these live frequencies. It seems like an awesome WebSite, and it is ever evolving. Feel free to E-mail me psdon@ica.net. Thank You very much in advance.

4534. Police Frequencies Greater TORONTO, ONTARIO AREA.

Newsgroup: rec.radio.scanner
Date: 1997-08-18 00:00:00 UTC
From: Pierre <psdon@ica.net>

Source record: 188366

Can anybody e-mail me the best, most ACTIVE, CONFIRMED police frequencies for Metro TORONTO, DURHAM REGIONAL, YORK REGIONAL, PEEL REGIONAL Police Forces? There is a plethora of lists, but I find a lot of these frequencies in these lists are outdated, inactive, or in the case of some--like YORK REGIONAL POLICE--SILENT. Where has all the activity gone in this exceptionally BUSY, Major urban centre???? Is Scanning in Greater Toronto area DEAD because of scrambling, MDTs, etc??? Any help/clarification would be Greatly appreciated. Thank You in advance. psdon@ica.net.

Gentlepersons,

let's not revise the facts:

Clinton, not his Attorney General, not Hillary, not Web Hubbel was directing the executive branch when US citizens were deliberately burned alive by the US government.

Ruby Ridge: target practice by the US government with a woman and a boy as targets, now dead. Killed by our government. The shooters are unpunished. Clinton could have exercised discipline. Clinton seems to see naught wrong with shooting people.

There was a time when I had faith in the FBI, CIA (yes, really) and others who chose careers in law. What in the hell happened to the "good guys" at Waco and Ruby Ridge and at Fred Hamptons apartment. What happened to the military oaths taken by those who delivered the armor at Waco?

Seems to me a man has been convicted of mass murder by a kangaroo court - he may be guilty, it was never proven, one way or the other - and sentenced to die, while an a man who is responsibile for burning humans to death, deliberately, is free.

Ben Franklin, John Adams, George Washington, Jimmy Carter, Harry Truman, Eisenhauer, T. Roosevelt, Nathan Hale, Otis, Bowie, Audie Murphy, Bob Kerry, John Kerry, Ralph Nader, Barry Goldwater, John McCann (sp?), and so many others have risked everything. Yet, somehow, we are left we an individual whose name should not be mentioned in the same breath with these good people.

Let's not revise history. We must learn from history.

For Truth and Fair Winds
Bill Howell (DIVER!)

>Steve S.

On business band, you can scramble or encrypt, but all parties to the
conversation must first identify in the clear before going to an
encypted or scrambled mode, then again in the clear when the encrypted
or scrambled is finished.

It is all laid out in the FCC rules regulations, which all licencees
are supposed to have a copy of.

I get a publication every week called the Washington Radio Report.

In this weeks edition a new license application was listed for.

Regional Fire Protection Agency
Division Chief John R Becker
14343 Civic Drive
Victorville, CA 92392
619-955 5240

Frequencies are:

811.475 856.475
811.950 856.950
812.475 857.475
813.225 858.225
814.225 859.225
815.225 860.225
815.950 860.950

640 mobiles
64 control stations
2 sites
34-36-38N 117-17-17W
34-58-14N 117-02-23W

Coordinates are NAD27.

Can anyone in the area advise me when this system comes on the air. I think it will be part of the new San Bernardino County system and will be a Motorola system.

Thanks

I have a Radio Shack Discone (#20-013) that I have had for quite a while and want to install prior to the winter season to increase my scanning range. I have a couple questions that I need to resolve prior to the installation. Perhaps someone with expertise in this area will be able to assist.
1. The best type of cable to run from the antenna to the inside of the house.
2. I've heard somewhere that if there is one area that this type of antenna is less than adequate,it would be in the 46mhz area. Is this true and if so,is there a manner that one can retrofit the antenna to rectify that problem? (and if not, what would be a better antenna to go with for the best overall coverage in the range 30-900mhz?
Thanks for any assistance..
Regards,
Ray Miller N2NJK radioman@localnet.com

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Using this brochure to shop and compare will enable you to buy,
sell, trade,
and receive repair information & rates, etc. more effectively than
most
other sources.
This brochure is LOADED with names, addresses, phone/ fax numbers

of different shops, shacks, and even, shops on wheels , ready to
serve
your most common, or not so common needs.
NO tricks, NO gimmics, just straight forward information.
This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling , popular
brochure..........

Send $2.00 , and of course, your snail mail address
to.......
(please include your e-mail address)

>circuit in the radio?
>I may be ahead of myself here, I guess that a service manual would
>tell this for the Pro-43......anyhow I'dlike to hear more about this
>if I could.
>Thanks a lot!
>Regards
>Ray Miller N2NJK radioman@localnet.com

Well, it's by sheer guess actually. The service manual does not tell you exactly the requirements of the light. I think mine lists the bulb as a 6.3 volt bulb. (not sure) BUT, how much current? It doesn't say. You could figure that out by the spec sheet on the transistor that turns the light on I suppose. BUT, the lights you yank from an old cell phone arent' going to have the ratings on them and good luck getting any tech info on a cell phone. (It's like getting the Democrats to agree they are socialist pigs) Anyway, I used some wires coming off the board and connected the lights from the cell phone a couple of different ways using some aligator clips. I did this until I got the brightest light from the 4 lights I had. I think they were LED's of some sort in a weird mold. I ended up using 4 of them and had two of them connected in series from the hot lead of the light pc board trace to ground. I connected the other two in the exact same manner. I think the real trick is to do this without knocking the LCD off the logic board. It's not on there very good. I put a VERY little amount of hot melt glue on the glass piece that fits behind the LCD to keep it in place. So, at least that wasn't falling from the unit every 10 seconds.

I'm going to give it another 200 channels and an output from the descriminator if I ever get around to it. If I can get my hands on some hardware, I'm going to put a descrambler chip in it so I can listen to scrambled conversations on the scanner without connecting to an external device. (scrambled towing companies of course, not phones)

Is the PRO-2021 a base unit? If it is, you could put a NICE light in that one. You don't even have to get whole cell phones, just buy the handsets

since that's where the lights are. Most of them are VERY small.

Ok, I'm rambling...

This is the best review of freqs and viewing info for the show that I've seen. I prefer to focus my attention on the show platform freqs and the show performers (Thunderbirds, Lima Lima, Golden Knigts etc.) and forget about the Coast Guard, Chicago Police, Park District etc. I've found that those just distract from the performances, unless you want to listen in between acts. First-time monitors might want to try less and enjoy it more.

>Anyone have general info on this subject?

I saw this on the WWW may be of interest to you:

The G-Wiz Circuit Board

What is the G-Wiz board?

The G-Wiz is a tiny (1"x2"x 1/5") circuit board that allows
you to monitor an Ericsson/GE Trunked Radio System by
recognizing the jamming at the end of the transmission and
allows you scanner to bypass it. You will hear only the voice
transmissions when you are scanning an Ericsson/GE TRS. When
scanning a conventional system, the reception is
normal.

What Scanners Can Use the G-Wiz Board?

Bearcat Models BC150, BC200, BC205, BC220, BC760, BC800,
BC855, BC860, BC8500, and the BC9000

Radio Shack (Realistic) Models: PRO25, PRO34, PRO37, PRO39,
PRO43, PRO46, PRO51, PRO60, PRO62,
PRO2004, PRO2005, PRO2006, PRO2022, PRO2026, PRO2027,
PRO2030, PRO2032, PRO2035, PRO2036,
PRO2037, PRO2039, PRO2040, and the TS-2.

Is it Legal?

Yes. It has nothing to do with descrambling encrypted
communications or cellular phone calls, both of which are
prohibited. G-Wiz allows you to bypass transmissions you
don't want to hear. There is no law prohibiting you from
scanning past any radio signal you don't want to listen to.

How is it installed?

The G-Wiz mounts INSIDE the scanner with no drilling or
cutting. No disassembly is needed, except for opening the
cover.

Can it be installed by the user?

Installation is straightforward, but it must be done right. Precision soldering is needed, as well as adjustment of several controls for proper operation. Installation is provided free, so is is usually best to take advantage of it.

Could it affect my scanner's warrenty?

Yes, it could. Service can be delayed or denied at the discretion of the warrenty station. But since G-Wiz doesn't alter any parts, it shouldn't void the warrenty. If service is needed, it can be easily removed.

How can installation be arranged?

Currently, the turnaround time for the G-Wiz is about three weeks. Please contact Jeff via e-mail or by calling The Ham Station at 1-800-729-4373 for current price, ordering information, and shipping instructions.

4572. Long Distance Scanning

Newsgroup: rec.radio.scanner
Date: 1997-08-18 00:00:00 UTC
From: Pierre <psdon@ica.net>
Message-ID: <01bcab7e$55828f60$46d9f5cf@psdon>
Source record: 188415

I have been a scanner hobbyist for over 20 years, especially interested in law enforcement frequencies in both the United States where I have many relatives and in the Greater Toronto area of CANADA. I AM NEW, however, at using newsgroups; so please bear with me. My question is: I quite enjoy scanning the BUFFALO, NEW YORK, & NIAGARA FALLS, NEW YORK, area and do on all my frequent visits there. I live about 90 miles from Niagara Falls N.Y., and about 110 miles from BUFFALO, N.Y. Question: Is there ANY way at all that I can SOMEHOW monitor law enforcement frequencies in these areas notwithstanding the distance? If so, what equipment would I need and how much would it cost? Where could I get the necessary equipment? What is the most powerful antenna available, and the most powerful, compact antenna for this purpose? Finally, this may sound farfetched, but is there any means of monitoring the MDTs commonly used by North American Law Enforcement? In the Toronto area, there APPEARS NOT to be any frequencies used in police undercover operations that are TRULY active and monitorable. If I am incorrect, please somebody correct me. York Regional Police frequencies and many other major urban police forces' frequencies seem to be increasingly silent, and this is NOT due to a lack of action or activity. On the contrary, there is more action than ever these days. Why so much silence? Is this situation happening in the USA similarly? It doesn't SEEM to be in the
State of NEW YORK or in FLORIDA, in my experience. Can anybody provide me with answers to ANY of the questions I have asked? I am a most interested scanner enthusiast and always have been, but it seems to be getting more difficult.
Please feel free to respond to psdon@ica.net. Thank You All.
Cheers!

Hmmmmmm......you downloaded and installed realaudio player? Realaudio
is configured for your browser right? I think it only works with
Netscape or MSIE. Once realaudio is installed, it should automatically
launch when needed, ie clicking on a scanner sight. All browser
plug-ins should automatically launch when needed if they're configured
and installed properly in your web browser.

Good luck........

> Paul

You CANNOT modify a regular scanner to trunk track. At present the ONLY cheap/commercial unit is the Uniden BC235XLT. And it works with certain trunked (the most widely used) systems. You can get more info on it (specs too) if you go to http://www.trunktracker.com

As far as entering in the talk id's in the 235, it's easy. You must enter trunk mode then enter the frequencies for the trunk system. To begin trunk scan/search, the unit will lock up on the data channel and you're ready to enter talk id group id's or begin a search for them. Once all the id's that you want to scan are entered, it simply works like a regular scanner. Works well too....

Good luck......

Can a Radio Shack scanner be modified to receive a
trunked police department signal. Or do I have to
buy a new scanner with it built in already. How are
the different trunking codes entered in?

Anyone have general info on this subject?

I saw this on the WWW may be of interest to you:

The G-Wiz Circuit Board

What is the G-Wiz board?

The G-Wiz is a tiny (1"x2"x 1/5") circuit board that allows
you to monitor an Ericsson/GE Trunked Radio System by
recognizing the jamming at the end of the transmission and
allows you scanner to bypass it. You will hear only the voice
transmissions when you are scanning an Ericsson/GE TRS. When
scanning a conventional system, the reception is
normal.

What Scanners Can Use the G-Wiz Board?

Bearcat Models BC150, BC200, BC205, BC220, BC760, BC800,
BC855, BC860, BC8500, and the BC9000

Radio Shack (Realistic) Models: PRO25, PRO34, PRO37, PRO39,
PRO43, PRO46, PRO51, PRO60, PRO62,
PRO2004, PRO2005, PRO2006, PRO2022, PRO2026, PRO2027,
PRO2030, PRO2032, PRO2035, PRO2036,
PRO2037, PRO2039, PRO2040, and the TS-2.

Is it Legal?

Yes. It has nothing to do with descrambling encrypted
communications or cellular phone calls, both of which are
prohibited. G-Wiz allows you to bypass transmissions you
don't want to hear. There is no law prohibiting you from
scanning past any radio signal you don't want to listen to.

How is it installed?

The G-Wiz mounts INSIDE the scanner with no drilling or
cutting. No disassembly is needed, except for opening the

cover.

Can it be installed by the user?

Installation is straightforward, but it must be done right.
Precision soldering is needed, as well as adjustment of several
controls for proper operation. Installation is provided
free, so is is usually best to take advantage of it.

Could it affect my scanner's warrenty?

Yes, it could. Service can be delayed or denied at the
discretion of the warrenty station. But since G-Wiz doesn't alter
any parts, it shouldn't void the warrenty. If service is
needed, it can be easily removed.

How can installation be arranged?

Currently, the turnaround time for the G-Wiz is about three
weeks. Please contact Jeff via e-mail or by calling The
Ham Station at 1-800-729-4373 for current price, ordering
information, and shipping instructions.

Thaks for the Galena area frequencies. By the way do you also have the fequency for the Galena Territory police department?

Thanks in advance

Most of the city and the county, including IUPUI, are 800Mhz "trunked"
and are part of what is called "MECA" I have those freqs if you are
interested. Without a tracking receiver though it is difficult to listen
in. WITH one it is a cinch and I have a list of all the talk groups.

Last night I ordered a UBC9000XLT, They said it might take about ten
days. Not sure because of UPS strike and all carriers are busy. I'll
post when I receive it.

you can make you own mounts
with a minimum of materials

just takes two of this
and two of that
and one of this....

plus screws from the scanners and
the imagination soars

bill conduit
etc.

there is a fire safety company that sells them
i have a catalogue somewhere..if you want
address...let me know by e

otherwise ill let it stay at the bottom of the
box ...

4599. Radio Shack PRO-90 TrunkTracker is in!

Newsgroup: rec.radio.scanner
Date: 1997-08-18 00:00:00 UTC
From: Steve S <kf4nnq@hotmail.spam-off.com>
Message-ID: <33F8D799.3334@hotmail.spam-off.com>
Source record: 188442

The new RS catalog has the PRO-90 listed at $299.99 with matching case
available for $19.99 more. It's probably the Uniden in Tandy clothing.
Listed freqs are: 29-54, 108-174, 406-512, 806-824, 849-869, 894-960MHz.
Included is a trunked freq list for major cities.

So much for hamfest hawks pushing the BC-235XLT for over $300!

Other RS handheld scanners now listed as follows: PRO-64, $299.99;
PRO-67, $279.99; PRO-29, $199.99; PRO-70, $149.99; PRO-28, $139.99

4600. Where is voice scrambling allowed for individuals?

Newsgroup: rec.radio.scanner
Date: 1997-08-18 00:00:00 UTC
From: Steve S <kf4nnq@hotmail.spam-off.com>
Message-ID: <33F8D825.11AF@hotmail.spam-off.com>
Source record: 188443

Any words on which radio service allows voice inversion scrambling for individuals? I'm only aware of police and federal (if they're not using DES) that can scramble. Can businesses or GMRS?

Duffy, you are so right. I dont know what we are going to do. Do
you feel that each day brings more of a threat to our freedoms from our
own governments in the USA? I believe that many of us do feel that
way. We were just given a tax cut that is nothing more than a joke to
make us shut up about a real tax cut. I am very conservative, and I
find that the Republican party supports most of the values I believe in,
but they too have been letting me down lately. The democratic party is
filled with leftists who do not in any way support the values America
was founded on. Those values state that we believe in very limited
government and lots of freedom. That the people are in control of the
government that is highly limited by the Constitution.
However, today, we see the federal and state governments doing things
that are not defined in law anywhere! The federal government is taxing
us to death and using the money in ways our forefathers would not
believe.
Freedom is slipping through our fingers and you and I know it.
In a few years, we will no longer be free in the USA unless we alter
the course of government and roll back taxes, rules and regulations.

Karl Marx said that all democracies will end in socialism. I do not
believe that, though many in our local, state, and federal governments
seem Hell bent upon making it happen.

We have only three roads to go down.

1. We change our course with votes and new, political candidates who
are truely patriotic and sypathetic to the desires of our founding
fathers to greatly limit the power of government.

2. We change our course with the blood of our politicians.

3. We stay the course and loose our country to socialism, and very
heavy handed government.

Those are our three options. I choose number 1. However, if number
one fails to succeed after a serious try, which I believe we did in 1992
when we booted the democrats out of Congress, many in our country may

become so frustrated that we will see number two acted upon.
I do not want to see blood shed. But, those in government must
realize that the people are on to the elected officials who have
silently planned to change America into something most of us would never
desire, and the people are very aware of those who have no plans, except
to enjoy the power of the office and leave with a retirement program
unlike any in the real world. Both types of politicians are doing harm
to our nation. Eventually, they could frustrate the nation so greatly as
to provoke an outlash against government.

We the people must be free!

CUT TAXES SHARPLY ON ALL LEVELS!

CUT RULES AND REGULATIONS ON ALL LEVELS, ESPECIALLY EPA WACKO RULES!

STOP TRYING TO CONTROL THE PEOPLE AND TAKE AWAY THEIR FREEDOMS!

>Thanks

I've used Sanyo 1.4Ahr NMH AA batteries using an external charger
designed for the batteries. My source for these cells is now out of
business, but they were quite cheap. (Under $3.00 for flat top cells].
I can do a 2C charge (30 minutes) with no problem.

I been playing with some Panasonic 900mAh AA cells and have been
having trouble quick charging them. If you do buy these cells, at the
moment I can only suggest that you use the Panasonic 3hr charger.
These high capacity nicads are not tolerant of continual trickle
charging. Do not leave them in your scanner on constant trickle else
the lifetime of these cells will be shortened.

From: gt6955a@prism.gatech.edu
Message-ID: <5td71j$n5u@acmez.gatech.edu>
Source record: 188256

Hello

I have some tickets to this weekends Nascar race, and I just bought a used bearcat scanner for $40 (about the same price for one rental)

Anyway, the scanner didn't come with the manual, and I really have no idea how to use it. If anyone has a manual, or if you can give me a quick overview of how to program the frequencies, i'd appreciate it.

If you can tell me if there's a help page on the web (I already tried uniden) that be cool.

I can pay for a photocopy and shipping, or I can give you a fax number.

Thanks in advance.

You can e-mail me personally, but I don't read this group very often. (since I just got the scanner)

> government that is highly limited by the Constitution.

True. I'm a fifth generation Republican, by my mother's side from the time when my great-great grandfather came from Prussia (Germany). However, I do too feel let down by the Republicans too. Man, here in Pittsburgh and Pennsylvania in general, they are backstabbing each other like crazy. In short, I tend to be populist conservative/libertarian on most issues.

> Freedom is slipping through our fingers and you and I know it.

> 1. We change our course with votes and new, political candidates who
> are truely patriotic and sypathetic to the desires of our founding
> fathers to greatly limit the power of government.

I keep think 2000 will be it, but I said the same thing for 1992 and 1996 as well. We must work to change things this way.

> 2. We change our course with the blood of our politicians.

I really hate to see that happen but I think it will come to that if we continue the current course. My father thinks that's inevitable, been telling me since the 1970's. He seems to think that he might as well give up voting, hole up, and wait for the bullets to fly. I dunno, I hope we can accomplish change via option 1 because option 2, people will end up getting hurt or killed including the innocent. It's scary to think about.

> 3. We stay the course and loose our country to socialism, and very
> heavy handed government.

That's even scarier than option 2. However, we could be headed that way as long as people will continue to think that everything's OK as long as

they can hop into their Jeep Cherokee and rent "Barney" (ugh) tapes at their local Blockbuster. The Demopulicans seem only to give the people their "bread and circuses" to keep the people fat, happy, and dumb.

> I do not want to see blood shed. But, those in government must

> to our nation. Eventually, they could frustrate the nation so greatly as
> to provoke an outlash against government.

Well, it could go that way if we continue to lose our good jobs via GATT, NAFTA, etc. because our leaders are deaf to the concerns of the average people along with the loss of our freedoms. What does this have to do with scanners? Well, it is relevant because our Constitution protects our freedom to listen, our freedom to pursue our hobbies and our lives in peace, and of course we need to have a better economy so that people can afford to buy those scanners, radios, and ham radios.
Chuck, just some thoughts......

4620. Re: Where is voice scrambling allowed for individuals?

Newsgroup: rec.radio.scanner
Date: 1997-08-19 00:00:00 UTC
From: Steve S <kf4nnq@hotmail.spam-off.com>
Message-ID: <33FA2B38.689@hotmail.spam-off.com>
Source record: 188263

Ed,
Thank you for the straight forward reply. Some folks take these
opportunities to preach, pontificate, and pounce on any idea presented.
You answered my question clearly.

Thanks,
Steve S.

The new catalogs are hitting the stores now. Along with them come five
new scanners.
First is the PRO-90 radio shacks very own trunk tracker. It sports 300
channels,
triple conversion, 50 channels per second scan speed, and it comes with
an AC adapter.
Unfortunately this scanner(obviously a Uniden) has a nicad in the
tradition of Uniden scanners.$299.99
Next is the PRO-64. It features 400 channels, triple conversion, auto
store, and 40 monitor memories. $299.99
Then we come to the PRO-67. Basically the PRO-51 with triple conversion.
$279.99
Finally is the PRO-2041. 400 channels and triple conversion $299.99

The charger is *not* particularly expensive, unless you get the one that charges C and D cells. I paid $20 CDN for the smaller Renewal charger; I expect it would be even cheaper in the US.

And this is a fast charger, with individual charge monitoring for each cell. It starts out at about 200 mA/cell, so it puts energy back into the cells much faster than cheap constant-current nicad chargers. It doesn't charge as fast as "one hour" nicad chargers, but it's also far less expensive than them.

..... FOR SALE....:

(add postage to prices.)

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

---------- P O W E R S U P P L Y M O D U L E S ------
I have several power supply modules available. These are
complete, requiring only the DC input voltage. The modules
contain the necessary IC regulator and caps or coils as
needed. These are new, never used. The boards have the□
input and output terminals marked.

1.) 2" x 2" PCB with regulator, transformer, etc, installed.
8V to 16VDC input, +12V / 1A out.
6 units available at $8 each, plus shipping.

2.) 24pin DIP regulator-on-a-chip. No external components□
are needed! Up to 40VDC input, +5V/1A out.
3 available at $5 each, plus shipping.

.... FOR YOUR DRIVING PLEASURE ....
1929 Mercedes SSK kitcar on VW chassis. Just completed, titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

.

*
*Thanks
*
** I've used Sanyo 1.4Ahr NMH AA batteries using an external charger
** designed for the batteries. My source for these cells is now out of
** business, but they were quite cheap. (Under $3.00 for flat top **
cells].
** I can do a 2C charge (30 minutes) with no problem.
**
** I been playing with some Panasonic 900mAh AA cells and have been
** having trouble quick charging them. If you do buy these cells, at the
** moment I can only suggest that you use the Panasonic 3hr charger.
** These high capacity nicads are not tolerant of continual trickle
** charging. Do not leave them in your scanner on constant trickle else
** the lifetime of these cells will be shortened.
**
** gsellani@accesscom.com

AA NiMH can be purchased from Tower Hobbies. It's a mail order R/C
model supply company. They can be located on the WWW at
http://www.towerhobbies.com These batteries can be purchased as
individual cells or assembled packs. I've been using them in my model
airplanes with great success. I've also been using a standard NiCD
charger/cycler with great success with these cells.

Happy scanning....

Dean

I'm not sure, but I think a scanning radio is defined as having 4 or more memories and the ability to automatically switch between them. One example of a shortwave receiver with this capability is the Sony ICF-2010.
I'm sure there are more.

If someone knows the official definition, how about posting it?

Joseph

You need to check with Scanners Unlimited in San Carlos. They have been
"the" scanner shop in the SF bay area for years. They have alot of
frequency books and are VERY helpfull. It would be well worth a drive from
as far away
as a hundred miles in my opinion for the info and to check out all of the
latest gear.

I have no connection or affilation with them other than being a verry satisfied
customer.

A lot of them are now trunked.

Try http://www.ggw.org/nf2g/ontario.shtml and follow the links to
Metro Toronto, York Region, or anywhere else shown on the map.

You sure you got enough there for relevance?

"10-4 good buddy. I'll see you on the flip side" is a coded message.

"Code" in and of itself, does not mean "secret code."

4641. BC60XLT and comparable Radio Shack model?

Newsgroup: rec.radio.scanner
Date: 1997-08-19 00:00:00 UTC
From: gt6955a@prism.gatech.edu
Message-ID: <5td9at$p30@acmez.gatech.edu>
Source record: 188314
Cross-posted to: rec.radio.scanner,rec.autos.sport.nascar

Hey,

just one more question.. I have BC60XLT without the manual. Is there a comparable model number from RS, because I can get there manuals off the web. The closest I found was the Pro-28 (205-0508).

Anyone have any leads?

brian

reply via e-mail, or post if you really want to.

thanks

From: Steve S <kf4nnq@hotmail.spam-off.com>
Message-ID: <33FA2E0C.37C@hotmail.spam-off.com>
Source record: 188315

Not sure what a four letter call would be but NATO does use 3 letter
calls from a comsec document and it changes frequently.

RealAudio and RealPlayer can work as standalone programs, if you know
how to feed them the correctly formatted address for a server.
However, RealPlayer requires a Pentium processor.

Having heard enough rumblings from the direction of the
Capital, I decided that we need a centralized discussion area
for any legal action we wish to take regarding scanning.

So, I created this list (and it's digested counterpart).

To subscribe to this list, send a message like this:
To: scan-legal-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-legal-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

Digests go out once a week, Monday mornings.

Tell your friends and spread the word!

Items open for discussion are things like how we can educate
our legislators and the media.

Interesting. I guess that speaks well of your demeanor in handling people who act like jerks. Just curious about one other thing (as a student of criminal justice) - in a case of OGA involving a recalcitrant scanner user, would you [theoretically] make a physical arrest or would you be able to issue an appearance ticket?

Also, what's your professional opinion on confiscation (of scanners)?

>One other thought on citizens with scanners. I might have entioned
>that I never had a problem with that and in fact found it to benefit

Now I have another problem, what to do LEGALLY with my functional Ramsey SS-70 Voice Scrambler/Descrambler? I can't legally possess it with my scanner, knew I couldn't use it with ham gear, found out I can't use it with GMRS or CB gear, now what? Cordless phone? 49MHz walkie-talkie? Baby monitor??!!?? Anyone want an SS-70?

>TWO FOLKS SEE RIGHT THRU THE BS STORY, and comment:
>>> Yeah, but how did you know he was bragging in the first place? Your
>>> first sentence states that he was talking about how safe his new phone
>>> was. How did you know that untill you found the freq. in the clear?

I have a scrambled phone user in my neighborhood. On my PRO-2004,
PRO-51 and PRO-2006, the signal is unreadable. Reaching over to turn
on my older PRO-2003, THE SIGNAL IS COMPLETELY READABLE! I don't know
what causes it. I have yet to explore the theory of tuning off center
frequency, but that would be no problem. Just tap off a 455 kHz IF
and feed it to an all-band receiver. Tune up, tune down. Do it again
with the BFO turned on. It may work, it may not. I don't know.

4662. OLD WURLITZER JUKEBOXES WANTED BY COLLECTOR !!

>>>>>>>>>>>>>>>>>>JUKEBOXES WANTED<<<<<<<<<<<<<<<<<<

I am a jukebox collector and am actively buying '40s & '50s jukes.

I am especially looking for Wurlitzer Jukeboxes manufactured in the '40s.

Models 600 700 800 850 950 1015 1080 1100 1700 1800 1900 2000

These machines can mean cash for you. I buy machines in ANY CONDITION !!

I pay cash and will pick up. Also buying parts boxes.

Seeburg, AMI,and Rockola jukeboxes from the '50s are also on my buy list.
Check the back of the jukebox for a metal identification tag which will
contain the model number. Let me know for a prompt and generous offer !!

Thanks,

Mark Hartman

I have found this one advertised, but would be curious how well it works.
Does anyone else have info on this or any other scanner card?

Sorry to be terse but this is a very FAQ. Get the Police Call SoCal
edition. The 39mhz freq's are in use in San Diego County and work great!

Good Monitoring,
Don :-)

Any use of the light will reduce its life expectancy. Modify the switch for an off position. This is easily done. You probably need the service manual. I did it on all my 2004/5/6's.
Good Monitoing,
Don :-)

Grove sells an inline "box" for opening up the 800mz freqs.

Any one had experience or knowledge how well this unit performs, are there others available.

Seems to be a better idea than cutting in a brand new radio and voiding warranty.

Dave I posted a reply regarding NiMH batteries but I think it will
apply to NiCD batteries as well. Check out an R/C hobby supplier called
Tower Hobbies. They sell all kinds of batteries, NiCD and NiMH. You
can find them at http://www.towerhobbies.com

I'm pretty confident you can find what you're looking for there. If
not, call them, they're pretty helpful on the phone too.

Good luck,
Dean

You may have to "delete" a memory by overwriting it. I had to do
this with my old Regency HX1200.

I would program 30.000mhz in any channel I wanted to delete.

I recently obtained the same scanner along with the owner's manual.
The manual doesn't cover deleting a single channel and I haven't been
able to find a way by goofing with it. From what I gather, if you want
to completely delete channels, you have to leave the battery off the
unit for over 30 minutes and let the memory erase ALL the channels.
Pretty dumb huh?

It should work. If the deviation on an FM signal is small enough,
the signal looks just like an AM signal (not enough deviation to get
the any sidebands above the first). You would have to tune off frequency
to decode it though (LSB tuned above center frequency or vice versa)
since the voice spectrum would still be inverted.

From: Keith Beidelman <kbeidelman@iquest.net>
Subject: PRO-2032 Scanner Modifications

I had been looking for a cellular restoration modification for the
PRO-2032. I
finaly gave up looking and ordered a service manual for the radio. It =
turns
out that
this radio is a next generation design of the PRO-2006. It still uses
option selection
diodes which are scanned as an extention to the keyboard matrix. The =
diodes
for the=20
option selection are surface mounted in a soldered in shield on the =
bottom
side of the=20
circuit board. By examining the artwork for the circuit board which was
given in the
service manual along with the schematic, it was determined that the =
scanner
can be
modified as follows:

1) Cut the lead on the anode of D35
2) cut jumper JM69 in half
3) solder a wire between the anode of D35 and the side of the jumper
closest to=20
the label for JM69.

If you have a FAX available, I can send you some documentation which =
will
make this
procedure clearer.

I have implemented this modification on my PRO-2032.

This is a multi-part message in MIME format.

Free Acars Modem Software For Windows

See Attatched Web Page.....

Mike@mcmail.com

http://www.mike.mcmail.com/acars.html

Content-Disposition: inline; filename="acars.html"
Content-Base: "http://www.mike.mcmail.com/acars.html"

WACARS - ACARS Reception and Decoding Software For Windows

WRACARS is an ACARS modem for a PC.

The software uses the PC's sound card receive ACARS
traffic from a suitable radio and then decodes it using the main processor.

The software is still very much Alpha code written as an excercise
in DSP and to brush up a bit of Windows programing.

Data from any packet with a valid header is shown top pane.
Corrupt packets are shown in the bottom pane.
Valid packets are sorted by aircraft registration on reception.
Airline flight numbers are interpreted and expanded if recognised.
There is also the beginings of message decoding. The airline companys
seem to use different message formats so decoding is limited
to expanding IATA and ICAO airport designators.

The decoded data can be save to a file for later inspection of appended to the
end of an existing log file. The saved file uses tab characters to delimit the
fields so it can be process easily.

REQUIREMENTS:

PC with Windows 3.1 of later,
The program needs quite a bit of horsepower.
It's only run on my P150 so far so I don't know
The minimum CPU spec.

Soundcard capable of recording at 19.2 KB/sec,
This is a non-standard rate. It's only been tested
on my SB16.

Radio receiver with audio cable for connection to soundcard.

LICENSE:

WACARS v0.1 is FREEWARE. This software may be freely copied and distributed providing that the program and accompanying files are not modified in any way without prior written permission of the author. Any charges made for distributing this software may not exceed that of the cost of the distribution media. You are granted a license to use this software providing you accept the disclaimer below.

DISCLAIMER:

Although this product has been tested by the author, he accepts no responsibility for any damages caused by the use or misuse of this software. This software is distributed 'as is' with no warranty expressed or implied. The author will not be responsible for any losses incurred, either directly or indirectly, by the use of this software. Use this software entirely at your own risk. If you do not agree to these terms then you must not use this software.

INSTRUCTIONS:

1. Install Software. wacars.exe goes where ever you like. Acars.dat needs to go into your Windows directory.

2. Connect the audio for you radio to the line-in of your sound card.
Tune to an ACARS frequency and turn the squelch right off

3. Use the Windows mixer utility to adjust the recording sound level.
About 1/2 maximum when a signal is present seems about right.

5. Start Program

Data from any packet with a valid header is shown top pane.
Corrupt packets are shown in the bottom pane.

Click To Down Load Program File

I recently found a good way to make cash. I was recently in the newsgroups when I came across this article. I certainly don't know any of the individuals involved but, as you read on, I think youl'll agree it makes a lot of sense. Here's the original article:

" A little while back, I was browsing these newsgroups, just like you are now, and I came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right this must be a scam," but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and addresses stated in the article. You then post the article in at least 200 newsgroups. (There are thousands.) No, catch, that was it.

You can make up to over $50,000.00 in 4-6 weeks, maybe sooner! I SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right? One person who very recently tried it said it worked like a charm. He started getting money in the mail! He was shocked! He figured it would end soon, and didn't give it another thought. But, then the money kept coming in-tripling in size and multiplying by 10-20 times the amount that he got in the first week! In his first week he made a total of over $1000!!! In the third week he had over $10,000 and it's still growing! This is his fourth week and he's made about $42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community and is deemed perfectly Legal, but being a very cautious person, I also wanted to check it out with the US Post Office. I called them (1-800-725-2161) and explained this process and asked if there were any regulations that would be violated doing this. Without hesitation, the post official also said it is legal. At this point, I felt comfotable going ahead and joining the process.

Let me tell you how it works and most importantly, WHY IT WORKS!...Also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money. The process is very simple, and it consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following in each sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #. (# = Placement of the person who you're sending to on the current

address list). In this way, you're not just sending a dollar to someone; you're paying for a legitimate sevice.

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in them will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, each having a piece of paper and the $1 bill inside. NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 M. D'Amico
131 Blueberry Dr.
East Greenwich, RI 02818

#2 G. Fernandez
13460 SW 25th St.
Miami, FL 33175

#3 C. Budde
1230 Rona Parkway Dr.
Fairborn, OH 45324

#4 G. Blum
P.O. Box 180267
Coronado, CA 92178-0267

#5 M. Holiday
5511 Carolina Beach Rd. #28
Box # 145
Wilmington, NC 28412

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close
to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200,
but remember, the more you post, the more money you make!

THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200! **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5
persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my
name at #3 and only 5 replies each, I will bring in an aditional $125.00!
Now,those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00!
OK, now here is the fun part , each of those 625 persons post a MINIMUM 200
letters with my name at #1 and they each only receive 5 replies that just
made me $3,125.00!!! With an original investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So let's put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. Then start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so- People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new HONEST users and new HONEST people who are joining the Internet and newsgroups everyday and are willing to give a try? Estimates are at 20,000 to 50,000 new users everyday, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be HONEST. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

WARNING: YOU ARE NOT GARANTEEDED TO MAKE MONEY. YOUR SUCCESS IS DEPENDENT ON OTHER HONEST PEOPLE LIKE YOURSELF SENDING MONEY.

This may sound bad, but remember, if there are people like you and me that are willing to do it, then there are many more out there who will try. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to Make the money!!

Here's my way of how it's not a scam-

-I'm only getting $1 from you

-You do the same thing

-There are other people on the list, not just me!

-You are not guaranteed or promised anything

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most HONEST way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again."

I just received the article yesterday and I am sending my money to my fellow money makers today!!! Sounds like a dream come true to me, GOOD LUCK and remember HONESTY, HONESTY, HONESTY = 'MO MONEY, 'MO MONEY, 'MO MONEY !!!

Damark would like everyone to believe that they are a liquidation catalog.
I've seen local stores out price them on much of their stuff.

A message from the ARRL about this? How did you find it? I've been a League member since 1981 and I have never seen the ARRL take any interest in scanner-related legislation before. They had absolutely nothing to say about ECPA or TDDRA. What does their message say?

Source record: 188217
Cross-posted to: rec.radio.scanner,rec.radio.swap,pdx.forsale

For Sale, Tiny 2m/440 Dualband transceiver, Standard C508A.
It's slightly bigger than the VX-1, but you can scan any set of
frequencies.
Fits in your shirt pocket and still leaves room for your smokes, or
whatever vices you keep in your pocket.
60 memories
Wideband receive includes aircraft, 460 and 800 PS and cellular.
Makes a great pocket scanner.
Wideband transmit mod available, but not implemented.
This has a very sensitive receiver with low intermod.
CTSS and all the usual except no touchtones.
runs forever on two AA cells.
Comes with Nicads and a homebrew drop-in charger.
Very nice shape, non-smoker, with box and manual.
Check it out at stdradio.com
$225 prepaid shipped.
Located in Portland, Oregon

If you're considering a VX-1, this is a good alternative. I played
with a VX-1 for an hour or so. Managed to lock it up twice requiring
full reset. Then there are all the issues about scanning, Lithium-ion
battery availability, funky 4-pin phone plugs, etc.

: for an off position. This is easily done. You probably need the service
: manual. I did it on all my 2004/5/6's.
: Good Monitoing,
: Don :-)

Many 2006's came with a off position....the early ones(the ones without the "A" at the end of the catalog number), however had a dim position instead.
All that needs to be done to make an off position on these units is to remove a resistor on the board that the switch is attached to.

Buy something OLD like a Bearcat 200XLT, the best sounding scanner ever made. Everything out there that is new, sounds and feels like shit! However, since you are allready used to the sound and feel of a Radio Shack Scanner, just about any other brand out there will be better than what you have now.

Additionally, Sheriff's are already trunked, as is county fire, but I'm
pretty sure that City Fire still b/c's the calls on their primary, 153.890
or 153.950.
Other things that are always active around there are :
The Agency Formerly Known as the California State Police, now CHP but
still charged with the care of State buildings and officials
460.375 - Central Valley Dispatch
460.450 - Investigations
Also : CHP South Sac is on the Black - 42.46 Disp 42.70 Mobile
and North is on the Gold - 42.12 Disp 42.20 Mobile
CLEMARS 154.920 and 460.025 are usually pretty active as well as the
NorCal Law Net on 159.030
If I think of any others, I'll be sure to let you know...

You obviously haven't used an AR8000, MVT-7100/7200, MVT-9000 or the new RELM HS200. Even the older BC3000XLT does pretty well in the sound department. The new BC235XLT could use some improvements in this area though. But anyone who bases their radio buying primarily on the sound quality isn't thinking too rationally. The BC200XLT was a fine scanner in its day and is a nice collector's piece but it can't compare with the newer radios with similar or superior performance but which have a lot more features.

Roy,
I currently own over 30 radios and can probably give you some pointers on what to consider if you tell what type you are looking for(base, mobile or handheld), the price range, frequency coverage and basic features.
You might also want to poke around my web site below and educate yourself on what's out there.
Good luck and happy reading!

bytes

radw3002.zip RadioCtl v0.2: Radio Control prog for Win3.1

RadioCtl v0.2 is a computer control program for ICOM, KENWOOD and AOR
radios using Windows 3.1 or Windows 95. The program features 1000
frequency channels, 100 scan and search banks, and DBASE compatible
frequency lookups. Delay, resume and attenuation can be set on a
channel
by channel basis. All the software features you wish had been
included
in your radio in an easy to use GUI.

Special requirements: ICOM radio with CI/V interface, KENWOOD radio
with
RS232 interface, AOR3000 or AOR8000 radio. Computer with RS232
(serial)
interface.

Shareware. Uploaded on behalf of the author, Lydia Rosa.

Hello all. I need to figure out a way to listen to my Sony walkman (srf-39) and my scanner (pro 38) at the same time. I just listen to the locals on my scanner,so I don't get a whole lot of action. Is there a way to use the same pair of head phones at the same time and have the scanner shut down or override the fm signal to the headphones so I can hear the scanner, then resume the fm when the scanner is done? I want to keep the fm stereo quality also. I wear my scanner on my belt along with the sony at work, so if I have to make a gizmo, it would have to be really small. Any ideas would be greatly appreciated.
Thank you!
Roger

Try determining who is the national distributor for Panasonic products
in Australia. From there you should get some leads as to the
retailers.

Source record: 188243

Has everyone been afflicted with some sort of scanner-related disease? I can't believe the number of people who have been asking absurd sums for scanners lately, especially the PRO2006 and any scanner capable of tuning cell freqs.

The PRO2006 is a fine scanner and all, but why anyone thinks someone will pay more for it used than it sold for new, is beyond me. Wait a few weeks and someone will come along with a more real-world offer ($250 to $300, in my opinion).

And where does this idea come from that if a scanner is cell capable it is worth more? It's some dumb newbie notion without any facts to support it. No scanner is worth more because of cell capability--it's much to easy to buy scanners with this capability (one that is fading fast, regardless).

Ask what you want, but don't try to pass this stuff off as something so valuable that most people are willing to be gouged to get it.

Robert,

I Think they went to a UHF trunked system.

My info shows a Motorola 11 channel system. Unfortunatly there is no scanner available to track this with. I only have eight of the 11 frequencies. They are:

Ch 01 406.3500 MHz
Ch 02 406.5500 MHz
Ch 03 406.9500 MHz
Ch 04 407.3250 MHz
Ch 05 409.7500 MHz
Ch 06 409.9500 MHz
Ch 07 412.9250 MHz
Ch 08 413.0500 MHz
Ch 09 ?
Ch 10 ?
Ch 11 ?

Search for the remaining frequencies in the 406-420 MHz Range.

Let me know what else you find.

Regards

Ed

The frequency you want to be listening to is 154.100. That is the
Hennipen County Sheriff North dispatch. The number to listen for is
5100. Those are Brooklyn Park police cars. I believe Maple Grove,
Osseo, Rogers and a few others are all dispatched on that frequency.

From: Bob Brubaker <bob@belvoir.army.mil>
Message-ID: <5tek8d$87t$1@nozzle.tacom.army.mil>
Source record: 188279

Some time ago I posted a question asking what would be a good mobile magnetic mount scanner antenna that worked well on 800Mhz.

I got a response suggesting the Radio Shack Cell Phone Antenna. As a co-linear it had some gain at 800Mhz and it looked like a whip at the lower frequencies.

Seemed reasonable to me, but when I tested it ....

Reference for this test is a rubber duck antenna on a Pro-26. (I've got over a dozen rubber duck antennas. I used the one that I found that works best in the car)

The Cell Phone antenna was on my trunk. It definitely improve reception on the 800 band. Unfortunately it just as definitely made things worse on the 450Mhz band. If worked OK around 150Mhz but I didn't spend enough time checking to really compare it to the rubber duck,

SO BACK TO THE QUESTION - Does anyone have any suggestions for a good mag mount scanner antenna that favors the high bands.

Thanks for any help

Bob W4NNG

Hi Tom,

Sure do. They operate on the New Jersey State Police 800 mhz Motorola
trunked radio system. To properly follow them you would need a Uniden
Trunk Tracker. Refer to my web page for frequency, talkgroup, and
other information on the NJSP as well as other South Jersey agencies.

: I paid for it... so is the asking price above unreasonable..
: I'm not quite sure from the comments here... what is the
: going price for a very little used Pro-2006?

I purchased two for $200 each. However, if you wait long enough, a fool
is certain to show up.

The cellular mod is going to be worthless in a few years - as the
carriers are converting to digital - which the 2006 cannot handle.

In a couple of years, any scanner without NBFM is not going to work too
well, as the FCC has mandated the conversion to 12.5 KHz deviation, and
even narrower later.

The following is a letter I sent to my elected federal reps and others concerning H.R. 2369. Feel free to use cut and paste and use it as a letter to your lawmakers. It's imperative that we STOP this legislation. That will only happen if we call and/or write our federal elected leaders! I have more info on the proposel if you need it.

Congressman Paul Kanjorski
Rayburn Building
Washington, D.C

Dear Congressman Kanjorski:

I recently wrote to you concerning my opposition to H.R. 1964 which was introduced by Rep. Edward Markey. I must write to you again to protest another bill which strikes at the heart of the freedom of countless Americians.

I am talking about H.R. 2369, which would make it illegal to manufacture a public safety radio scanner. I have 3 such devices. One in my home, one in my vechile and one at work. I am an honest law abiding citizen, who believes it is MY RIGHT to keep tabs on my local public safety agencies. I want to know if there are burglaries on my street, or if my neighbors house may be on fire.

H.R. 2369 is the direct result of someone listening to a cell phone call of the Speaker of the House. It is an over reaction which can have far reaching negative effects. I believe that anyone who uses information overheard on a scanner for personal gain or to committ a crime should be prosecuted to the fullest extent of the law. The federal goverment already has that power under the Communications Act of 1934.

The sponsers of H.R. 2369 would have Congress believe that anyone with a scanner is just out to listen in on people's phone calls. That is simply NOT TRUE!! Yes, there are some people who do that, and while I believe it's morally wrong to do so, I also believe it's VERY dangerous for a goverment to begin dictating what parts of the electromagnetic spectrum I can and can not listen to.. H.R. 2369 would not only deprive me of my rights but in
effect wipe out an important product which is produced by thousands of people who work on assembly lines all over this nation.

H.R. 2369 would also have a negative impact on law enforcement. There are many times when a crime is committed and an alert is broadcast by police agencies giving a description of the suspect. Private citizens, hearing that broadcast will many times see the suspect and call authorities. That

tremendous tool will eventually cease to exist under H.R. 2369.

I am attaching a message from the ARRL, The American Radio Relay League. The ARRL represents thousands of ham radio operators. The ARRL believes H.R. 2369 could affect ham radio operators, who are a vital resource, especially when it comes to assisting in emergencies.

Please use your good offices to keep this proposal from reaching the House Floor. I fear that outlawing scanners is the same as outlawing guns. You do not solve the problem by getting rid of a device. You enforce the laws which are already on the books.

Sincerely,

Robert Reynolds

>remove a resistor on the board that the switch is attached to.

Or just find the appropriate trace on the PC board and cut it.

I have a 2005, and removing the resistor would have required removing the whole front panel of the scanner, removing the circuit board carrying the switch, unsoldering the ground shield that covers its entire back side, and then removing the resistor. But cutting the appropriate trace could be done with the front panel still on the scanner, with the ground shield still in place. So that's what I did.

You'll probably need a service manual to locate the right trace.

Dave

>Pretty dumb

There is a way to clear all the memories:

Press and hold three keys simultaneously and turn on the power switch:

2, 9, and MAN

A similar undocumented method will load some channels with test frequenies:

Press and hold three keys simulatneously and turn on the power switch:

2, 9, and SCAN

Someone posted this a long, long time ago.

I found a utility that is helpful to those of you who search for frequencies. It is attached. It is a DOS utility therefore it must be run at the DOS prompt. The syntax is "chart freq1 freq2". An example would be "chart 460 461". This will display all the frequencies from 460 to 461 in .005 steps. This can be output to a file or I prefer to send it to a printer. This is accomplished by doing the following, "chart 460 461>prn". Multiple freq's can be printed by widening the frequencies such as "chart 154 158>prn". E-mail me (without the x's" if you have questions.

I want to give the credit for this program to its author Steve Sampson of OK.

Like I said, this is just a bare bones utility that you can use when first starting out. I have advanced to Frequency Filer v3.2. This can be downloaded from http://members.aol.com/jgraff/homepage.htm. You can also e-mail me for a copy of a charting WordPerfect file that I use which you can modify somewhat.

Good Luck

Try this:

Space Shuttle/Mir Radio Coms - Updated 7/11/97

Shuttle amateur Radio experiment (Sarex) Downlink: 145.550 FM
This is for both voice AND packet modes. So if you hear short
bursts of noise they are in packet mode.

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Scan the 2 meter band between 144.00 and 148.000
or ask a local ham if they know of any freqs in your area.

On HF, WA3NAN - the Goddard amateur radio club
transmits the missions on: 3.860 (all freqs. in single side band)
7.185
14.285
14.295
21.390
21.395
28.650

These are dependant on propagation! In N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

Mir 2 meter FM amateur radio downlinks are on 145.800 (Europe) and 145.985.
These are for both voice AND packet radio. So if you hear short
bursts of noise they are in packet mode.

There is a ground control freq. of 143.625 FM that is sometimes
used as well, but NOT for amateur radio! I hope you speak Russian!

Mir is also now on 70 cm with voice downlinks on: 437.950
437.925
Packet downlink: 437.975

Happy listening!

Tom

What do you mean by "radio industry people?" If you are talking about Motorola, Ericsson, E.F. Johnson, Bendix-King, and all the other selling hardware and services into the cellular, SMR, SkyPhone, and pager markets, why would they care about HR2369?? They don't sell scanners for the consumer market. They certainly wouldn't waste any time and money lobbying against it because it doesn't effect their business in any meaningful way. The Tauzin bill is the outfall of what many people see as the abject failure of the ECPA and it's revisions to effectively "scanner- proof" analog cellular communications, and other segments of the industry have weighed in saying "me too," if the cellular industry seeks scanner- proofing we ought to have it as well. If the Tauzin bill comes to pass, it will put the U.S. in the same position as Europe in regard to scanners. In Europe, consumer sales of receivers capable of receiving frequencies above 30 Mhz have been restricted for years. The only legal receivers above 30 Mhz apart from those "service specific" devices such as pagers, SMR and other industrial radios, satellite receivers, PCS, and cell phones are receivers/transceivers for the amateur radio service provided they are only capable receiving frequencies within designated amateur radio bands.

If it's in mint condition, $300 would be a fair price (plus shipping).
I've seen them go for as little as $250, which apparently doesn't disuade
some dreamy dope smokers from asking $350 or even $375!

Why are you suggesting that this would be a good place to buy a TT? The $299 that Danmark is asking ($269 if you are a member) is for suckers. Everyone else is selling if for a lot less, even Grove Gougers, which is selling it for $299 with an better antenna. Best I've seen is $229 at www.copper.com.

No one but the SHADOW knows why you posted this drivel.

I am happy for your diligence and perspicuity...but all I was pointing out is "the close-out king of catalogue-itis" is selling them too....

i mentioned the price. Hey, lots of people don't have access to what you have.

Radio Shack is selling them too: 299.95

So shoot me.

>
> Steve S.

If the radio service has no prohibition of scrambling, (most of them
don't) then you can use it. Inversion scrambling is rarely used anymore,
I don't even know if any hardware is still available for it. If not,
they're pretty easy to build yourself. Inversion scrambling has little
security and may prevent casual listening, but it's hardly a secure
channel. One trick you can do if you're looking to scramble audio and
the stations are fairly close together is to use the audio from a
broadcast station that the other stations can also receive. So you could
pick a strong FM station and inject the audio into a balanced mixer along
with the your microphone audio and have scrambled audio to feed into your
transceiver. The audio is recovered on the receiving end the same way,
the scrambled audio from the receiver is mixed with the broadcast audio
and you have clear audio. The audio will clear up during the times the
broadcast station is in dead air, but those are usually short enough as
not to cause any problems. This gives you a bit more security than a
fixed tone which is what most of the old inversion systems used.

Agreed. But it's nice to know that there are choices.

Radio Shack sells them too at $299.95.

Which points up this idea: people will buy at RS because they can go there in person and still get a 30 day return on them if they don't learn too quickly how to do it. Or if there is no reason to buy them: no Motorolla system in their area.

Damark is a marketing company who poses as close-outs agreed.

But they really have the right idea: why not sell a hot item to the thousands of their catalogue-customers and cumstomers to be and make some good profits for all those people who have not bought an item for the last year.

Remember those alkaline chargers you saw on tv with dick clark hawking the units: at 59.95. Damark now sells them for 19.95.

and you know, this product works: it actually recharges an alkaline over and over again until it exhausts. I use them for my pagers and small things with small draws....

Damark sees opportunity and "goes for the gusto"....

> down and you have one damn good scanner antenna.
>

I agree! I had my scanner hooked up to a large outdoor tv antenna... and found it to be surperb for most of everything. Of course, it was also able to be rotated by means of a rotor... and I also was using a television Antenna Preamp that REALLY did wonders as well. Although not one piece of the antenna was designed for this.... it all really made a big difference! One more thing... I would suggest if you DO invest in a TV antenna for this purpose.... buy one that has a very LARGE no# of elements. Due to the fact that you will be listening to a broad range frequencies, your antenna will repsond better over the entire listening spectrum that you are interested in. The larger no# of elements if I recall correctly, also serve to make the antenna more "directional".

just a quick note. This is not true! In the Netherlands _ALL_ frequencies can
be received legally. You are right that in Germany (and some other European
countries) there are some resctrictions but not in all of them!

And it is of course legal in every country to receive FM radio between 90
and 108 MHz.

Best regards,

Patrick van de Steeg

4782. ANTI-SCANNER LAW

Newsgroup: rec.radio.scanner
Date: 1997-08-21 00:00:00 UTC
From: worksntv@aol.com
Message-ID: <19970821151801.LAA06974@ladder02.news.aol.com>
Source record: 188166

Remember--first they'll restrict the frequencies we can listen to--cell's--then they'll broaden that, (HR2369), then they'll suggest other areas we shouldn't watch or listen to, then they'll ban our guns, then the 1st amendment will go and we will be powerless.

The following is a letter I sent to my elected federal reps and others. Please feel free to use it as an example of a letter you can write. WE MUST stop this legislation!! If we don't, scanning as we know it will end! I have particulars on the bill. If you need more info please e mail me.

Congressman Paul Kanjorski
Rayburn Building
Washington, D.C

Dear Congressman Kanjorski:

I recently wrote to you concerning my opposition to H.R. 1964 which was introduced by Rep. Edward Markey. I must write to you again to protest another bill which strikes at the heart of the freedom of countless Americians.

I am talking about H.R. 2369, which would make it illegal to manufacture a public safety radio scanner. I have 3 such devices. One in my home, one in my vechile and one at work. I am an honest law abiding citizen, who believes it is MY RIGHT to keep tabs on my local public safety agencies. I want to know if there are burglaries on my street, or if my neighbors house may be on fire.

H.R. 2369 is the direct result of someone listening to a cell phone call of the Speaker of the House. It is an over reaction which can have far reaching negative effects. I believe that anyone who uses information overheard on a scanner for personal gain or to committ a crime should be prosecuted to the fullest extent of the law. The federal goverment already has that power under the Communications Act of 1934.

The sponsers of H.R. 2369 would have Congress believe that anyone with a scanner is just out to listen in on people's phone calls. That is simply NOT TRUE!! Yes, there are some people who do that, and while I believe it's morally wrong to do so, I also believe it's VERY dangerous for a goverment to begin dictating what parts of the electromagnetic spectrum I can and can not listen to.. H.R. 2369 would not only deprive me of my rights but in
effect wipe out an important product which is produced by thousands of people who work on assembly lines all over this nation.

H.R. 2369 would also have a negative impact on law enforcement. There are many times when a crime is committed and an alert is broadcast by police agencies giving a description of the suspect. Private citizens, hearing that broadcast will many times see the suspect and call authorities. That tremendous tool will eventually cease to exist under H.R. 2369.

I am attaching a message from the ARRL, The American Radio Relay League. The ARRL represents thousands of ham radio operators. The ARRL believes H.R. 2369 could affect ham radio operators, who are a vital resource, especially when it comes to assisting in emergencies.

Please use your good offices to keep this proposal from reaching the House Floor. I fear that outlawing scanners is the same as outlawing guns. You do not solve the problem by getting rid of a device. You enforce the laws which are already on the books.

Sincerely,

Robert Reynolds

Some Unidens will clear all stored freqs and load a set of maintenance freqs when you press and hold the 2, 9, and L/O (lockout) keys down while powering up the scanner. You lose all stored freqs so write them down first. Not sure if that will work on yours.

> > You have tried programming "0" into the memory, right?
> >

That works on my PRO-46, does not work on my BC800XLT. I store 000's or 123 in unused channels so I can quickly spot free channels. If you don't lock the unused channels out they will, of course, be scanned and slow the cycle down a little.

I went through this recently. I had noise in the 30-50MHz band that constantly stopped my BC-9000. It was like a comb with spikes every 100KHz or so. Best of all, the whole thing would wander up and down the band. I had to lock everything out.

Of course, I was ready to blame TV preamps and the power company but one day when the power went out, I connected the scanner to the UPS with my computer. Uh oh, still noisy. Ain't no power or TV preamps around here now.

It was the damn HP 4L laser printer.

I put the antenna on the roof and that took care of it for the most part. Now I have a new system and a Zip drive in line with the printer and lots of noise again.

What do you suggest? Ferrite cores on the Zip cable and the printer cable? Can you get 'em at Radio Shack?

Thanks,
Malcolm

I can think of 5 or 6 mods. What do you want? The doorstop mod? Lid prop mod? Smashed keyboard mod? Fishing lure mod? Bird feeder mod?

Now if you think "mod" means cellular restoration, it doesn't and you can't.

This scanner so far cannot be modified to receive frequencies that are blocked. It can however be modified for sound quality, number of channels, and the addition of an S-meter. I believe that someone has put the mods somewhere on a FTP site but I do not know where.

I just went to my local Radio Shack today, and they had never heard of
the trunk tracker- I had to show it to them in their own catalog. It
just hasn't been delivered to the stores yet. I could not find any
indication in the catalog as to when it will get to the stores.

Received word that Santa Fe Distributing of Lenexa, KS
will be carrying the Uniden BC895XLT base model Trunk
Tracker for $279.95. Approximate availability is October,
but that is not definite. Only issue is that they deal
wholesale, or with current established customers only.
They sell the hand-held BC235XLT for $229.95.
Their phone # is: 800-255-6595

The Pro 90 has just been introduced. It will be there as soon as
everyone gets over the UPS strike. There are 5 new scanners.

Check out the new catalog: TECH America. It costs $2.95 at Radio Shack
(you get your $3 back on your first order). Or you can order a catalog
free via 800-877-0072 or http://www.techam.com. NO minimum orders!!
Trunk Tracker available thru them as well as Standard radio products.
Good selection of parts, test equipment and ham gear. Operators are
good.

Why should the privacy of personal communications be protected? Let
the sender use digital schemes that keep others from hearing what they
are saying! That keeps new laws from being written and allows all
scanner users to continue to scan all bands.
This liberal cry baby attitude displayed by those who are worried
someone might be heard while using a radio is so dumb!
Let the sender be responsible for his own security if he so desires.
STOP OUR GOVERNMENT from being our Nanny! We do not need government
officals trying to control us because they think they know better how to
run our lives!

The only 100% safe type, unplug it when a T-storm gets close!

I use 2 antenna, one outside and the other in the attic. I unplug the external one and use the attic one if the lightning gets close! Also remember to switch it if you leave the house!

Actually I leave it on the attic antenna most of the time and switch to the outdoor one for long range scanning.

OH, when I say "SWITCH" I mean unplug the cable and use the other one. A antenna switch would do NOTHING to stop lightning!

The problem with partial recharge of standard alkalines is their thin
internal separator, so they are prone to develop internal shorts (zinc
dendrites) when recharged. So they may go dead in a few days on the shelf.
Alas, Renewals do this to sometimes, but they are engineered to reduce
this risk.

An older Bearcat 760XLT would be best for you. Small size (about 1.25 inches high and around 6 inches wide) and it's controls are backlit for ease of use, and mines modifiable for cell' even though it hasn't been (who care's?).

I've got one, but I ain't selling.

I hear ya on that Pro-26 thing. I payed $5 Benny's for mine..and two weeks later..they said that they were discontinued...probably because there is a mod that can be made..unbelievable how Rat Shack is converting these damn scanners into something that is practically useless. If anybody wants the mod info...give me a note at cskoenig@iglobal.net nobody..and I MEAN NOBODY will tell me that I can't listen to from the airwaves. If anybody has the specific answer on the 26 I would also like to hear that info as well.
Happy Listening

It's no surprise that they don't know what you are talking about at Radio Shack. They seem to barely know anything about their own product line let alone any technology that might exist outside the confines of their stores.

You say TRUCK TRACKING in your message.. Are you really talking about tracking trucks - such as the overland 18-wheelers that can be tracked via satellite?

Or are you referring to TRUNK TRACKING, a totally different idea. Here we are talking about tracking trunked radio transmissions, such as those being used more and more by public safety forces.

In any case, it's no surprise that the droids at RS have never heard of the Uniden Trunk Tracker. But what IS a bit surprising is that Radio Shack is getting ready to release their own version of a trunk tracking scanner (cellular disabled, of course), and they know nothing of it (in your experience at least it seems).

Your best bet might be to go to a decent amateur radio store where they know tons more about radios and scanners and trunked radio technology.

Good luck,

Mike

I have found the best coax to lead in is Belden 9913. It costs a bit more
but has much less signal loss over the frex used in scanning.

A General Motors replacement whip (post mount) can be rethreaded to fit the
top threads of the RS Discone. Takes about 5 minutes for someone with the
correct tap. You can take it to a machine shop BEFORE ASSEMBLY and most
will do it free or 5 bucks. Just take the discone without radials and the
whip. They can thread the whip.

From: Mark <mtaustin@onr.com>
Message-ID: <01bcaeaa$c6c98460$6c1ac8cf@hp>
Source record: 188099

There is floating out there a mod to add a capacitor to the earlier model RS pro 2026 scanners.

If you will remember the earlier ones had a red,yellow and black wire harness. You had to maintain power all the time to retain memory.

The later ones came with a normal coax type power input and would retain memory on their own.

The mod calls for the addition of a capacitor inside and I cant remember the size.

Email it if you have it.
thanks, Mark

I work at a local radio shack store and I've known about the Trunk
Tracker even before it was first sold. One of my friends from school
told me about it several months before they were released. I'm also a
ham operator and a scanner listener. Yes, I will have to agree that
there may be several RS employees that don't know about it. The new
catalogs which contain the PRO-90 were just released and shipped to the
stores this past week. With the UPS strike, some stores may not have
received them yet. Technically, (at least in my area) the catalogs are
not yet available to the customers but will be soon, probably next week.

I do think the price is a little high. Most places I've seen the BC235
for $260. RS sells it for $299, but some other places, such as Damark
and Grove, sell the BC235 for $299 as well.

> Your best bet might be to go to a decent amateur radio store where they

This is probably true in some areas of the country. In Columbus, Ohio,
there are many hams and scanner listners who work at RS stores and are
quite knowledgable in the radio and scanner technology.

If I understand it correctly a cell phone is always looking for the strongest cell site in its range. When it switches to that new site does it's frequency change?? And if you were sayy in the downtown area of a major city wouldnt it be switching all over the place?? and wouldnt that make it extremly hard to follow the specific call if yu were listening on a monitor?? Thanks Dave

Yes, the 90 - 108 Mhz broadcast band was an oversight on my part, but
in Germany and Austria, their respective PTT's seem to frown seriously
on people having receivers capable of receiving frequencies outside
of broadcast and amateur frequencies above 30 Mhz. I've heard horror
stories of people picking up 121.5 Mhz ELT's from people stranded in
the mountains and reporting this to authorities so rescue could be
effected. only to have the PTT pounce on them with big fines for
having reception equipment that was not authorized to them. I remember
a case about 10 years ago, where a sucessful resuce was based on an
ELT intercept, the Austrian PTT still made a court motion against the
individual for having an unauthorized receiver. The Cantonal court
rejected the PTT's motion, but the PTT appealed the case to the
Austrian bundesgericht in Vienna which refused to hear the case, but
it cost the individual involved considerable expense in legal fees to
attorneys working on the defense.

> appreciated.

As with most of the most recent RS (mfr by Uniden & GRE) the frequency coverage is "controlled" by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out (ie Full coverage)

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip). The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through the 800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this answers your query.

Smallest would be the BCT-12 made by Uniden. However, it is
pre-programmed with frequencies by state so you have no control
over what it does and does not scane. It's about the size of
a larger radar detector.
Next up in size would be the Uniden BCT-7. Offers both
state pre-programmed and some user programmable frequencies.
Stack about four TV Guides and you'll have a good
approximation to its size.
Next up in size is probably the older Uniden BC760XLT
and the newer Radio Shack PRO-2046. These have some
pre-programmed frequencies(used nationally across the US)
but are mainly oriented toward you programming in your
own favorite frequencies. These are about the same height
and depth as the BCT-7 but about 1.5" wider.
As for an antenna, you can use a cellular, glass-mount
look-a-like but it won't work as well as a dedicated
magnetic mount antenna for the roof or trunk(Radio Shack
sells a good one). Depends whether you want lower profile
or better pick-up of signals.
Good luck!

Strong signals,

I have a Pro-2006 and a Pro-2035, both equipped with Optoscan boards,
sitting on my Dell Dimension P-200. <G>

I have not added any additional sheilding to either unit. Occasionally
they will lock up to each other, but not often. I use both of these
radios in widely varying environments, and my experience is that the
noise tends to be more of a computer function rather than a function of
the radio.

For example, the 2035 gets hammered at work, where it is located near a
computer show style, no-name, clone case, but has no problem near true
FCC Class "B" rated systems (usually major branded gear), such as my
Dell, previous Zeos machine, I had loaned to me.

I know I'm going to get hammered for this, BUT, (MY OPINION ONLY
FOLLOWS!) AOR radios have failed to impress me performance wise. They
have many "cool" features, but they really do leave me underwhelmed as
receivers and in manufacturing quality.

I have heard of a copper "paint" that is used to coat the inside of
cases (scanner & computer) to improve sheilding. Maybe this will help
you.

>
Doug,

Yes you would program both block 0 and 4 with size S-13. Due to this
sizecode, there are no blocks 1, 2, 3, 5, 6, 7. This would be for
Type I fleets/subfleets. Since the NJSP is a Hybrid system, you would
hear all Type II traffic in either 000-13 and 400-12. It would be
helpful to also program a second trunking bank in the default (Type
II) mode with the same frequencies but only SCAN (not SEARCH) a
selected list of Type II talkgroups like NorthStar, SouthStar,
Air/Aviation, Turnpike Car/Car etc. If I hear sonething interesting
on 00-13 like Southstar being dispatched, I switch over to the second
bank and follow it in scan mode.

You can find all of the frequenceis, talkgroups, etc on my web page
for all 3 NJSP troops. It is very current and accurate.

http://www.erols.com/jcardani/sjscan.htm

hope this helps!

The reason you get the most static in 46-49 and 140-150 is because of
the speed your computer runs at. e.g. 150 mHz

The new catalogs are here. New scanners including a "Trunk Tracker". No cost but you are limited to one per customer (sales receipt, part # is 68-1998).

Also new catalog "TECH America". Lots of parts, test equipment, scanners and Standard amateur gear. At Radio Shack, $2.95 but get $3 back on first order. If you call (800-877-0072) or use their web page (www.techam.com), it is free. Operators are very helpful.

>just hasn't been delivered to the stores yet. I could not find any
>indication in the catalog as to when it will get to the stores.

people at RS are there to be paid for doing absolutely
what minimum wage gets: "...we don't know yet."

i guess the most redundant statement by an RS-bot is
"do you have the catalog number?"....

that was an answer to :"do you sell trunk-trackers?"

minor premise: what if it's not in the catalog yet?

do they go to a special support group for this
debacle? how to they cope after being told the
answer?

what if a thief stole all the catalogs just prior
to opening? In an RS store.

What would happen when someone walked in with a
question?

bill conduit
etc

schuster@panix.com (Michael Schuster) writes:
>The problem with partial recharge of standard alkalines is their thin
>internal separator, so they are prone to develop internal shorts (zinc
>dendrites) when recharged. So they may go dead in a few days on the shelf.
>Alas, Renewals do this to sometimes, but they are engineered to reduce
>this risk.

The other problem with standard alkaline cells is that they have no
pressure vents. Discharging an alkaline cell doesn't build up gas
pressure, so single-use cells aren't vented. But charging *can*
produce substantial pressure, either in a cell that is too dead to take
a charge properly, or if the charger's voltage limiting fails.
Charging alkaline cells in a charger designed for NiCads can do this
too (as can charging NiCads in a charger intended for alkaline cells).

All rechargeable alkaline cells have vents to prevent pressure buildup
in these circumstances. (So do NiCad and lead-acid cells, for that
matter). So incorrect charging can destroy the cell chemically, but
it won't explode.

On the other hand, if you recharge a single-use alkaline cell, under
some circumstances it can explode. I've seen this happen. It didn't
explode like a bomb, but there was a loud "pop" and a quantity of
black glop flew out of the negative end of the cell and deposited itself
in the innards of the charger.

I've been using a scanner with the mod for several months now, and am VERY satisfied with the product. While I have never ordered from Ham Station, I have heard of them and have only heard good things about their prices and services. The G/Whiz board is kind of expensive (somewhere between 75 and 90 bucks I think), but is WELL worth the money if any MAJOR public safety agencies in your area are using GE trunked. Works best on systems with fairly low activity, but is still useful even on very busy ones.

Hope that helps,

Dan

Greetings,

Scanner enthusiasts that live in or are planning a trip to the Cape Cod Massachusetts area may wish to check info at my website, accessible thru the url at the bottom of this message. I have just updated frequency information for each town on Cape Cod, as well as listings for the area by service, to include police and fire. There is also information on a new trunked public safety radio system that will soon replace the conventional public safety radio systems on the Cape.

All,

I just got the new 1998 RS catalog and not ONE of their handhelds they offer this year doesn't get the military UHF band, 220 MHz ham radio band, or the extended coverage of 54 - 108 MHz, 174 - 216, and the UHF-TV band either. I wonder why they discontinued the Pro-26 as well. I wonder why RS's inventory has taken a giant leap backward after they pioneered the extended coverage scanners for a while. Any ideas why?
Chuck, who's glad I have a Pro-43.....

All true. I seem to remember that this was one of the arguments against the ECPA when it was first proposed. In fact, I saw this argument used in one of those question/answer type articles regarding cellular security.

David,

While HR 1964 and Section 2 of HR 2369 would, on their face, only effect frequencies used by commercial radio services that interconnect with landlines, according to the FCC somewhere in the nation there is at least ONE such operator licensed on EVERY category IB frequency. Their interpretation of HR 1964 and HR 2369 is that every category IB frequency would have to be blocked from scanners.

Please e-mail Larry Van Horn at Monitoring Times for more information on this. He's the one who talked to the folks at the FCC. His e-mail address is steditor@grove.net

John

: $375.00 to as much as $475.00 These prices were observed while Hunting
: Ham equipment at several Ham Fest's

Was that the prices they sold for or asking prices? There is a huge difference.

Ham gear at Fest's is often way over-priced. And many of the people there will not come down to reasonable prices - so they pack all their stuff home with them at the end of the meet.

I paid $200 each for mine - both in excellent condition, with manual, box etc. I would not pay any more - but I was not desperate to obtain one either. There are others that will pay more.

>Would like to know anyone's experience with the mod or the company.

I installed a G/Wiz(TM) board inside a PRO-2006 and it worked
pretty well on the Illiois State Police EDACS trunked system.

There are 2 versions available, and you must specify what make
and model scanner you have. I recommend you install a defeat
switch, as mentioned in the accompanying literature.

The board was designed by Terry Brennan, who performs most
of the installations. Although you can buy the board, you
might consider sending in your scanner for free installation
as the board requires alignment once installed.

The G/Wiz(TM) is offered through:

1) Scannermaster, telephone 1-800-722-6701
2) The Ham Station, telephone (800)729-4373

Look for my G/Wiz review in the next issue of
Monitoring Times (Sept. 1997).

: The new catalogs are here. New scanners including a "Trunk Tracker".
: No cost but you are limited to one per customer (sales receipt, part #
: is 68-1998).

: Also new catalog "TECH America". Lots of parts, test equipment, scanners
: and Standard amateur gear. At Radio Shack, $2.95 but get $3 back on
: first order. If you call (800-877-0072) or use their web page
: (www.techam.com), it is free. Operators are very helpful.

I recently went to the first "Tech America" store which is located in Denver.
I was impressed, it has been a long time since I have seen a store stocked
with such an array of electronics parts and gadgets.

I was not asked for my phone number.

The sales staff was helpful and not pushy, most even seemed fairly
knowledgable about what they were selling.

The catalog is marvellous and I understand a new one is due out soon and is
three times bigger than the current one.

I don't live in Denver but I'll go back.

More Tech America stores are due in Atlanta and Dallas and other locations in
the future.

Very interesting. Just two days ago I talked to the Radio Shack media relations
guy about whether radio shack would be coming out with a TrunkTracker scanner. He said they might, eventually. Would appear he is in the same league as the sales people in not know the product line.

> Thanks in advance
>
>
>
>
>
>
To set the upper and lower limits:
Example: To search from 150.0000 to 160.0000 MHz

1. First push manual on your scanner to stop it from scanning
2. Next input 150.0000 via keypad and push LIMIT
3. Next input 160.0000 via keypad and push LIMIT
4. Now push the SEARCH button and it will search all frequencies between
150-160 MHz

Any other questions e-mail me at Eyceman00@aol.com

>Could anyone tell me how difficult it is to replace this backlight?..

From the FAQ article REPAIR TIPS: RADIO SHACK SCANNER RADIOS,

[...]

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022,
PRO-2004, and PRO-2005/6 is implemented by an
electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is
designated EL-501, and is identified by Radio Shack part
#10800050. A new EL panel can be ordered through your
Tandy National parts (see above) or local Radio Shack store
and sent to your home. Radio Shack no longer sells
replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care
and patience. Purchase a service manual, and study the
exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the
speaker unplugged from the main board. The front panel
assembly must be removed from the chassis by removing 4
flat head screws, 2 on each side. You need not disconnect
all the wiring harnesses, though you might have to unplug
one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on
the back of the front panel, located near the back of the
squelch control. Two ground braids must be temporarily
disconnected by removing the screws which fasten them to
the chassis. After removing the volume and squelch knobs,
you must remove 8 small screws which fasten the plastic
front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil
type leads soldered to the display board. It's easier to
cut the two leads from the old EL panel before unsoldering.

A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

[...]

Is the EL panel or a substitute for the 2004 available from some other source?
Or is there a work-around or some other lighting that can be used. My 2004
works like it did when it was new, but I'm tired of squinting to see what
freq. its stopped on.

Thanks.

>cell freqs.

The scanner-related disease which you speak of probably started with the Gingrich incident, an event which made the general public aware of the fact that cellular calls can be received by "police scanners." People will always be willing to pay absurd sums of money for "entertainment" if they think they are going to be privvy to someone else's dirty laundry!!

Greg,

You can go to this web site for a lot of info on Seattle:

http://www.wolfe.net/~daydream/index.html

Besides this, there is always Radio Shack's "POLICE CALL plus Beyond Police Call" for California, Oregon and Washington. You can get a lot on Seattle from this publication as well. But I've never seen a publication on just Seattle.

On Fri, 22 Aug 1997 20:26:15 -0400,
in the newsgroup rec.radio.scanner,
Jeff Krebs <jkrebs@lowdown.com>
from thoughtfully posted:

> Could anyone tell me the procedure for entering a freqency into a memory
> location in this unit?
>
> It is a recent aquisition which I have made functional but haven't been
> able to program.

An Excellent older radio! (I've got two of them).

Nothing real complicated. It follows the regular "Bearcat"
programming conventions.

HOW TU ENTER:

Press <Manual> to stop scanning.

Use "MANUAL" to step to the desired channel, or go directly to a
channel by pressing <#> <#> <Manual>. ie: To go directly to
channel 12, type:

<1> <2> <MANUAL>

To enter 162.55MHz in the currently displayed channel, press:

<1> <6> <2> <.> <5> <5> <E>

(The <E> key in on the lower-right of the numeric keypad)

If you goof, press the decimal key "." twice to cancel entry.

To search a range, 162.4MHz to 162.55 MHZ for example, press:

<Manual>
<1> <6> <2> <.> <4> <LIMIT>
<1> <6> <2> <.> <5> <5> <LIMIT>
<SEARCH>

Press <Search> to continue scanning.

Press <MANUAL> or <SCAN> to exit the search mode.

The "UHF", "LOW" and "HIGH" buttons are used with the black
"Service search" buttons. They toggle on and off the bands while
searching the pre-programmed frequencies.

To lockout a channel, select and display it, then press <lockout>. The "0" in the "rolling zeros" display will change into a little "L".

Th red keys, labeled 10 thru 50, enable entire blocks of 10 channels. The first "block" is channels 1 thru 10, the second block is 11-20, etc.

The <count> key will display how many times the squelch was broken on that channel. The count is reset when you press the <count> key.

To set the clock, press <time> and enter in the time, including seconds:

To enter 1:30

<time> 0 1 3 0 0 0 <E>

The clock is only a 12 hour clock, so there is no AM/PM indicator or "1300". The clock can be displayed when the power is tuned off if you press <clock>.

The <aux> key enables the electronic switch to close during a transmission on any marked channels. This is indicated by the decimal point on the end of the display. This is useful for taping. The switch is a open collector transistor connected to ground (completes circuit to ground during transmission).

That's the major stuff. The rest is easily figured out.

Have fun!

Cheers,
Paul Grohe

I keep reading about how the new scanners can't pick up cell bands. I just bought a RS PRO-66 last week (my first scanner) and it seems to recieve cell phone conversations rather well. I found quickly that they are really boring and stick to the local police bands but I wonder if RS dusted this one off to sell to me or are they still making them to recieve these bands (about 906-916). Any info?? Joel

-> I have a R.S. Pro 2006 and the electroluminescent backlight has grown
-> quite dim over the the years. I have this scanner on 24hrs a day.
-> Could anyone tell me how difficult it is to replace this backlight?

It's not that hard if you can solder, but a replacement backlight will
run over $30 from RS parts. It's better to grab a couple of 'grain of
wheat' bulbs and wire them in.

4919. Help Need Freq. of Fire Depart's in Southern California

The Nevada Highway Patrol is in the process of changing to a new radio system in the VHF High Band.

Frequencies known to be in use:

151.025 151.070 151.100

Frequencies suspected to be in use:

151.010 151.040 151.130

Other frequencies that may be in use:

156.045 156.060 156.180 156.195 157.410 159.180

Anyone having more knowledge of this new system please post same here.

4921. WANTED: 10 codes for Schuyler County, N.Y.

Newsgroup: rec.radio.scanner

> Only in America!

Dittoes that. I think you can add the pre-ban Pro-43 to the list too. I have one although I do have a post-ban casing on it with a Pro-39 back because I dropped mine on the cement one too many times and had to buy a new shell. A pre-ban scanner in a post-ban shell, he heh hehe! B-) RS just sent me the back of a Pro-39 instead of the correct one so instead of griping, I just used it since it's really the same back. The front shell cover says "Radio Shack" on the front while the old pre-ban one said "Realistic." I was considering a newer scanner for more frequency coverage, but since Uncle Sugar pulled the AR-8000 (first choice) off the shelfs and RS pulling the Pro-26 (second choice) off the market, I think I'm better off with the Pro-43 I currently have.

I always favored RS scanners above Bearcat because they offered more coverage but since the new catalog came out, I'm not that impressed with RS anymore. Maybe if I'm lucky, my third choice, the AR-2700 with BFO will still be available.

>plan rather just that Americans are not willing to grow up.

How many Americans rely on TV and news print for their
info?

Would not then the press be the "initiators" of this
problem becoming a law?

If the Americans don't know about it then how is that?

Seems the internet is the only place this problem is
being argued. We are not the majority.

The PRESS is silent. Yet, they too will suffer if this
law goes into effect. The press is beholdign to the
government who allows them to produce what is in
the best interests of the government.

Disneyland owns ABC...what a farce. Those parks of theirs
are Politically Correct little institutions of 'look right'
or else do it far away.

Look who owns the press and then realize who they are really
looking out for so not to displease the ones in power....

who hold them up to the mirror of the FCC.

No one knows what is going on with this law.

No one has ridden their horse through town warning the populace
about it...and its effects.

The PRESS has decided to "remain mute"....to keep
their allegiance with the government untainted. to offer
happy talk on their airings so the viewers won't think there
is a problem coming to head.

My guess the only paper able to discuss this is the
San Francisco Bay Guardian...but so far nothing.

Maybe they don't know either.

bill conduit
etc.

4927. REQ: Testers for Scanner Software

Newsgroup: rec.radio.scanner
Date: 1997-08-24 00:00:00 UTC

Beta Testers for a scanner software product is needed for the
following
scanners:

AR3000/AR3000A
AR2700
Kenwood

You must have:

1) Basic to Advanced electronics understanding
2) Ability to communicate clearly on technical issues
3) IBM PC 486DX or better
4) Willing/Ability to design, construct, test any interface(s) need
for PC to scanner
connection.
5) Ability to provide written reports on a timely basis.
6) Posses one of the above listed scanner(s).
7) An additional scanner, in addition to the above scanner with a
DISCRIMINATOR output connection, or be willing to modify a scanner,
other than
the ones listed above, to have a DISCRIMINATOR output.
8) A working Data Interface for PD, POCDEC, POC32, Mobitex, etc..
9) Working & Monitorable Motorola 800MHz trunking radio systems in
your area
10) Understanding of trunking systems and how they function.

If you think you can meet the above qualifications, please email your
request
and background information to: wpascanrec@geocities.com

Thank You.

4928. Cellular Assignment

Newsgroup: rec.radio.scanner
Date: 1997-08-24 00:00:00 UTC
From: Clark Rennie <cerennie@gte.net>
Message-ID: <5tqd7a$849$1@gte2.gte.net>
Source record: 187855

Question to all,

I have a question about the present assignment of cellular frequencies. Back in the first days of cellular, there was only two competing cellular systems in each metropolitan area.

The "A" system (non-wireline) operated by companies not in the regular telephone business and the "B" system operated by companies that are the telephone business.

Now there is a large proliferation of companies in the same major city. Is the present separation of frequencie still followed? If not does anybody know the present assignment?

Thanks, Clark

4929. NCHP Channel Plan Needed

Newsgroup: rec.radio.scanner
Date: 1997-08-24 00:00:00 UTC
From: joncl@ibm.net
Message-ID: <3400c38f.0@news1.ibm.net>

Source record: 187860

Hi,

I just started thinking about getting a scanner and "listening in". I
mainly want to listen to aircraft (commercial and military) and
police/fire/rescue. I know most inexpensive ones don't carry the
military aircraft freq., but I'd like to get a decent scanner under
$200. I've read on here that RS has better coverage than bearcat, is
that true? The bearcat homepage doesn't show which frequencies their
scanners cover. Are Bearcat and RS scanners comparable in quality?
I can't afford the $400+ scanners that catch everything under the sun,
but what am I missing by not having one of those as opposed to a middle
of the road scanner?
What kinds of things should I look for when buying so I don't get
something I don't want or can't use?

I really appreciate any insight you all could give me. I'm really
looking forward to joining your hobby!

Thanks!

Joe Kralicky

I'm interested in buying a used radio scanner. I prefer that the scanner be in perfect working condition and be in perfect cosmetic condition. I'm most interested in a base (home) scanner or a handheld scanner, but all scanners consittered. I would like the scanner to cover from at least 5 to 900 megahertz. Interested in buying at the lowest price possiable. Let me know what scanner you have for sale that fits these qulaifications and what price your selling it at.

I agree with you 100%.It's not only this group but most of the
others.It's amazing that some of their questions can be answered in 5
minutes if they took the time to do a search, or go to tech support
pages or even just read a faq once in a while.

Randy:

The vfo is performing as a vfo, it just has a very high tuning step ratio. Also, since the
rig was probably derrived into a vfo-tuned mode from basic scanner, and not vice-versa,
this behaviour is probably normal. Your rig is just cutting out of one frequence in order
to "phase lock" onto the next frequency in the tuning step. Since this is a scanner which
can phase lock very fast, the problem may be with some of the software keeping up with
the hardware, etc. Basically, your rig is letting you do a manual search via tuning knob,
rather than setting limits and pressing a button. This is probably just the way it's going
to behave...

I doubt that there is any easy fix.

Mark

Me thinks you presume to much. I needed working freq. for the Las Alamos area in NM. There are ALOT listed that don;t get used for various reasons. I posted a request for working, main ferq's and a nice person sent them to me. Now granted, I COULD HAVE put all the freq.'s into my scanner, but the other person was able to send me the ones I really needed. Lazy- no. Convinent-yes.

try a pair of ear bud type head phones..combine these with ear muffs and
you will have an inexpensive solution...otherwise you may spend up to $200
for a pair of David Clarks..Aviation headsets.

Are you referring to 1600kHz as in the upper part of the commercial AM band?

I'm afraid that these frequency ranges are programmed into the CPU. If you want it to cover that range then you would have to invent and create your own CPU and then replace it with the one in your unit right now. Very unrealistic!

I would not imagine that it would perform well at such a low frequency. Wouldn't a short-wave radio be more appropriate?

Hell, there are even some new scanners that cover everything under the sun! Why not get one of those?

Yeah, I'm the same guy that's buying the HTX-202 off you. To reset the radio, press 2, 9, and LOCKOUT at power up. You will now have test freqs loaded in memory, and you may be able to even program some out of band freqs trhough this mode (like the PRO-51). You still haven't got my money order? E-mail me.

It is very common for receiver sensitivity to vary widely from one to another. But the problem could also be as simple as one having a better antenna than the other. To be fair, make the comparison using the same signals and the same antenna. I have done that with my BC800XLT and PRO-46 and they compare very favorably. Fixed transmitters (like police or fire dispatchers, the NOAA weather broadcasts, etc.) should be used to get the best comparison.

You are hearing "images" not listenning to the actual frequencies. The ban is on scaning the actual frewuncy range directly.

Given the bills HR 2369 and HR 1964, it looks like a judge friend was right. His opinion, based on what he saw in divorce court, was that Americans were so immature that we would get law after law until a critical mass was reached. At that point (and it is looking to be the year 2006) we will be a "police state". It is not being done by anyone's plan rather just that Americans are not willing to grow up.

4979. Now HERE'S a Relic! Sonar "VHF Sentry" FR-103S

Newsgroup: rec.radio.scanner
Date: 1997-08-25 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970825023601.WAA18226@ladder02.news.aol.com>
Source record: 187867

While visiting my parents recently, I was asked to clean my "junk" out of their basement. I came across my old Sonar "VHF Sentry" FR-103S. Anyone else have one of these? It's a bit larger than a regular pocket radio. Receives standard AM broadcast band plus two crystal-controlled VHF channels that you select. Runs on a 9-volt transistor battery. I bought this at a garage sale back in 1975 for a few bucks; I'm guessing it to be of late 50s or early 60s vintage. Couldn't be much earlier than that since the AM tuner goes to "16" and it can't be much later because it has the Conelrad "triangles" at 640 and 1240. Amazingly enough, the two VHF crystals are still active, local police frequencies. Seems to work well!

How much is something like this worth?

-Drew in Sunny Central Florida-

>as the board requires alignment once installed.

Terry used to live here in Melbourne FL before moving to Mass. He
installed the board in three of my scanners. They work flawlessly, but
the installation should be done by him. He adjusts the cutoff after connecting
the circuit so you don't get clipped receptions or hang too long on a
reception. Watched him do it; pretty delicate. Send them your scanner is
my opinion.

The question is NOT "where is it allowed" but rather "where is it denied".

The United States, in theory at least, is a country of FREEDOMS, with our legislative documents spelling out specific powers of government and denying other powers to government. Scrambling can be considered under the 1st and 5th Amendments, possibly the 4th as well.

If you are not in the United States, you may have similar documents. Guard and protect them, for ours are being trodden upon with increasing frequency, much to the delight of some.

Just bought an ICOM IC-R10. I know it scans slow, I know you can't modify it for Cellular.

What don't I know? i.e.: other tricks, computer controlling software, etc.?

Thanks,
Bill Crocker

GD>Given the bills HR 2369 and HR 1964, it looks like a judge friend was
GD>right. His opinion, based on what he saw in divorce court, was that
GD>Americans were so immature that we would get law after law until a
GD>critical mass was reached. At that point (and it is looking to be
GD>the year 2006) we will be a "police state". It is not being done by
GD>anyone's plan rather just that Americans are not willing to grow up.

There is something to what you say, it seems that some people just don't want to be responsible for their actions.

On another note, the ARRL has spoken with Congressman Markey's staff, and apprently this bill has very little chance of making it out of the Republican controlled committee. However, the ARRL people have talked to his staff and the staff is receptive to modifying the bill to make it less restrictive. The intent of the bill is to make "telephone type" services such as cellular and PCS relatively private until the new digital technology is on line. The ARRL's specific objections are based around broad language in the bill that could restrict scanning amateur transcievers.

In related news. A bill introduced by U.S. Senator Russel Feingold (D-WI), S-608, would allow local authorities to enact and enforce ordinances aimed at stopping ILLEGAL CB activity. The bill is being co sponsored by Sen. Spencer Abraham (R-MI). The bill now has bipartisan support and may well pass. The ARRL was successful in getting language introduced that would exempt Amateur radio operators and would require the FCC to give technical assistance to local communities writing such laws.

>>

There's a program that uses the "hamcomm" 741 op-amp interface. Don't
remember the site that carries it, but do a net search on "mdtstuff";
the file is "mdtstuff.zip".

I built the hamcomm interface but still need to figure out MDT frequencies
in my area.

Question: Anybody have MDT frequencies for Rochester, NY?

Only tie both power wires together if power is continuously applied. The
BATTERY lead keeps the memory, and must have power all the time.

Cutting L1 should work with some date-codes.
Doesnt work with mine with date-code of 7a4

I guess make your own controller to work the
PLL2002 and switch the VCOs.

Afterall, all you need to do is bang a few bits into the
PLL2002 chip so that it works in the cell bands.

Does anybody have programming INFO or data sheet
for PLL2002?

If that information can be obtained, almost any CELL BLOCKED
scanner can unblocked.

Basically disconnect the control PCB, connect an PC interface to
the main board where the control PCB connected and program the
scanners electronics from your PC.

Give your lobotomized scanner a new brain.

(I wish somebody gives NW*** a lobotomy as well).

Just remember, the ARRL is out to protect amateurs and really couldn't
care less about scanner legislation as long as amateurs are exempt
(yes, I am an amateur, for more than 10 years). This is not a swipe
at the ARRL, but an observation that a modification to legislation that
satisfies the ARRL may not satisfy the rest of us. Keep writing your
congressmen.

Actually it is a mid-1970's vintage radio. I used to be a Sonar marine
dealer and sold many of them. The VHF front end was actually a
converter so you could pull the frequencies off of the crystal by
retuning the radio a little. Later versions had 3 crystal positions.

>
> I just picked up an old Regency Z-30. Anyone know how to program it?

If its programming is similar to the HX/MX series... if you want to
enter, say 155.370 MHz on channel 5, the sequence would be:

<manual> 1 5 5 . 3 7 0 <enter> 0 5 <manual>

For searching, say 462.000 to 464.975:

<search prog> 4 6 2 . 0 0 0 <enter> <lower> 4 6 4 . 9 7 5 <enter>
<upper>

While searching, if you find something you like and want it entered into
the regular scan in say channel 13, just hit <enter> 1 3

Hope this helps.

>
> I am looking for any info as far as operating instructions and specs on
> the regency XL2000

I have the service manual for this radio (specifically Model XLH252 - VHF-Hi, 25 watts, two channels w/CTCSS). Send me your snail-mail address and I'll send it off to you as soon as I make a Xerox for myself since I never know when the next time will come that I will need this (it was sent to me free by someone else on the internet, and as I have no use for this manual anymore, I'll keep the tradition glowing and pass it off for free --- too bad not enough people out there do that anymore).

In case you are wondering, this radio is programmable (no crystals) via a diode matrix, and can be tricky if you're not technically oriented. If that's the case, send the radio off with a copy of the service manual (hard to come by) to a radio shop and have them do it since it needs to be retuned when it's programmed.

I've noticed quite an improvement in the quality of RatShack's
salesdrones lately. Perhaps they've been taken off commission, and now
earn a steady wage instead - taking the pressure off of them to sell
sell sell and concentrate on actually serving the customer.

I dont know about anyone else, but my 2005 has really poor aircraft reception, I cant even receive the ATIS frequency from the airport which is less than 6 miles line of sight from me. I have a Realistic scanner years ago that I sold. It didn't do 800 mhz but it looked just like the 2005/6 scanners. I can't remember the model number but I wish I had it back, I was never interested in aircraft....until I started flying.

All police agencies in Monroe County use the same system.

Trunked repeater outputs

851.0625
851.2125
851.5125
851.6625
851.9625
852.1125
852.4125
852.5625
852.8625

Point-to-point control

928.48125
928.81875
928.90625
952.48125
952.91875
954.35000
954.75000
955.15000
957.95000
958.35000
958.75000
959.90625

AFAIK, repeater sites are at the Brockport water works on Lake Road, Greece Town Hall, Stony Point Road - Ogden, Monroe County Water Authority tanks in Penfield off Rte's 441/250, Cobbs Hill, Big Ridge Road/Manitou Road - Greece, and a few others I don't know off the top of my head.

Does anyone have the information on how to open cell freq's
using the optolink on this radio. Really eveyone is so worried
about hearing cell conversations. I think the airwaves our their
for us to listen to. If you take away those freq's then what is next??
Why is it then okay for us to listen to police state and other bands??
Anyone who uses a cell phone or cordless should be made that nothing is
safe useing wireless communication. To me it's like the radar and the
radar detector as long as there are radars there will be detectors.

send info to s10@willowtree.com
thanks

Sorry if this is a duplicate. My mail server choked on the first attempt.

I was able to figure my longitude and latitude from USGS survey maps I obtained
from the local drafting supply. Assuming you live in the U.S. you my also be able
to obtain maps from the state. I also find these maps useful for locating antennas.
Another source is the Geo_db CD from Percon Corporation.

The first handheld I bought did not cover the military air band. It was
only after the fact that I discovered that the Thunderbirds and Blue Angels
used those frequencies. Because I try to go to a couple airshows each
year, I broke down and traded for a higher priced scanner (PRO-26).
After my first trip to an airshow with the scanner, I have never regretted
it. Other then that, unless you live near a military base, there is not
much to listen to. Unfortunately for me, the nearest bases are at least
100 mi.

From: despammer@aol.com
Message-ID: <5ttdlu$4cs$1@kayrad.ziplink.net>
Source record: 187922

Suddenly, my bc200 XLT stopped working. The radio appears to scan properly, and the digital display shows the correct frequencies, but nothing emerges from the speaker. Reducing the squelch doesn't produce white noise, nor does it stop the scanning. Keying my 2 M FM HT near the radio does nothing as well.

Has anyone heard of this kind of problem with a 200?

If not, where does one send a 200 for service? Costs? Worth fixing?

Thanks
Chris

I have one and love it. I got the optional CTCSS tone board, which is a must in my book. The alpha-numeric tagging is also a great feature I can't do without. The only gripe I have with it is that it hears images from cellular phones in the 350-400 mhz mil airband range.

I'd say it's one of the best scanners currently offered on the market. Remember, you get what you pay for.

Happy scanning,

Jon

According to the new catalog, there is no HF transceivers planned for the coming year. However, when RS brought out the HTX-204, earlier this spring, nothing was mentioned in last years catalog, so that rumor could be true. Only time will tell. The HTX-404 HAS been discontinuted, so if you want to buy one, you'll have to hunt around. However, the price has dropped considerably since it has been discontinuted.

Nope, we're still on commission. Maybe your local stores finally got
some employees who are actually considerate and helpful. I work at RS
and I try to be as considerate and helpful as I can. Unfortunately,
I've seen some employees in my area that aren't and unless they improve,
they don't stay with the company long.

Customs was attempting to stop the importation of cell capable scanners well before this so-called recall. As for possesion if you already have one--what's that supposed to mean? Are you saying that your fear the feds will break down your door some dark and stormy night and take your scanner away? Things may be gloomy for scanner enthusiasts, but I wouldn't go so far to say they've reached that point!

5047. AOR 3000A

Newsgroup: rec.radio.scanner
Date: 1997-08-26 00:00:00 UTC
From: "Dav ." <david084@flash.net>
Message-ID: <3402791D.D89@flash.net>
Source record: 187935

What gives? My AOR 3000A, a very expensive scanner, makes a rather disturbing sound each time someone unkeys the microphone. For instance, if you are listening to the police, when the policeman lets go of his mic button, you will hear a loud static sound before the scanner continues to scan more frequencies.
The seller told me that this is normal for AOR 3000A's, but I have many Radio Shack scanners and none of them come close in price to the over $1000.00 dollar 3000A, and none of them make this awful noise!

Is there a fix? Can anything be done to stop this problem?

I had the exact same problem with one of my 200s a few years back. I
sent it to Bearcat, and they fixed it and gave me a new battery pack for
around 40 or 50 dollars. A new replacement battery pack alone costs
about that much.

That must be very boring :-(I use my scanner to listen to OTHER people's phones, and am not afraid to admit it. I guess you don't really need my list of cordless frequencies since you only listen to YOUR phone. You should have the frequencies of your phone by now.

If you ever decide to listen to other people's cordless phones, let us know and we will give you the complete list at that time.

> >as well.

The Communications Act of 1934 is NOT a constitutional amendment,
Congress can't violate a law they enacted themselves, any legislation
enacted as a result of Congressional action simply supercedes any
existing law enacted previously. It is strictly up to the courts to
determine if HR2369 is unconstitutional. The constitution doesn't address
the issue directly and the trend in jurisprudence these days is to take a
rather narrow interpretation of constitutional provisions. In the case of
HR2369, the courts would probably take a middle ground in that the
provisions of HR2369 were constitutional in terms of the right of
Congress to regulate the manufacture, sale, and importation of receiving
devices covered under the terms of HR2369 as being a part of the
Congress's right to regulate trade. But the courts would probably draw
the line at the "right to listen" threshold. So if you built your own
receiving device or modified an existing one to listen to frequencies
where HR2369 intended to enjoin the manu- facture, sale, or importation
of commercially available devices capable of intercepting such
frequencies, the courts would probably deem that you were in your rights
to do so as long as any 3rd party rights covered under existing
legislation were respected.

From the FAQ article REPAIR TIPS: BEARCAT SCANNER RADIOS:

[...]

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there
is no audio and the green backlight no longer functions, a
tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201
(2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC
to several stages of the BC200XLT. Its main purpose is to
switch off power hungry stages of the BC200XLT when the CPU
thinks the NiCd voltage has fallen below a threshhold.
That's an attempt to limit the current drain on weak NiCds
to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board,
adjacent to the black multi-pin connector which mates the
Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily,
by something in the scanner drawing too much current
through it. In one case, capacitor C36 shorted. It's a 220
uF 10v electrolytic, located on the component side of the
main board, connected from pin 8 of the audio IC (IC2
NJM386SL) to ground. Capacitor C55 shorted in another
BC200XLT. In a pinch you bypass Q201 by soldering a short
piece of bare wire between the collector and emitter, but
you must first fix the component which caused Q201 to fail.

>else sell this type of amp?

Unless you use your handheld with an external antenna on a long run of cable
ie. lotsa loss, IMHO there's no benifit to adding an amp. In the forementioned
case, install amp at base of atenna before the run of cable. Of course you will
have to deal with the intermod problem mentioned in Mike's post.

Hello people,

Does anybody love a challenge on this group.

How about building an interface for all the "LOBOTOMIZED"
scanners out there that have the PLL2002 chip.

This is the plan:-
1. FIND/Get a data sheet/programming information for for PLL2002 chip.
2. Post that datasheet/programming information.
3. I will build an interface and write the software
to control almost any LOBOTOMIZED 800MHZ scanner
from your computer with complete 800MHZ coverage.
(I am a computer hardware/software engineer)
4. I Will post that information/software and plans free for everyone
to download and use.

This will mean that you can convert almosy any scanner into
a computer controlled billion memory , trunck tracker, cell tracker
etc etc.

So any ideas as to where we can find the data-sheet or programming
information for the PLL chip PLL2002 !?!

People, get of your damn assess and do someyhing to fight this
menace trying to LOBOTOMIZE your scanners BEFORE they decide
to LOBOTOMIZE your BRAIN .
(because you guys are really TOO smart for them)

Sending me SPAM or Junk-Mail means that you have legally agreed to
pay me US $500 for each SPAM or Junk-Mail message you send to me.

Think about it for a moment, Don. What is the lower sideband of an AM signal? It is identical to the upper sideband, but inverted 180 degrees.

Now, tune this like a SSB signal, tuning to the lower side of the signal, and the signal is understandable - although possibly not perfectly clear.

Now, if the signal was FM, then this probably would not work.

Message-ID: <01bcb283$c0e31a20$453774cf@default>
Source record: 187952

from Universal Radio M-400 manual:

Open your scanner and look for the detector IC. Regardless of the brand of scanner, the detector IC will probably labeled with one of the following numbers:
Detector Output pin number
3357 9
3359 10
3361 9
3362 13
3363 16

(if you don't know how to determine which pin is which on an IC, then you probably should not perform this mod yourself)

I have made this mod on a few of my Uniden scanners and it is quite easy. The Icom R-7100 was another story!
Drill a hole in the rear cabinet and install a 1/8 phone jack (open circuit only). Connect the discriminator output to the tip and the chassis ground to the stem (connection already made if radio has steel cabinet).

You can buy lower-end HF radios that will blow the doors off the reception of any HF/VHF/UHF scanner/receiver AND are much cheaper. The radios you mention below will run you about $500 but can be outperformed by a sub-$300 Sangean, Grundig or Sony.

> Then I started comparing prices with those of scanners that
> offer more functionalty. the result? very close indeed.

More functionality yes. But oriented mainly toward VHF/UHF listening. If your basic goal is HF, then I would stick to a dedicated HF rig. If you can sacrifice some HF sensitivity and selectivity for VHF/UHF capabilities then you seem to be on the right track.

> I am new to this hubby and would like to here some sensible advice on my choice

Think that should be the Alinco DJ-X10 or iCOM IC-R10. Both should be on your list.

> 3) Any others.

Sounds like you want a Rosetta Labs WiNRADiO PC Card which goes in an ISA slot. Not sure, but you should also check into iCOM's new IC-PCR1000 which connects to your PC via a "black box" connected to your serial port.

> Questions
> 1) I need a web address of reviewed scanner articles.

Check out my radio page below. Follow the Radio Monitoring link
and poke around a bit and see if anything interests you.

> 2) Is a difference between UK and US scanners of same make, as some
> scanners here are advertised as UK models.

US models will have cell bands blocked. Don't know if UK models
will have continuous coverage or not. Since the frequency bandplans
are different, the receive modes and step sizes for various
frequencies will be pre-programmed. So trying to use a UK scanner
in the US or vice versa can be frustrating. Some radios allow you
to reprogram the bandplan however.

Good luck!

>have no receipt and I don't even know where it was puchased.

Most likely you have a defective cell in the battery pack.
The pack contains 5 cells to give the required 6 volts. If one becomes
defective the pack will only deliver 4.8 volts on which the
scanner will run happily except for the low-batt indicator being
constantly on.

To fix the problem you can open up the pack and locate the defective
cell using a multimeter. If you replace the defective cell all
should be fine.

I don't have a trunk tracker, but I am curious none the less, since I plan to get one by the end of the year. In fact, I am just waiting for the 785XLT to be released. Anyway, my question is this. If have a list of talk groups or subfleets, can you enter just those talk groups? Or do you have to do the search thing every time?

I am considering purchasing a BC60XLT-1 scanner.
Does anyone know if there are any modes which can be done to this
unit?

Anyone have any pros or cons to share?

Thanks in advance for the reply.

Source record: 187965

Most frequencies you receive have a "tone" in the background which is transmitted along with the conversation which you don't hear. This allows two-way radios to be setup so they only receive signals from units which transmit the same tone.

An example is my local fire department.
They transmit on 154.31 and their tone is 131.8
There is another fire department about 20 miles away that transmits on the same frequency (154.31) but use 107.2 as their tone.

Without each department having their tones each fire department would hear the other talking. This can be distracting and confusing (each one has an engine 1 and ladder 3 for instance).

Using a "tone" allows the departments to hear only their own units. If I was to program a scanner for 154.31 and tone 131.8 I would only hear my local fire department. This makes it easy to listen since I know if someone is talking it is my department and not the 20 miles away. This comes in real handy when I want to leave my scanner on all the time and not have to pay close attention to which city is talking.

200 channel PRO-51 scanner for sale. Includes original manual and box
and A/C adapter. Bought about a year and a half ago, works great, looks
brand new, probably been used less than 100 hours. I can also include
the frequency book ('96 edition) for Alabama, Arkansas, Louisiana,
Mississippi, Oklahoma, Tennessee, and Texas if you'd like.

First $85 gets it.

thanks

Message-ID: <5u2alo$cvj@bgtnsc03.worldnet.att.net>
Source record: 187974

Something caught my ear about a news report and I headed to the room where the radio was on but I only heard part of what was said on WABC-AM in NYC, but 3 or 4 people were arrested in NYC for releasing information they had intercepted from pagers used by the Mayor, and other high ranking officals in NYC to news agencies.

Want to bet they blame it on "scanners"? Of course a radio of some sort is needed but one can have a pager cloned if they have a friend who works for a pager company ;-)

Better scoff up all the pager software on the NET while U can, before the sources are shut down. Anyone want to list the best interceptors?

I hear the K&L is the best out there.

:: > into, to use for extended periods of time in case of an electrical
:: > outage?

I connected a couple of wires (lamp cord works well) to the battery &
spliced them to a cord that had a plug that matched the dc jack on the
scanner (2006). Make sure you keep the polarity correct. My 2006
runs about 4 weeks , 6 hours per day, on a Delco deep cycle marine
battery. For hand helds, I use alkalines in my Radio Shack scanner;
they just replace nicads in the battery holder & last 20 or so hours.
For my Uniden hand held, I found a battery holder designed for
alkalines; it also runs about 20 hours per set of batteries.

Message-ID: <3404E23F.166A@nospam.com>
Source record: 187981

The TDRS space to ground link is on ku-band. There is a narrow beam from the satellites focused on the ground station near White Sands, New Mexico. You will need to move there to receive the signal.

If you decide not to move there you should at least go and visit the area. Its a neat
place. The ground station itself is a restricted facility but the Organ mountains and the
White Sands National Monument are nearby. To the south is Las Cruces, New Mexico.
Be sure to drop by the La Posta restaurant in Masilla. Tell them I sent you.

Its a whole lot easier to receive NASA audio and video on C-band from the
commercial satellite using a back yard TVRO satellite dish.

Good luck.

What do you mean, "unknowingly" ???

Netscape reads that html code and lets you see the fancy graphics and
pictures
that go with the text in the post. Its great. You don't know what your
missing.
You should ge rid of that Free Agent. It sounds old and out dated. Move
up
to something cool.

If Scott already has Netscape what does it matter that Free Agent is
free??
Why would he want Free Agent if it can't read html??
Am I the only one wondering these things???

Well, they were selling a 50 watt 2m mobile for around $260 at Dayton,
the 2m and 70cm handhelds were in the $289 range when they first came
out. The 70cm rig is now $159 as a closeout. Doesn't seem to out of line
to me. Is someone selling a less expensive 2m mobile?

You're blowing smoke. You obviously don't know what you're talking about
so, you resort to this "opinion" rather than supporting your positions with
facts. Sometimes it is better to keep your mouth shut and let people think
you are a fool than to open you mouth and confirm it. >By the way some sap
as some of you may call him is excited to be
>recieving his new gem! SOLD.
>Ron Monfeli

Well, he is a sap for buying a used scanner at an inflated price, mainly
because he wants to snoop on cell phone calls.

For those of you with access, today's Newsday has a followup story. The technology they employed was pretty sophisticated and obviously beyond the capabilities of many scanner enthusiasts for whom this is a HOBBY. That's the point that repeatedly needs to be made. You can outlaw anything you want; the vast majority of people, law-abiding and respectful, will comply; the bad guys will ignore the laws, obtain the technology outside the country or pay big bucks to pirate it here, and keep on listening.

Someone correct me if I am wrong but if I remember right the hospital and medivac have 2 separate freqs. Set up both freqs close to each other on your scanner and turn off your delay. This way you should be able to hear most of the info.

> receiving frequencies above 30 Mhz have been restricted for years. The

In the UK there has never been any restrictions on the frequency coverage allowed on scanners with regard to Consumer Sales.

The same has applied to other Countries such as The Netherlands.

In the past Germany and France have had restrictive legislation with only the Amateur and Broadcast frequencies being legal. The situation in Germany has changed completely now although the situation in some other European Countries seems rather "grey" at the best of times as to whether they are allowed or not. The open movement of goods between European Member (EC) Countries makes it rather hard to enforce restrictions.

Outside EC Member countries legislation appears to vary and whilst specific legislation with regard to frequency coverage may be rather hard to track down you can usually assume you would have a hard time explaining yourself should the need arise.

It is easier to pull teeth without pain killer than to get
a law especially any law that deserves disrespect and ridicule
to be repealed. Of all the laws that are passed, how many
are passed to repeal an old statute ? Very few or nil. But
there are many that come out to enhance the regulation and
penalty part. That's what Markey & Co. is attempting to do
with HR1964 and HR2369. They are trying to put teeth in the
enforcement part. They are mandating that the FCC go out
and investigate those to viollate the law by listening in
instead of the current status quo where the DoJ don't even
wink at EPCA violations as ammended.

Well, it looks like we may now have a court challenge to the Electronic Communications Privacy Act. I have not seen a better case. Is it unlawful

for the government to forbid you from receiving transmissions that are broadcast? Now, breaking encryption is another story. Digital moduation may encode but is not a cryptogram. It is a means to sending a message. Hopefully their lawyers understand what they have and do not push for a plea bargain.

If their lawyer are smart, they will fight this instead of plea bargaining. This may be the first case that we have had that can be used to determine if it is wiretapping to listen to that material which is broadcast. Now, encrypted material is different as it there were measures taken to insure privacy. That would be more like wiretapping and law enforcement does need a court order to break encryption.

Digital modulation is not encryption rather a different way to encode messages onto the airwaves. Even multiplexing is not encryption. If it is a means available to all, then it is not encryption.

Of course, this is my opinion. Even an attorney is only going to give an opinion, based on his judgement, education and experience. On a judge can give a ruling and then it must be upheld by higher courts. Then you start to have law (just because the law is passed, does not mean that courts will honor it).

I have been treated in the same polite manner
being given a catalog (upon asking) after mak-
ing a purchase.

I think the reason they have/show a price on
the catalog, is to prevent those who wanted
a catalog who had no intention of making a
purchase.

That's one way of looking at it. The other way is: If you send a message
via a radio transmitter with wide coverage, lots of people can pick it up.
If you want it to be private, it had better be encrypted.

I don't condone the actions of the people who intercepted and resold
the information. But I think the people using pagers to send unencrypted
confidential information were also pretty stupid.

:knows of.

There are heaps and heaps of frequencies.

There is 1 Hz and there is 2 Hz and there is 444Khz and there is 1.2Mhz
and there is, well, you get the idea.

Barry

I'm certain this will be a "test case" because private information was
intercepted, and reused, for a news service. I always assumed it would
be legal to intercept, but illegal to divulge the contents of the
messages.

It doesn't appear the prosecutor has a "clear" definition about that
law.

5131. BNN Apparatus Imagery False?

Newsgroup: rec.radio.scanner
Date: 1997-08-28 00:00:00 UTC
From: Dpinero@pobox.com
Message-ID: <340ce641.179852644@nntp.ix.netcom.com>
Source record: 187779

The Breaking News Network service, currently under scrutiny for intercepting live (private) pager information has posted it's own refute to these charges on the internet this afternoon at:

http://breakingnews.com/press.htm

I have not drawn a conclusion yet in favor of or against BNN. I happen to be a pro-information dissemination activist (see tagline), but I do not advocate broadcasting information that is not intended to, or rather, is specifically not meant to be absorbed by the public.

However, I am concerned about the first statement BNN makes against authorities. That is that a single BNN pager was presented to the press surrounded by equipment that did not belong to BNN. If this is true, this is sheer propaganda. I applaud authorities for doing their job. However, if they have a case to make, I wish they'd just make it. Don't sell it. It is very difficult to trust law enforcement charges when false imagery is used to promote the merits of a case. It is unnecessary and damages an already degraded trust in authority.

That's how I feel...I don't know if anyone feels differently.

I canot believe how many "radio" people here just don't get it.

You all know, since the Communications act of 1934, that you cannot
repeat what you hear, right? Especially making a profit at
it.......ECPA has nothing to do with it.

Thanks to boobs like this, we'll be lucky to hear ANYTHING on a
scanner legally in the near future....

Violation of ECPA is the least of their problems. Even before ECPA it
has ALWAYS been illegal to disseminate what you "hear" on the airways,
and what makes this worse is that they were making a profit from this
dissemination.

This is yet another slap in the face for scanning, and couldn't come
at a worse time in history for this hobby.

I can't wait to hear their defense on this one.......

BNN is reporting via its own website that the government portrayed a BNN pager surrounded by apparatus that did not belong to them. Now I don't know if authorities are being too zealous in making their case or what. If this is true, God only knows what else authorities are making up about this case.

5139. Need info - BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1997-08-28 00:00:00 UTC
From: Mark Fitzgerald <markf@genesis.campnet.nb.ca>
Message-ID: <34060D08.7CDB@genesis.campnet.nb.ca>
Source record: 187787

Hi All,

Okay, I'm thinking about buying a new BC9000XLT. It's been out for awhile now. I figure someone out there, knows the mods and etc. I've been looking for these mods, but can't seem to find them.
Uniden says, the Cell-band cannot be restored. Well, I'm not so sure this is true. On the 2meter ham bands, I heard someone say "The bc9000xlt, can be modified for the cell-band, and no gaps in freq. It will go all the way up to 1300Mhz .. I also got the ctcss unit for mine"
Well, I would appreciate some help in locating these mods, plus anything else one should know about this scanner. At the moment, I'm holding off my purchase, until I find out for sure, that this scanner can be modified for the cell bands ..etc.
While I'm waiting, I've looking around for the best deal on the scanner,ctcss unit and S/H. I would also like to hear from anyone, who has purchased this scanner and (installed - cost?) ctcss unit.

Thanks!

Mark

From: dmorga2@vms1.gmu.edu
Message-ID: <3405f799.1382150@129.174.1.8>
Source record: 187788

I am looking to get better reception on weak signals and posted the original question about signal preamps. Most replies I have recieved inform me that these preamps are of only modest value. Most have suggested that I would get better reception using a different antenna.

My question now is which antenna is best for my BC3000xlt. I am looking for improved reception in alll frequency ranges, but mostly in the aircraft band 120mhz -

Thanks for the info on Preamps!

Don

I seem to recall that the law prohibits "interception" of broadcasts.
Now, the "ordinary" meaning of "interception" has the "interceptor"
PREVENTING an intended recipient from receiving the broadcast (witness
the "Hail Mary" pass in a football game; go look up the definitions of
"broadcast"; the one that means roughly "shout from the rooftops"
applies here), but the "legal" definition of "intercept[ion]" includes
merely "receiving" (or hearing) a broadcast (or speech) not intended for
a particular receiver (e.g., you). That is exactly like prohibiting a
person who understands, say, French from "hearing" a conversation
between participants speaking French in a "non-French-speaking"
environment (e.g., "anywhere", USA). Our "eavesdropper" certainly does
not PREVENT any participant in the French conversation from hearing
("receiving") any "transmission" in French uttered by any other
participant in that conversation, but under the "legal" definition of
"intercept[ion]" can be deemed guilty of a CRIME.

> Now, breaking encryption is another story.

What is encryption, but another "foreign language"? You can't speak
"gibberish"? Your problem, not mine.

> Digital moduation
> may encode but is not a cryptogram. It is a means to sending a message.
> Hopefully their lawyers understand what they have and do not push for a
> plea bargain.

I'm not sure what lawyers in general are "for", but precious few seem to
be "for" principles...

This law will lead to censorship. The media will not be allowed to listen unless they get authorization.
So when the media slamms the police for abuse they could say sugar coat your story or we won't let you listen and we will arrest your news crews when they arrive.
this is bullshit.

5143. Trunker 3.3 problem - lostsig

Newsgroup: rec.radio.scanner

OK, ok, so we have a new licensed (say within the last 2 years by his KC7DIU callsign) ham operator coming on to a scanner NG trying to be a big man. Typical thing here for codeless techs trying to impress is for them to attack the higher licenses such as myself. Same with the others. Obviously, he is NEW the the internet & knows little as indicated by his AOL membership.

Obviously, he is just trying to make trouble.

He can't help it. He is a new ham with an entry level license, he is new to the internet trying to learn via AOL. He is, in essence a child, as also indicated by his behavior.

Sounds like KC7DIU just came in from REC.RADIO.CB, perhaps he will
grow some brains & stop trying to cause trouble with his new code-less
tech ham license.

Sounds like he received some poor elmering.

Votaste en la propuesta del grupo "es.rec.radio.scanners"? sali&#65533;
negativa (no hubo los suficientes votos a favor) y no se podr&#65533; proponer
de nuevo hasta dentro de 5 meses (hace 1 que fue la votaci&#65533;n). Para
estar al d&#65533;a sigue el grupo "es.news" por si repiten la propuesta y
quieres votar...

Como no soy de Madrid... :-((

Saludos

"What you do with the confidential information", as spelled out
in the law, to mean using it for personal gain, apparently only
applies to economic gain and not political gain. Unless of course the
information happens to be damaging to certain annointed custodians
of public trust, of the Democratic persuasion.

You're absolutely correct.

Since RS refuses to publish or even discuss selectivity
and sensitivity with anyone, per the salemen I've asked,
how does he know what they are to compare with Uniden?

Unless things have changed since I last (2 years ago)
read a RS catalog or newspaper advertisement, I have to
go along with the salemen -- I've never seen those two
qualities of a radio mentioned.

Legally?
Only the government can read people's mail.
Or pass laws that exempt themselves from the law.

This is about as invalid an argument as you're likely to ever find. I agree that the FAA should stay out of this, but your position is ridiculous. Why is radio different from any other medium, such as sound waves or wave guides? If I put an inductive tap on my neighbor's phone line without trespassing or touching anything can I then say "he should know that using phones is an insecure way to communicate?" Can I use a sound dish to eavesdrop on the guy talking across the street with the justification that the air is an open medium? There's no reason in the world why we have a right to listen to anything that's put over the airwaves, and anybody that wants to can encrypt such transmissions so that you can't. The reason we should be able to listen to police transmissions is because they're the police, not because they're using EM waves to communicate. We should be able to listen in on their phone calls, too, as far as I'm concerned. But as far as listening in to private cellular calls: there's absolutely to reasonable justification for being able to do so. I don't think the government should be outlawing recievers, but I do think that people should be able to use digitally encrypted phones without people like you giving some spurious babble about "your right" to hear what they have to say just because their transmission is electromagnetic.

Vacuum Tubes, new and used; variety;
Upwards of 100 tubes, give or take, lots of
TV sweep tubes (for linears!); special
purpose tubes like 6CW4, 7189, etc.
Entire lot, IF no questions/hassle, $60.00

(Price goes up to $85 if you want to
negotiate or insist on an itemized
list or ask questions that require
us to go hunting around. We just want
to get rid of this stockpile of tubes.)

Tube Testers; worked fine last I knew; two ea.
One is a military TV-7D/U w/tube manual
and a special fixture for testing
4CX250 and related metal ceramic
tubes. The other tester is an EMC 213-215.
Both testers for..... $45.00

Shipping extra. Calif addressees add 7.75% sales tax.

Call 619-530-2746 between 1:30pm-5:30pm, PDT; or fax anytime.
VISA/MC/M.O. okay. Checks require clearance time before shipment.

5164. Media Alert: Legislation Would Ban Receivers

Newsgroup: rec.radio.scanner
Date: 1997-08-29 00:00:00 UTC
From: larry@grove.net
Message-ID: <5u7emu$1ik@news3.his.com>
Source record: 187601

Press Release

LEGISLATION WOULD BAN RECEIVERS; OUTLAW MONITORING

WASHINGTON • Representative W. J. "Billy" Tauzin (R-LA), chairman of the House Commerce Subcommittee on Telecommunications has introduced a bill to outlaw listening to a variety of non-broadcast radio transmissions. Dubbed the Wireless Privacy Enhancement Act of 1997 (H.R. 2369 I.H.), the bill could prevent the manufacture of non-broadcast band, general coverage radios, and possibly make possession of existing radios prima faci• evidence of a crime. If enacted, U.S. restrictions on radio reception would become some of the most repressive in the world.

The bill makes the mere act of intercepting a radio communication illegal. Unlike present regulations, no attempt to divulge or publish the content of the communication is necessary.

The proposed law and another bill (H.R. 1964) sponsored by Representative Edward Markey (D-MA), also directs the Federal Communications Commission, which reviews all electronic devices sold in the U.S., to refuse certification of radios capable of receiving Commercial Mobile Radio Service frequencies. Such frequencies are interspersed throughout the radio spectrum, making it all but impossible for manufacturers to make certifiable equipment for unaffected frequencies.

Scanners are affected, along with amateur and shortwave radios equipped with general coverage receivers, business and police band radios, even some car radios. As written the law makes no provision for existing radio equipment. It remains unclear whether the millions of existing receivers would become illegal to possess or be "grandfathered" in.

Virtually everyone who owns a receiver is affected. Members of the press, businesses, hobbyists, and the public at large will be completely banned from listening. Amateur radio operators, the Military Affiliate Radio Service, the Civil Air Patrol, shortwave listeners and weather spotters may find themselves unable to modify or legally use their equipment. Police officers and fire fighters, who make up the vast majority of scanner owners, would no longer be able to monitor other agencies as they have in the past, and over time will be unable to purchase inexpensive receivers, even if they are authorized to possess them.

Critics charge that the Committee has been unduly influenced by contributions from the telecommunications industry, citing Federal Election Commission reports for 1995-96 which show that Tauzin and other committee members accepted a total of $467,000 from individuals and organizations who stand to benefit from this legislation.

The law has also sparked civil liberty concerns. In other countries, similar laws have set precedents that eventually led to bans or restrictions of broadcast receivers. Already, this bill would violate congressional assurances made in the precedent-setting Electronic Communications Privacy Act of 1986, that reception of public safety and private land mobile frequencies would never be prohibited.

House Bills 2369 and 1964 are currently in committee. Hearings on the bills will be scheduled after the committee returns from break September 2, 1997. Industry watchers believe that, barring public intervention, both bills have an excellent chance of passing. Concerned citizens are encouraged to contact their representative immediately and let them know how you feel about this legislation. While you are at it, let the committee members know, too. It may still be possible to stop the bill in committee.

For further comments regarding H.R. 2369 I. H. visit www.grove.net.

To help educate the radio hobby community on the issues surrounding the current anti-radio legislation before Congress, Grove Enterprises is releasing this material to hobbyists on the internet. This material can be given wide circulation on the net, to the media, and your congressperson.

You are authorized to reprint this material in total as long as the original source infomation is provided. Bob Grove's article is the cover story in the October Monitoring Times magazine. Additional background material can be found on the Grove web site at: http://www.grove.net.

The HR 1964/2369 Bills set out to protect cellular and paging communications, but is drafted in such a way that it damages an entire hobby if literally enforced. Bob Grove appeared as a witness for the hobby in front of the House Subcommittee on Telecommunications, Trade, and Consumer Protection at a hearing on cellphone interception on February 5, 1997.

HR2369: Another Specter Looms For Radio Hobbyists
An Editorial Feature by Bob Grove, Publisher, Monitoring Times

HR2369 is the broadest-sweeping anti-scanner Bill ever written in the name of privacy protection; if literally enforced it would virtually eliminate the scanner industry, and impact on the shortwave and satellite communities as well.
Even a generous interpretation forbids reception of frequencies used by NASCAR teams, removes police and fire communications in some communities, and affects agencies such as the Civil Air patrol-communications which the public uses on the job, in community volunteer work, for entertainment, and for education.
The penalty for any person who manufactures, modifies, imports, exports, or sells any device capable of receiving the prohibited frequencies also seems excessive-up to a $500,000 fine and five years in prison! Also, no provision is made in this new Bill for grandfathering in older receivers. Is this the end of hobbyists swapping out older scanners and general coverage receivers at a hamfest in order to upgrade to newer equipment?

A Little History
In 1986, the Cellular Telecommunications Industry Association (CTIA) successfully lobbied for legislation to prohibit the deliberate monitoring of mobile telephones. The resulting Electronic Communications Privacy Act (ECPA) did little to discourage curious scanner listeners from tuning in on cellular and other mobile telephones. At that time, the CTIA promised it

would soon offer digital encryption to provide privacy to its customers.
In 1993, again prompted by the CTIA, Congress directed the Federal Communications Commission (FCC) to deny certification to any scanner which received, or could be readily altered to receive, cellular telephone frequencies.
However, because of the number of cellular-capable scanners on the market, and the ready alteration of many new models which were already certified, scanner listeners still had an open line to phone calls. The long-promised encrypted communications were still not available except as an expensive add-on, paid for by the consumer.
On February 5th, 1997, hearings at the House Subcommittee on Telecommunications, Trade, and Consumer Protection convened, focussing on the continued vulnerability of cellular telephones to scanner eavesdropping. The hearings were prompted by the embarrassing disclosure that one of their own, Newt Gingrich, had been overheard on a cell phone conversation which implicated him in a strategy to evade a provision of the Ethics Committee. The conversation was overheard and recorded by a Florida couple using an unaltered Radio Shack PRO-51 scanner.
Rather than recognize the failure of the cellular industry to utilize readily-available voice encryption technology-eleven years after it as promised-the blame for the ease of interception was once again placed on scanner owners who were categorically characterized as "high-tech eavesdroppers." Representative Edward Markey (D-MA), the author of the 1993 amendments and the most animated and vocal of the Subcommittee members, promised we would "see scanner sales drop precipitously." He appears to be keeping his word by introducing HR1964 (see September 1997 MT).
It is clearly less expensive (though less effective) to try to get Congress to repeal the laws of physics than to implement encryption. This became apparent during the February hearing in which CTIA spokesman Tom Wheeler was invited to dominate the proceedings while other witnesses were denied the courtesy of reply or rebuttal.
During that hearing, a carefully-rehearsed demonstration between Wheeler and Subcommittee Chairman Billy Tauzin (R-LA) purported to show how easy it was to restore cellular coverage on a scanner-in this case, according to a Radio Shack official, a PRO-26. Curiously, this model has not been reported restored by anyone else and, although withdrawn from the market because of the hearing, remains FCC certified!

Legislation Looms over the Industry
On June 19th, Markey submitted to Congress HR1964, a Bill intended to provide sweeping changes to both Internet practices and scanner enforcement.
Much of the wording, including the substitution of "Commercial Mobile Radio Service" for "domestic cellular radio telecommunications service," in Markey's Bill appears to have come from a study by the Center for Democracy and Technology, released in June 1997, entitled

"Communications Privacy in the Digital Age."
Nearly every endorsing organization for this study is a lobby for the paging, cellular, or wireline telephone companies. Jerry Berman, head of the Center (which was formed in Dec 1994), was instrumental in drafting the ECPA of 1986. It is ironic that this organization, so principled in its fight for free access to information on the Internet, should have-in the name of privacy-so dramatically curtailed public access to the airwaves.
Fortunately for the scanner industry, HR1964 has not at this writing found any co sponsors, nor is it scheduled for a hearing.
However, on July 31, Tauzin introduced HR2369, a nightmarish proposal which not only includes all of Markey's scanner-related prohibitions, but even changes the provisions of the original 1934 Communications Act (see accompanying Bill text). The simple expedient of replacing the word "and" with the word "or" now criminalizes the mere act of overhearing a communication protected by the Bill, even though it's transmitted without encryption, rather than penalizing the illegal use of such communication.
If literally enforced, HR2369 will virtually eliminate the scanner industry, an estimated $200 million annual market; additionally, its ambiguous language impacts on the shortwave community as well since utility (nonbroadcast) communications occupy 78% of the frequencies below 30 MHz.

Accidental or Insidious?
Perhaps HR2369's authors simply don't understand their own Bill. We live in a technical era and few, if any, members of the Subcommittee are trained in telecommunications. Errors of commission, omission, and contradiction are rife in the Bill. Admittedly, Part A would seem to allow monitoring of public safety communications, but Parts B and C do not. If removal of public safety communications from Americans' radios is not an intent, as we are reassured by Tauzin's office, then why remove frequencies allocated to these services?
According to a Tauzin spokesperson, the Bill's intent is to ban any scanner capable of receiving mobile phone frequencies used by the Commercial Mobile Radio Service (CMRS). But, as seen in the accompanying sidebar, CMRS includes a great deal more than cellular phones and paging services. Of most concern are public safety systems, which are currently legal to monitor, and which share frequency spectrum with Specialized Mobile Radio Services (SMR).
SMR and Business Band systems are classified in the Commercial Mobile Radio Service because they both interface with wire communications which are protected. With passage of this bill the reception of police, fire, ambulances, local government, and NASCAR racing teams utilizing 800 MHz frequencies would become illegal; scanners receiving those frequencies would lose their type acceptance.
With the passage of HR2369, 83 percent of the 800 MHz public safety frequencies would be lost, drastically limiting the use of trunk tracking scanners. Would manufacturers find it worth their while to produce scanners-already a minor market-if they are forced to omit the

frequencies of greatest interest?
The impact on news media is also obvious; there is a well-established liaison between the media and public safety organizations for news gathering. With monitoring of these services outlawed, such leads could become non-existent. Citizen reports to police agencies, enabling apprehension of suspects described over the air, would cease, crippling this source of leads. Citizen watch teams and off-duty firefighters who monitor with low-cost scanners would be a thing of the past.
Additionally, the Bill appears to prohibit the monitoring of other services not intended for public reception, apparently including many satellite services. Would we lose C and Ku band downlinks, NASA shuttle audio, perhaps even weather satellite monitoring? Amateur radio would be severely restricted, since transceivers could no longer incorporate wide-coverage receiver sections, severely handicapping Military Affiliate Radio Service (MARS), Civil Air Patrol (CAP), and other auxiliary public service efforts during natural disasters, plane crashes, and public welfare and morale communications.
The Bill is perplexing. Was it written by someone so inept and inexperienced that it is almost totally unusable? Does the writer simply not understand the radio spectrum and its users? Is the broad sweep intentional, designed for negotiational room with its opponents? Is it merely written to placate the CTIA so that, if it fails, the Subcommittee members can still tell their special interests, "Well, we tried!"?
Or is it really an intentionally punitive legislation, inexpertly "designed by a committee," making their job easier by catering to their contributors and mandating the struggling FCC with its enforcement? This would be a characteristically simplistic, although unconscionable, solution to a complex technological problem.

Call to Action
We strongly believe in our citizens' right to privacy, but the onus of privacy protection is on the service provider, not the hapless hobbyist who could face and extended prison sentence and loss of his life savings after he overhears any one of an overwhelming number of clear voice transmissions.
Action on the Bill could come at any time-remember, the 1993 censoring of full frequency-coverage scanners was deliberately added on as an eleventh-hour amendment to another Bill in front of a weary Congress eager to adjourn. If we allow this type of underhanded, PAC funded manipulation to be repeated, we deserve to lose our traditional right of access to the airwaves.
Write, call, or e-mail your Congressional representative and voice your opposition to HR2369. We reprint a letter by Rachel Baughn as a sample; several other letters can be found at the KyScan web site http://www.uky.edu/~hpeach/congress/
Tell your local news media they are also being targeted. Agent Kallstrom, FBI Assistant Director, NY Division, claimed monitoring by the press forced the Federal Bureau of Investigation to abandon use of

cellular phones during the TWA 800 crash investigation. Laws already on the books prohibit such invasive listening.
This alleged incident and the improper publication of Gingrich's phone conversation should not be used as justification for broadening the scope of "illegal" frequencies. To do so damages legitimate uses of radio and removes the responsibility from those who should bear it: the communications services which owe it to their customers to provide encryption, and those who are violating existing laws regarding use of radio communications

Add me to the list, especially the monster squelch tail which even uniden repair coudn't remedy. They just returned the unit saying nothing was wrong. If this can be remedied to work as well as my GRE radios (2042,2035,2006,2037) I would be thrilled.

Thanks, Frank.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler, |
G/Wiz board for EDACS trunked scanning |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts

of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great

searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized

service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent

display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch

adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10

priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88

-108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker,

and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no

FR2516 10 X yes yes
FR2517 10 X yes yes
FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

5173. MultiMode 0.4.3 Release for Macintosh

Newsgroup: rec.radio.scanner
Date: 1997-08-29 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R2908972111570001@news.digex.net>
Source record: 187610
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.shortwave,rec.radio.scanner

Version 0.4.3 of MultiMode, the freeware digital modes decoder for the
Macintosh, is now available for download.

MultiMode supports the following modes:
Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
FAX
ACARS
WWVB Time Decode
DTMF
Audio Spectrum Display to aid in properly tuning in stations

Version 0.4.3 offers the following enhancements:

Support for DTMF decoding
Ability to save text and FAX pictures to disk
Modified filtering algorithms to improve performance on 680x0 systems
Calibration mode for adjusting software timing for proper FAX mode reception

MultiMode prefers PPC systems, although fast 680x0 systems should be able
to run many of the modes.

MultiMode may be downloaded from the following URL:

http://www.access.digex.net/~cps/sss14.html

I have one of these boards and used to receive teletext on Channel 6 in Indianapolis. They broadcast the data in the Vertical Blanking Interval. In the early stages they would post NASA news, local museum info, some school info. They advertised that you could receive attmail, weather alerts and download files. Remember this was pre commercialization of the WWW. The DOS SW came from Inter Office Communications Inc. in Indianapolis. Number is 317-684-6830. In my opinion, it is hardly worth the trouble plying with it for the purpose it was intended. If you are a programmer, you might find some other neat use for it if you could figure out the interface. Good luck

>technology.

I suppose your are implying there is some connection there. Like the part of my .sig that you did snip says, I don't speak for my employer. But since you brought it up, if you check out the Qualcomm homepage more closely, you will see that the technology Qualcomm is pushing is CDMA for Cellular and PCS. CDMA is a 1.25MHz wide spread spectrum digital signal that is also encrypted. There is no scanner in the world (besides buying a Basestation Transciever System and a Base Station Controller ;)) that will let you listen in on a phone call, so you might conclude that Qualcomm doesn't give a dam about scanners. I don't know, I never asked them. If anything, you would think that having scanners available that can monitor cell phone calls would help Qualcomm sell the idea of digital encrypted phones even more so.

Anyway, enough of the defensive stuff; I've continued reading the laws and proposed bills in question and have found some questionable things in it. I would have to now say that this is not a good bill.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated August 10, 1997

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recreation Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL Admission $5. Outdoor flea market on paved parking lot. Indoor reserved tables. VE testing 9 AM - noon, bring original license and photocopy. Talk in on 147.33 (+600 kHz), 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, WD9AYR, (630)759-7005.

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

Don:
Unfortuneatly you can't have your cake and eat it too. The single best
OMNI-DIRECTIONAL antenna for any segment of the radio spectrum will be one
that is cut (tuned) specifically for that freq range. A discone antenna is
a very reasonable tradeoff though. You sacrifice gain (discones are
zero-gain) but can monitor a very wide range of frequencies, typically
50-1300 mHz. The discone seems to be particulary good for airband
reception. You will get the best results by putting the discone up as high
as you possibly can (as with all antennas).
Good luck.

This business would have been illegal even BEFORE the Electronic
Communications Privacy Act. It has long been illegal to repeat or make
use of the content of any transmission, except for broadcasts and
hams. I believe that this law implemented an international convention
so it's pretty much a worldwide law.

Radio Shack's Pro-26 seems to be superior to anything new appearing in their recent catalog with regard to range of frequencies. Are these scanners ever coming back? I had heard that they went away to have some sort of a stupid modification performed to limit cell capabilities. Of course the RS employees that I spoke to are totally oblivious.

The Bearcat BC895XLT scanner is the base version of the BC235 handheld trunktracker. According to several postings on this newsgroup, it is due to be in dealers' hands early next month (September). As far as other trunktracker scanners, there was a posting earlier about one that may come out in December that will have alphanumeric ID'ing for the talk groups. I don't remember what the model number was on it.

>
Andy,
The RELM HS-200 handheld has both PL/CTCSS *and* DPL/DCS capability!
And... With 200 Ch. it makes it a pretty good package compared to some of the
`base' type units. (Yeah... I know that there are some that have more
`channels' but the only one that *I* have used for any length of time that
seemed to be `worth a damm' is the 100 Ch. BC760/950XLT since it works quite
well `base' or `mobile' and doesn't hog space either place and has enough volume
to overcome even the roar of a 100+HP John Deere farm tractor under full load.
[No bull! Even though they say that the cab is sound proofed I've found that
most scanners are just swallowed up by the noise. The BC760/950XLT is mounted
with a slide mount on the ceiling by the airconditioner controls, GMRS, and
AM/FM radio blasts right on through.]) Now... The HS-200 doesn't have quite
the audio amp that the BC760/950XLT has but, you don't expect a HH to have as
much since you'd have to carry 3 to 4 times the battery and defeat the
portability aspects. I use an earphone with mine when I either need `privacy'
or am in noisey surroundings. All in all I'm very pleased with it since now I
don't have to deal with calls for agencies that I'm not interested in and the
intermod `hell' that certain areas around here are. Yep! I love PL/CTCSS and
their digital cousins! (BTW, I also happen to have a pair of PRO2006s with
PL/CTCSS *and* DPL/DCS capability for my `base'! [*NOTICE* I said *`base'*!
They are way too big for mobile no matter what RS claimed when they offered the
mobile mounting bracket. {BSE GRIN!}])

Doleo ergo sum,

>reception.

Keep in mind that "zero gain" means that the discone has no gain advantage over a dipole tuned to the frequency being used. But both a discone and a dipole are likely to have a substantial advantage over any rubber duck antenna in the same position. Put the discone or dipole up high, and the advantage becomes greater.

If you just want air band reception, a simple 1/2 wave dipole or 1/4 wave ground plane antenna may be all you need. The discone's advantage is that it gives about the same performance over a huge frequency range.

Whilst I agree that a pre-amp is not capable of pulling signals out of nowhere I think they can be very useful when used to compensate for signal loss over a long piece of coax, or for amplifying weak signals at the aerial end of the coax away from local RFI generators such as PCs and other electronic gadgetry.

For example... at home (near Newmarket, Cambridgeshire, UK) I have a Super Scan 2 wideband vertical aerial on the roof with a built in pre-amp, then about 40 feet of coax leading down to my "toy room" where I use an AR8000 handheld scanner. With that aerial I can hear 14ish 2m and 70cm repeaters, compared with about 5 or 6 on the scanner's own aerial. I can also hear Shannon Volmet on about 5MHz sideband compared with just hiss normally. I can hear Stanstead Radar about 30(?) miles south compared with just hiss normally. If I turn the pre-amp off then signal strengths on the above drop usually by 4ish S points, though that may be because the aerial is not designed to work passively, I don't know.

Anyway, my point is that pre-amps can be useful with hand-held scanners when used appropriately.

> My question now is which antenna is best for my BC3000xlt. I am
> looking for improved reception in alll frequency ranges, but mostly in
> the aircraft band 120mhz -

I'd recommend the Super Scan 2 as a wideband receiving aerial but if you're only interested in Airband I'd be tempted to have a go at building your own dipole tuned specifically for that band.

Whatever you choose, if it isn't active now then you could add a masthead pre-amp later if you wanted to.

Cheers,

Mark.

I intend to buy a handheld scanner, and interested
in compter interfacing with the view of receiving
video(or TV)/speech/text.

Handheld choice is either ICOM R10 or AOR8000.
WHich is best for all round use in the UK?

I also want to here from people who have used either
of the above handhelds. Most especially their limitation
in terms of computer control.

ALso is there any handheld transcievers out there with
the same recieve capability as the above scanners?

Lastly also interested in PCMCIA type scanners that
plugs into a computer notebook PCMCIA slot. I just like
to be able to carry more functional things about without
size penalty.

Any Ideas ? Pls email me personnally.

There's nothing at all similar to the mail in this case.
As someone else has written, it is much more akin to
hearing someone else's conversation coming from a
neighbor's yard or someone walking down the street
in front of your house.

My Kenwood TS-690 covers the 46-49MHz cordless phone
frequencies quite well, yet there is a law that
sez if I tune my radio to a cordless frequency and
listen Ihen I am commiting a crme. What a joke.
The stupidity of it all is that millions of people
are lead to believe their cordless, cellular
and now pageing transmissions are secure when
they clearly aren't and, unless encrypted, will
never be so.

Having heard enough rumblings from the direction of the
Capital, I decided that we need a centralized discussion area
for any legal action we wish to take regarding scanning.

So, I created this list (and it's digested counterpart).

To subscribe to this list, send a message like this:
To: scan-legal-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-legal-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

Digests go out once a week, Monday mornings.

Tell your friends and spread the word!

Items open for discussion are things like how we can educate
our legislators and the media.

Well, I know they are not in the 1998 catalog as I mentioned in a thread I started previously. Personally, I think the Pro-43 just barely squeaks ahead of the Pro-26 although the latter has better frequency coverage, but that's my opinion. If I was in the market for a new scanner, the Pro-26 would have been in second place behind the AR-8000. I believe the "reason" why the Pro-26 has been discontinued is there have been claims that you can pick up cellphone images in the legal parts of the 800 and 900 MHz bands. With the current RS offerings now, I'm glad I got my pre-ban Pro-43. At least I can, upon modification, receive 54-88 MHz as well as listen to military UHF and 220 ham which it presently has. The new scanners I'm not really impressed. Yeah ,they have a truck-tracker this year which is a Bearcat 235 variant, but here in the Pittsburgh area, 800 MHz isn't used by too many emergency services. 800 MHz hasn't made much of an appearance here generally except for mundane things like businesses and maintenance of the Pittsburgh Public Schools.
Chuck, who thinks RS has slipped back.....

>Hopefully their lawyers understand what they have and do not push for a
>plea bargain.

This isn't the case against the ECPA that you may think it is. First, the folks who were listening were profiting by using the information to provide a service to news organizations. That's a no-no, even under the original version of Section 602 in the Communications Act of 1934 (the original "Radio Secrecy Act").

Breaking an encoded signal should not be the offense. If the prosecuting attorneys are stupid, they'll try to pin that on the defendants and then the fur will fly. What these folks did was monitor sensitive traffic, and then charge money for the information. Had they anonymously provided this information to news organizations for free, it might have been a totally different story.

I wish it really were like that. I'd pay to watch some Federal attorney try to justify prosecuting someone who was just listening.

Too bad this case isn't like that.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

5221. Media Alert: Anti-Radio House Bills Before Congress

Newsgroup: rec.radio.scanner
Date: 1997-08-29 00:00:00 UTC
From: larry@grove.net
Message-ID: <5u7enn$1ik@news3.his.com>
Source record: 187848

Grove Press Release

MEDIA ALERT!
NEWS REPORTERS COULD LOSE THEIR RIGHT TO MONITOR LOCAL GOVERNMENT,
POLICE, FIRE, AND AMBULANCE SERVICES

BRASSTOWN, NC—AUGUST 27, 1997— For any news reporter, each minute that passes between a newsworthy event and his awareness of it can make the difference between getting the picture or beating the competition. One of the tools used in the field is a scanning receiver. The scanning receiver alerts you to an outbreak of gunfire, a major fire, traffic collision, break-in any number of potential stories. Or a local scanner listener could call to alert the media of a breaking event.

A Bill currently in the House could make your scanner illegal. HR2369, submitted by Rep. W.J. "Billy" Tauzin, is presumably intended to ban any scanner capable of receiving cellular, paging, and other protected communications. However, it has been so worded that it prohibits both the reception of, and the equipment to receive, the Commercial Mobile Radio Service (CMRS).

CMRS includes a great deal more than cellular phones and paging services. Public safety agencies all around the country are also using these frequencies, due to overcrowding in the 3 MHz of radio spectrum which is allotted to public safety in the 800 MHz range. Chances are good that the majority of communities have communications which are legal to monitor which make use of the Commercial Mobile Radio Service.

Should this Bill pass, it will not only be illegal to manufacture, modify, import, sell or distribute any piece of equipment that can receive the CMRS frequencies, but it will be illegal to even listen.

Do you think the FCC will make an exception where the media is concerned? Absolutely not: the media is one of the scapegoats being blamed for the necessity to further protect cellular communications. Rep. Tauzin referred to testimony by FBI agent Kallstrom, Assistant Director, NY Division, which pointed to the press as the reason the Federal Bureau of Investigation was forced to abandon use of cellular phones during the TWA 800 crash investigation.

The FCC also went to some lengths to remind the press (following the publication of Gingrich's cellular phone conversation by the New York Times) that the press is not above the law when it comes to enforcement (see FCC Public Notice #86718).

While both the above examples are violations of existing law, they are not an excuse for further broadening the ban on listening to include police, fire, ambulances, local government, and NASCAR racing teams (which use business frequencies, also prohibited). They are an example of why increased pressure should be exerted on cellular phone providers to encrypt their communications.

A table giving the exact frequency ranges included in the Commercial Mobile Radio Service is attached. When Rep. Tauzin or other proponents of the Bill try to tell you they are not removing public safety or NASCAR frequencies, refer to this chart. Then you be the judge. Better yet, ask them to provide you with the frequencies that would be eliminated from all scanners if HR 1964/2369 is passed and becomes law.

Commercial Mobile Radio Service
1) Private Paging Services
Private carrier paging system (PCPS): 929-930 / 931-932 MHz

2) Business Radio Services
VHF low band: 30.76-31.24 (9 discrete freqs) /33.14-33.16 / 33.40 / 35.02-35.14 /35.18/ 35.7-35.72 / 35.88-35.98 / 42.96-43.00 MHz
VHF Hi-band: 151.625-151.955/154.570-154.600 MHz
UHF band: 457.525-457.600 / 460.650-462.1875 / 465.650-467.1875 / 462.750-462.925 / 467.750-467.925 / 463.200-465.000 / 468.200-470.000 MHz
There are also a number of chunks of the 470-512 MHz that will be removed.

3) Specialized Mobile Radio (SMR) Services
851-866 (806-821 MHz)/ 935-940 (896-901 MHz)
(home to many public safety agencies for whom there wasn't room in the 866-869 MHz portion)

4) Land Mobile Services in the 220-222 MHz region (recent regulations have turned this over to the CMRS)

5) Public Mobile Services
A) Paging and Radiotelephone Services
35.2-35.66 / 43.2-43.66 MHz / 152.030-152.240 / 152.480-152.840 MHz
154.625 / 157.740-158.100 / 158.460-159.700 MHz
B) Cellular Radiotelephone Service
869-894 MHz (824-849 MHz mobiles)
C) 454 MHz Air-Ground Radiotelephone Service
454-455 MHz (459-460 MHz mobiles)
D) 800 MHz Air-Ground Radiotelephone Service
894-896 MHz (849-851 MHz mobiles)

6) Offshore Radiotelephone Services

7) Satellite Mobile Services
137-138 MHz NVNG (148-150.050 uplinks) / 399.9-400.050 / 1525-1559 / 1610-1660.5 MHz

Hello,

I have found a pair of these radios (pagers). They are both set to 138.325 MHz which is a Air Force Base freq down in South Carolina. But here in PA, the freq isn't used. ANyway, can I somehow put the pager on a 2 meter repater? Can it go as high as 500 MHz? If anyone has any info or ideas, please e-mail me. Thanks in advance.

73's,

Yes it's an ergonomic little unit isn't it.

If you want to direct enter the freq.

Hit Direct. Then type in the freq. Then hit enter to make it active.
Then simultaneously hold the channel button and the enter key.

If you search and lock a freq then simply hit enter simultaneously
with the channel key you want to use.

A superior scanner for air band (built for it), but not for much else.

lose the stored frequencies.
Better to keep batteries in it and plug it in when you can.

I set up a discone ant. on a chimney mnt. on top of my house and have been getting some pretty heavy-duty electrical shocks from the end of the cable when thunder clouds come over. I have 100' of RG 8/U cable joined to 50', with one end of an extension cord wrapped around the connection, and the other end plugged into an outlet (the ground only). The RS salesman told me I wouldn't have to worry about lightning, but I could do this just to be safe. I want to be safe, now I am worried.
I have a Pro-2005 scanner, why doesn't it have a ground on the plug?
Since I have put up this ant. I haven't noticed a whole lot of difference.
Any suggestions?

Thank you

Ray

Keep in mind, on all multi-band antenna's any time you increase
proformance on the low band or add a low band the upper band will
decrease in performance. and visa-versa.
The same is true for mono-band antenna's also.
keep an eye on the upper bands as you make any low band chainges
to the antenna.

5235. HELP : Busted by Police UK

Newsgroup: rec.radio.scanner
Date: 1997-08-30 00:00:00 UTC
From: uk911@aol.com
Message-ID: <19970830130601.JAA10181@ladder01.news.aol.com>
Source record: 187628

Hi

This is the first time I've visited this group because I am in the UK but I was hoping that some of you may be able to help another hobbyist like myself. The Police recently attended my home address here in the UK and spotted two of my scanners, both were base base models (Yupiteru and Relaistic). I managed to reset them but they have now been seized by the Police so that they can be examined to see if they had any Police frequencies in them. Now that I reset them, can they detect what has been in the channels before and if for example in channel 26 I had 452.395 in it but replaced it with 169.3125 i.e. replacing the original frequency, can they tell what was in that channel before ?

I'd appreciate any help, preferably by direct email to UK911@aol.com The law is pretty crap over here and I was prosecuted for listening to the Police when I was 17 yrs old, before I knew the laws etc. Maybe you have had similar experiences, any help would be appreciated !!!

Many thanks

Chunky

Source record: 187630

I've been thinking about getting an AOR8000 and I notice that it is selling for around $400 at Multicomm2000, Nevada, Bandercom and a couple of other places; and for around $600 at Javiation, Durham (even higher than that) and some other places. I don't get it: Why do you suppose there such a wide divergence in price? For a long time the AOR800) was in the $600 or higher range and to suddenly be available for $400 makes me wary? I'm I missing something here other than the possibility that competition is forcing prices down?

>Other ppl need to learn how to use a search engine correctly and they can
>find
>out answers to their numerous redundant questions.

I've noticed that a lot of people will simply ask questions (here and other newsgroups) that they could easily find on their own. Either they are ignorant of how to go about searching for info or they are lazy. I almost never read posts any more that begin with "Does anybody know..." and "HELP!" and such things in the subject.
Go to www.altavista.com
>and
>type everything in between the brackets, but not the brackets themselves.
>[+pro-2035 +os535]

Using plus signs is good, but better still is to enclose the exact phrase that you are looking for in quotes: "otpo 0s535" and for further refinement, adding words with a plus sign before them: +pro2035, for example.

This postings highlights what I have been seeing in our culture. We are so over reacting to the seventies excessive freedom. Our very fabric of society is dirty, just looking at what is happening in government (it reflects the people). Within law enforcement, we are seeing what is called in the military "unlawful orders". Because of group think, you are told to perform functions that go against the body of law that makes up our civilized world. If this does not stop, we will return to a society where some are "more noble" than the rest.

By the way, Skippy, the correct phrasing is "should behave," not "should behavior." Just another example of your miniscule mind at work.

For the smart people watching the news, the equipment they showed was actually CELLULAR equipment.

We should all know by now that you don't need all that crap to get a silly pager capcode. There have been many posts in these news groups that help you to build a simple circuit that fits in a DB25 case.

I carry a BNN pager and non of that sensitive junk came over it at anytime as the authorities claimed. And as for the so-called cloned pagers, WHERE ARE THEY????

>list of abuses snipped<

ANY group, regardless of it's purpose, cannot help but end up with some people involved who may be criminals. I know a LOT of police officers, and the VAST majority of them are fine, upstanding individuals. Sure there are some who are criminals, but to call all of them criminals does a great disservice to the vast majority who are good human beings.

Well Lawrence I am assuming your 50ft of extension cord plugged into
your outlet is supposed to be some kind of a ground for the antenna?
Personally this is the first I have heard of this, maybe I am just not
used to this practice. Personally I use a standard ground wire and 10ft
copper ground pole driven into the ground for my ground. I am not really
sure why your getting the electric shocks, but something tells me that
you don't have things setup right. As for why the plug on your scanner
dosen't have a good ground on the plug, that is due to way electronics
are produced today. You will find that most of your home electronics are
w/o ground plugs.... Why, guess you'd have to call it cost cutting or
some other silly measure.

Good luck, and happy scanning.

>There is one possibility that you haven't considered, John. Perhaps the reason "KC7DIU" doesn't show up in the QRZ database is that the operator who originally held that callsign has changed his or her callsign to a "vanity" callsign. Therefore, it's quite possible that the information you retrieved from <http://www.ualr.edu/~hamradio/callsign.html> for KC7DIU is inaccurate, especially if the callsign was recently rescinded in favor of a vanity call. Also, I think you should be real careful about publishing people's names and addresses on the Net, John. Individuals have had their ISP accounts terminated for that type of activity.
In regards to your allegation that KC7DIU is just a new no-code tech operator who is trying to stir up trouble with the higher class license holders such as yourself, my observation is that the class of an amateur operator's license has little, if any, impact on their on-air behavior. Just last weekend I heard a group of general and advanced class operators on 7258.5 kHz LSB between 22:00 and 23:30 UTC jamming each other, using profanity, playing music on the air, etc., etc. I have yet to hear this sort of behavior on any of the local 2 meter repeaters, and my guess is that the type of crap I heard last weekend on 7258.5 LSB occurs on the HF bands a lot more often than most radio hobbyists realize. I really think you need to put a lid on your holier-than-thou superiority complex, John--just because a ham operator is a no-code tech doesn't mean that he or she is out to stir up trouble with higher class amateurs; and not all general, advanced, and extra class ham operators are without sin on the HF bands, either.

There is no such thing as too much freedom to listen and
learn about "whatever"

Unless the government is embarked on a course where the
listening will cause them to be "discovered"...

The major problem here is the PRESS.

I have not seen one tv editorial or newspaper story
condemning this fascist in public. Where is the representative
of the People's Voice. The PRESS.

Who owns the Press? Would appear the goverenment does.

The Press is silent. I guess they have more important
matters to report: Madonna's toilet ritual; M Jackson's hair
restoration procedures; Hillary's choice of "clothes that fit";
Chelsea's Need to Appear Thin or not at all on tv; stuff that makes
one glad to be reading a newspaper or tv story given approval by
ol' Clinton as "politically correct for the amerian people"....

we are beginning to "BOW" to those we elected.

King and Queen Hillary.

I guess that is why the government run by the Clinton's
relishes in the thought of letting all these illegals into
the country and allowing them to vote: they are illiterate.

Governments of the Hillary and Him clan love illiterates when
it comes to "decision time". I would think by now that an educated
electorate would have impeached HIM and HER by now.

the only thing worse then Him and Her is Jesse Helms.

I guess the introduced legislation is to prevent communists from overhearing what a democratic society used to be like. Too much freedom allows the government no fun.

Where are they going to put all the criminals when this law gets passed?

Is there not this Constitution against unreasonable searches and seizures in the Bill of Rights. Or will it be newly titled: Bill's Rights.

What is this jerk who is introducing it afraid of?

We'll never know. the Press has more important stories to write.

bill conduit
etc.

Hi Frank,

I find the squelch tail on my two BC9000XLTs noticeable but not too
annoying, though this is subjective. I actually measured
the length of the squelch tail on a BC220XLT and
was able to quantify it.

Without measuring the tail on my 9000s, I'd
say it appears somewhat longer than average (e.g., PRO-2006).

The BC9000XLT squelch circuitry is covered by US patents
and is quite complicated. I read the patents while preparing
my Monitoring Times column on innovative scanner patents.

Much of the squelch processing is performed inside the
main CPU. Uniden wanted the scanner to scan super fast and
the simpler squelch employed in other scanners (which is easy to
modify) wasn't suitable for ultra fast scanning and searching.

Happy monitoring!

I no longer have a PRO-62 with which to experiment, but try this.

One you are in Manual mode, listening to the frequency you want
to monitor, press the Program key. On some GRE models, the battery
save feature is disabled during programming.

Based on your earlier post wherein you "enlightened" the members of rec.radio.scanner as to the identity of KC7DIU, you seem convinced that I am David K. McDaniel of Salt Lake City, Utah. So what exactly is the point of your post, Mr. Mackey--if you know who I am, then why don't you shut the hell up or take your flaming sessions to rec.radio.scanner flame_fest or alt.radio.scanner flame_fest? Are you afraid that you won't have an audience in either one of those newsgroups, or are you just trying to uphold your reputation as a NG flamefester? I notice you haven't said anything about my comment regarding your previous posts in this newsgroup and rec.radio.cb--is there something you're trying to hide, John?

Don't bet on it. He's been flaming people in this newsgroup and
rec.radio.cb for quite some time now, as anyone can discover by looking up
his posts at <http://www.dejanews.com>. He's got a BIG superiority complex
because he holds a "higher class" amateur license and is therefore above
reproach for his activities on the Net, and probably his behavior on the
ham bands as well.
It wouldn't surprise me in the least if he is one of those jokers on 80
meters or 40 meters who jams other operator's transmissions, plays music on
the air, uses profanity, etc.--at least that's what I would expect from him
on air based on his behavior on the Net.

CTE makes a unique antenna that has a tuneable vertical element that can be used for 10 / 11 / 6 meter that is connected to a discone that has two tunable stubs also. the discone can be resonated for 2 meter and 440 or whatever you choose to tune it for. the discone will work wonders as a scanner antenna also. it won't handle gobs of power, but is pretty useful nonetheless. it should fill your needs pretty well. cost should be about 65 to 70 bucks. Sean aka Bigfoot

> retrieved from <http://www.ualr.edu/~hamradio/callsign.html> for KC7DIU is
> inaccurate, especially if the callsign was recently rescinded in favor of a
> vanity call.

No previous calls are shown. To confirm, I tried a test which shows what
you suggest is not the case. I went to BOTH QRZ & UALR and ran the
PREVIOUS call that a friend of mine had until he got his vanity call
about a year ago. His old call was "W0AXE", it came up with his name
and NEW CALL. It also stated that W0AXE was a previous call for him.
Also, since it shows that licnese is a tech class he could not have
gotten a vanity call because so far only Extra & Advanced have had
the opportunity.

> Also, I think you should be real careful about publishing
> people's names and addresses on the Net, John. Individuals have had their
> ISP accounts terminated for that type of activity.

I suppose that is something to consider, but I found the info on the net
in the first place so it was already on the net.

> In regards to your allegation that KC7DIU is just a new no-code tech
> operator who is trying to stir up trouble with the higher class license
> holders such as yourself, my observation is that the class of an amateur
> operator's license has little, if any, impact on their on-air behavior.

> on 7258.5 kHz LSB between 22:00 and 23:30 UTC jamming each other, using
> profanity, playing music on the air, etc., etc.

If is was late there is nothing wrong with swearing according to current
interpretation by the FCC. If they were all willful in what you
describe
then it was not jamming either (in the legal sense). This has been
proved
by the "I jam you-you jam me" net held weekly in LA where they all try
to
squash each other on the air. But playing music is not allowed no
matter
what.

> and my guess is
> that the type of crap I heard last weekend on 7258.5 LSB occurs on the HF

No, I give up!!!! You have contradicted yourself and told lies or half truths so many times in the last day or two there is now way ANYONE could make
any credible conclusions based on YOUR information.

Let's see first you said that you hold the license "KC7DIO" and make statements to point that you have NOTHING to with that callsing other than a screen name. See below:

From: kc7diu@aol.com (KC7DIU)
Newsgroups: rec.radio.scanner
Subject: Re: ERIC OYEN, DREW DURRIGAN, ETC.--READ THIS!!
Date: 30 Aug 1997 01:36:15 GMT

"In the future, I suggest that you do your research
BEFORE you post, John. Go to http://www.qrz.com and do a search on
"KC7DIU"--you will discover that it is NOT a valid amateur callsign
and
never has been--it just happens to be my AOL screen name."

Then you say you ARE the person holding the ham license KC7DIU & site info
on your driver's license as proof. See below:

KC7DIU wrote:
> Last time I looked at my driver's license,
> the first name on it was David and the middle initial was K. Ahhhhh . . .

You change your stories as often or more than the weather. Almost as often as Bill Cheek's stories about being an engineer.

> comment?

Don't feel bad about your ignorance, you simply don't know. Not
everyone
know everything, & you will learn the thing you don't know.

You are correct that ISP stands for Internet Service Provider. That is
interpreted as being able to directly access the internet. Other online
services such as AOL, Compuserve, etc ARE NOT an ISP. However, they do
provide interhet gateways as a function of their service.

To show you how to tell the difference between an ISP and a
seperate Online service, try using a regular internet mail program
to pull your mail from AOL, or try using a regular dialer to access
AOL like trumpet, shiva, or the Win95 dialer. Neither will work!!!

A regular internet mail program (designed to access a POP mail server)
will NOT work to pull your AOL mail. Trying to use a regular dialer
like
shiva, trumpet, or the Win95 dialer will not access AOL (AOL will not
respond if you ask them for your DNS address!!!) I don't believe
that a regular news program will work to pull news servers (NNTP) thru
AOL either.

In other words online services like AOL DO NOT follow internet
protocols,
they do their own thing.

> (not in the terms the voices in your head use, just in plain english please)

Your bullshit comments (like the voices thing) really isn't needed.

Hang around, mayve you can learn a few things (if you grow a brain
first)

They must be bootleggers then as the FCC has not allowed Tech & general
class
to get vanity calls yet. See below.

I pulled this from the FCC, the exact web page is:
http://www.fcc.gov/wtb/vnityfaq.html

>Q. When will General, Tech Plus, Technician and Novice operators become eligible to
>request a vanity call sign under the first-come-first-served provision?

operators who call our attention to discrepancies, is being >used to improve the system so
that it will function smoothly.

The only other possibility is that they received calls of deceased
relatives
as that was allowed, regardless of license class. If you want to prove
your
statements, post their calls. (basically, you don't know what the hell
you
are talking about)

> air. Besides, I thought amateur operators were supposed to be setting the
> example for how other radio operators, i.e. CB'ers, are supposed to behave

> on air.

Remember, I said the time made the difference. Certainly, between 2 & 5 PM is
not late enough. Much of the ham community was shocked when the FCC used
the time standard (which had always been reserved for commercial broadcast)
& applied it to amateur radio about a year ago. This was reported in
Amateur Radio Newsline.

As I said before, stick around, maybe you'll learn something.

5295. Police Codes Question

Newsgroup: rec.radio.scanner
Date: 1997-08-31 00:00:00 UTC
From: George Ann Hornor <gahornor@ix.netcom.com>
Message-ID: <3409CABA.267F@ix.netcom.com>
Source record: 187658

One of my hobbies is reading mysteries, and I have a question about a police code that appeared in a recent book. The patrol officer radioed HQ stating that she had located a 10-29, meaning a dead body. Here in Northern California, 10-29 is the code to check warrants, etc. My question is, are the codes that much different in New York?

I'm just curious. I've been forced by a broken hip to stay at home for the last few months and since I don't have a lot to do, I've enjoyed finding interesting frequencies here in this newsgroup.

Thanks.

George Ann, who was half way through being a sexagenarian before she realized it didn't mean what she thought it did!

Robert:

Would there be any way of calculating which part of the frequency
spectrum would pay a penaly by adding the 46Mhz element to the RS
Discone antenna?

I was on the verge of modifying mine but i dont want to loose UHF
frequency capabilities.

I am a bit new to scanning and was wondering if the Uniden TruckTracker feature on the BC235-XLT was very usefull? Would it be better to go with this scanner insted of a used AOR-1000 or something of equal price? (250-300 usd) Thanks in advance, suggest stuff to me, and if you are selling a scanner, tell me as well :)

Do all scanners still pick up portable phones? I would use that a lot...

The Fire Department stopped using codes in their dispatch...

As for the Police...you can find a complete listing in Police Call, in the back of the book...and also Monitor America (3rd Edition), I would like to send you the codes, but that would take almost all day to complete.

Good luck,
Jeff.

Chances are that they are old techs who had calls issued long before
the current system. The window for Vanity calls for Techs has not yet
opened. I've seen techs with 1x2 call signs, such as W7xx. They just
never upgraded since they got the original call.

From: n9mxt@aol.com
Message-ID: <19970831150700.LAA03828@ladder01.news.aol.com>
Source record: 187672

Question can you make the PRO-2006 computer controlled?? I used to own a AOR-3000 and their used to be software allowing the computer to link to the scanner. Once, you went into scan and you hit a signal it would lock on and upload the data to the computer storeing the FREQ and date/time stamping it. Can this be done on a 2006??

What kinda of mods are there and accessoriess are available for the 2006??

Please let me know.... and thanks for your time.

The last person whose word I would take is a Radio Shack salesman's.
You must worry about lightning always, everywhere. Your antenna mast
should be well grounded. Radio Shack sells grounding rods. Buy one,
two or three and pound them into the ground. Connect them with copper
wire to your antenna mast. Note that you will still have to unplug
your antenna from the radio before a storm. Coincidentally, an
approiaching storm front may produce good skip. It's a good idea to
also unplug computers, modems and other appliances. While the chances
of being struck by lightning are slim, the chance of you or a piece of
equipment surviving a lightning strike is zero. The salesman is a
dork.

>Bullshit, I am rarely on rec.radio.cb, YOU are the one who flames
>here & on rec.radio.cb.

Sorry to burst your bubble, John, but I just did a Dejanews search on your posts in rec.radio.cb from 1/1/97 to 8/31/97, and I think you are stretching the truth a bit. Of the 37 posts shown by the Dejanews server for your E-mail address during that time frame, 30 of the posts were published in rec.radio.cb, and several of the posts involved flaming wars with Eric Oyen.

>hang around, maybe you'll learn some more.

What more do we need to know about you, John? You've accused KC7DIU of not telling the truth as well as not behaving like an adult, but yet your previous posts reveal (in my opinion) that you are guilty of the same indiscretions as KC7DIU.

5318. McLean Country, IL - EF Johnson LTR

Source record: 187681

I recently purchased a Uniden BC235XLT Trunk Tracker. The system I want to monitor, McLean County, IL uses an EF Johnson LTR System and Motorola radios.

I hear electronic pops and other background noise almost continuously. If I use the Trunk mode, I don't hear anything at all - no pops, no background nois, no traffic.

Any ideas?

I am considering the purchase of a BC9000. I would greatly appreciate any feedback from those who are currently using this unit.

Concerning the alpha display, can someone tell me how many characters the display will allow? Also, what type of antenna connector is on the back.

Thanks very much!

Possible but very unlikely. Both QRZ & UALR provide upgrade info when someone changes calls. If you enter in an old call, they will give you the current call of the person. If you want to test that, try running the call W0AXE. An error would have had to occur for your idea to be true.

Hello Jeremy.

The BC235 and AOR-1000 are kind of like apples and oranges. If you live in an area that has a lot of Motorola Trunked Systems, then the BC235 is likely the way you will want to go. The AOR will not "track" a trunked system. If you are looking for a basic scanner with no real interest in the trunked feature, then the AOR would be a good radio to consider, along with the BC3000 handheld.

You asked if the Trunk Tracker feature was useful. Again, if you live in an area where 800MHz trunk systems are used, it is darn near a must!

Happy scanning

Ron,

I just bought a Pro-60 on sale for $199.00 at Radio Shack. I like it!
Especially for the extended coverage it offers and the Military aircraft
band. The new ones don't offer these features. It also has 200
channels, limit searching, triple conversion, etc. I'm sure you checked
out the specs. Anyway, I was looking just like you, and 3 people
recommended the same scanner; the pro-60.

Good luck!

John,

The Uniden Trunk Tracker only follows 800 Mhz MOTOROLA trunked radio
systems. You stated that McLeon County was an LTR system. The Trunk
Tracker won't work with that system.

There is however a decoder for EF Johnson LTR systems manufactured by
Connect Systems Inc. of Ventura CA. It's called the LT-2. Their web
site is http://www.connectsystems.com

This unit displays the home channel and group that is using the
frequency that you are tuned to. There is an RS-232 port on the rear
of the LT-2 so it can communicate with a PC. As far as I know,
ScanStar industrial is the only commercially available software that
can use the LT-2 to follow LTR systems.

Hope this helps,

Joe

There is an RS-232

Hi Jonathan....

Years ago I read about an incident in Austria, (this is well prior to
their entry in the EC) where someone with a scanner heard a transmission
from a portable radio belonging to a member of the forestry service that
was stranded in the mountains and needed rescue. Apparently no one else
was hearing these transmissions, and by their nature, this individual
felt that authorities had to be notified, which was done and rescue was
effected. But apparently, the PTT took exception to this and attemped
legal action in the courts against this individual for having receiving
apparatus not authorized under Austrian law. The courts rejected the PTT
motion out of hand as uncalled for, but only after the individual
involved had spent a considerable sum in legal expenses. I guess it
remains to be seen how such issues will be worked out under EC
harmonization. If some one purchases a scanner in the Netherlands and
takes it home to Germany where some might deem it as being "verboten,"
and the authorities challenged it use there, could one argue sucessfully
before the bench, "well it's bloody legal in that corner of the EC, so
why shouldn't it be legal in this corner?" One might reason now that the
"grenze" is open between the two countries that there is an assumption
that anything legally purchased in one country is legal in the other and
border controls are redundant because each country assumes that the
national authority of the other EC partners regulates trade to the extent
that no products deemed injurious to the national interests of any EC
state are legally available in the entire EC realm. I'd probably use that
argument if I was a "rechtsanwalt" defending a scanner owner standing in
the well of a German court.

.........Fred

Not really. The goverment is a criminal organization. They are the muscle
of the government. Criminals...

How 'bout them good ole cops and the fire hoses and German shepards? I bet
those were fine, upstanding individuals, too.

5345. AR8000 RS232 Command Syntax ?

Newsgroup: rec.radio.scanner
Date: 1997-08-31 00:00:00 UTC
From: PorterKR@ix.netcom.com
Message-ID: <3409012b.31751736@206.214.99.5>
Source record: 187735

I have started to develop a scanner control program for the AR8000 that runs under WINNT40. I have picked up a little (very little) information regarding the RS232 commands. I have figured out the basics, but am looking for the most detailed information available to ensure that I am programming the features in the most efficient manner possible. Any direct help, or help in finding sources would be appreciated. Preferably free, but If I have to purchase a manual somewhere I probably will (if I new of a COMPREHENSIVE one)

5346. Huge over 9GB Hard Disk: Trade for scanner....

Newsgroup: rec.radio.scanner
Date: 1997-08-31 00:00:00 UTC

Huge over 9GB Hard Disk: Trade for scanner....
I am lookin for a trade. I want an AR8000, or MVT9000. The scanner *must*
be mint-mint as new. I have a new Micropolis 9.1GB SCSI-2 Wide/Fast model
1991W hard disk. The disk lists for $1495, and goes on the street for
around $600+ to $800+.

This unit is *brand new*. It was purchased for a project that never got off
the ground. Total power up time was under 10 hrs. This is the "wide"
version meaning it tranfers over 20 MB a second. Fast SCSI-2 interface.

Serious inquiries only to: dalton@teleport.com

This IS going to happen in the US. Maybe now that scanner owners rights are under fire you can pay serious attention to the patriot movement in the US.

I recently left an engineering job working for a contractor specializing in surveillance/counter-surveillance electronics for our govt. I would like to know who our govt thinks is the enemy. The media pins the 'paranoia' tag on the militia groups, but the militias pale in comparison to our govt's paranoia against its own citizens.

Scanner rights are our least worries...

Andy

John, you've been spending entirely too much time online and not enough time on the air with your amateur buddies. I know of at least two ham operators in the city where I live who are only Technician class who have vanity callsigns, so either they are bootleggers or the FCC has recently made a change in the rules which govern amateur radio that you're not aware of. I don't see how these operators could be bootleggers, however--when I enter their callsigns on a QRZ database search, their correct name and address is returned by the QRZ server.

>> Just last weekend I heard a group of general and advanced class operators
>> on 7258.5 kHz LSB between 22:00 and 23:30 UTC jamming each other, using
>> profanity, playing music on the air, etc., etc.

>If is was late there is nothing wrong with swearing according to current
>interpretation by the FCC.

Again, you have been spending too much time online, John, and not enough time on air with your amateur buddies. Depending on which time zone one is located in, 22:00 UTC is between 2 and 5 PM local time, which is hardly late enough in the day for amateurs on 40 meters to be using profanity on air. Besides, I thought amateur operators were supposed to be setting the

example for how other radio operators, i.e. CB'ers, are supposed to behave on air. There's really no excuse for ANY radio operator to be using foul language on air when there are other words which will convey the same meaning. As you said in one of your earlier posts, John, "stick around, you might learn something."

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Federal government and military aviation have long been passions of mine when it comes to monitoring as those of you who have read my writings in the hobbyist press know. Over the years I've been involved in the utility radio monitoring hobby, I've built quite a collection of information. I refuse to allow the information I've assembled to just die quietly and I am determined to get this information into as many hands as possible before sharing it becomes illegal as it will when HR 2369 is enacted. I've spent the past several weeks getting the information in a manageable form and I am now ready to make it available to you. It's not fancy, there's no pretty fonts or formatting, but if you've been looking for one last opportunity to acquire a general frequency guide, this might be it.

WHAT YOU WILL RECEIVE: Nothing but frequencies and the user or users or purpose for its use. No filler. No long-winded rambling. Just frequencies sorted in ascending order and related information covering the federal government and military. Nearly 3,000 frequencies. Most of them gathered in the past four years from a wide variety of very public sources. Frequency range covered includes VHF-lo, VHF high and UHF up to 420 Mhz. Because I was gathering information for my own use here in the northeastern US, much of the data has a northeastern flavor to it. The information does reflect my own eclectic tastes which tends to favor law enforcement and military air from around the US. You will receive via first class mail 72 pages of single spaced information printed on 8.5 X 11 sheets of paper. No electronic version of this information will be available.

HOW TO GET THIS INFORMATION: Send money order or cash in the amount of $69.00 US along with your name and address to:

Jim Lawrence
P.O. Box 314
Montpelier, Vermont
USPS postal code: 05601

No personal checks please. Postage and handling costs are included in the price. To insure your privacy, once your order is filled, no record of your purchase will be maintained by me longer than 60 days following shipment. No refunds will be given; all sales are final.

This offer may be withdrawn at any time for any reason and will absolutely end when President Clinton signs the bill into law.

There's rec.scanner.flamefest or some such thing, which is what got this whole thing started. The jerk who started this thread decided to tell people whom he knows nothing about what to say and behave. Of course, he's proven that he's just as bad as everyone else (actually worst because those other guys occasionally have something to say about scanners whereas the jerk has nothing to say about nothing, especially scanners of which he is clueless. Come to think of it, the guy who started the rec.scanner.flamefest newsgroup was the sort of person. Maybe he's back...

It was a good and fair post. It won't change my mind about open broadcasting, but the quality of his response was in that he didn't intend to. :)

In any event, I wonder why I didn't see this posting until you quoted and posted it. And, why, suddenly, this thread is suddenly a part of something "alt.fan.rush.limbaugh". I'll have to check my reader...something is amiss.

Dave

Here is what I have in the '97 Police Call Plus (c), Which
can Be found at any local Radio Shack...
All Freqs. have the callsign of "KIC268".
Police:
155.190Mhz, 453.800Mhz, 460.200Mhz, 460.375Mhz.
Also have a frequency of 453.100Mhz callsign "KNAL539" for
Elizabeth City State University.
Don't know what freqs are active...You gotta figure that
part of it on your own, That's 90% of the fun!!
